

HIGH PERFORMANCE RELAYS, CONTACTORS, SOLENOIDS AND POWER DISTRIBUTION UNITS

Relays, Contactors, Solenoids, and Power Distribution

TE Connectivity (TE) high-performance relays, contactors and switches are designed specifically to operate in extremely rigorous environments in military and aerospace applications. Our relay products include COTS (commercial off-the-shelf), Mil-Spec, plus highly specialized, and custom-designed products. These high-performance products are designed to withstand extreme shock, vibration, temperature and altitude.

Brands You Trust

Among our portfolio are some of the more respected brands in the high performance switching industry:

- **CII** military and aerospace relays, sensors and custom solenoids
- **HARTMAN** aerospace power relays, contactors, sensors and power distribution units
- **KILOVAC** high voltage relays, contactors, protective relays and power distribution units

This brochure provides an overview of our product line. It includes products with switching capabilities from dry circuit up through 1000 A. Some relays are capable of switching up to 6 GHz signals, while others can handle voltages up to 70 kV. Other types combine solid-state circuits with electromechanical or solid state outputs to create timers, sensors, monitors and controllers. And they are specifically designed for operation in extremes of temperature, shock, vibration and altitude.

Relays

TE's high-performance relays are designed to perform reliably in extremely rigorous environments in military and aerospace applications. Our balanced force design provides the benefits of consistently high contact pressure, reduced bounce and less arching, helping to lead to extended contact life.

Contactors

TE delivers the switching performance demanded by aerospace and defense applications with our light-weight contactors, which offer continuous current ratings up to 1000 A and voltages up to 1800 VDC in very compact, sealed packages.

Solenoids

Our solenoids are also designed and manufactured on a custom basis to precisely meet your demanding high-performance actuation requirements. We offer a broad range of coil, termination and plunger options, and push, pull and combination motion is available.

Power Distribution

HARTMAN AC and DC power distribution units (PDUs) and KILOVAC HVDC PDUs are designed, built and qualified to meet your specific requirements, serving the commercial and military industries.

Global Contacts

LET'S CONNECT

Introduction

Section 1

Low Signal Relays

CII brand low signal electromechanical relays are designed and built to perform under the most demanding environmental conditions in military, aerospace and commercial applications. Relays are rated from signal level up to 10 amps switching in a variety of package sizes, mounting configurations, and termination options. There are both non-latching and latching designs. Standard, bifilar, and sensitive coils are available with optional diode suppression. Relays are qualified to MIL-PRF-39016, MIL-R-5757, MIL-PRF-28776, MS27245, and MS27247.

Section 2

High Frequency, Low Signal Relays

TE MW Series relays are noted for their improved signal repeatability and RF switching capabilities to the 6 GHz microwave range in a hermetically sealed, subminiature package. Excellent signal isolation, stable insertion loss, and low VSWR are provided. Standard versions are available for applications ranging from wireless communications to precision high-speed test equipment. High performance versions are available for even more demanding environmental conditions.

Section 3

High Vibration Relays

TE High Vibration MAV and MSV Series TO-5 relays are designed to withstand vibration levels to 380 G's at 200 Hz. The small footprint and low profile offer the customer considerable space savings and permits high density packaging without sacrificing quality performance. Relays are available as standard or sensitive with a variety of coil voltages. The high shock and vibration ratings of MAV and MSV series make them well suited for the rigorous demands of military and aerospace usage.

Section 4

High Reliability Relays and Contactors for Space Applications

TE offers a variety of relay solutions for hi-reliability and space environments. Our space products begin as relays manufactured to established QPL mil specs, then receiving additional processing and testing tailored to the customer's specific application needs.

Clean room construction, highly controlled processes, tracking and serialization of data, quality audits throughout the manufacturing cycle, along with extensive product testing, assure our customers that their hi-reliability standards and requirements will be met or exceeded.

Section 5

Mid-Range Relays

TE CII brand Mid-range relays offer critical size and weight savings in aircraft applications by providing efficient power switching in a compact package. Relays vary in size from the compact 5 amp package all the way up to a 50 amp version in a 1 inch cube enclosure.

Our balanced force design provides the benefit of consistently high contact pressure, reduced bounce, and less arching leading to extended contact life. A variety of coil options are available which allow the AC or DC control.

Terminal styles include socket pins, solder pins, and solder hooks. Each series comes with a variety of mounting options. Relays are qualified to MIL-PRF-6106 and MIL-PRF-83536.

Section 6

Lightweight AC and DC Contactors/Relays and Sensing Devices

TE offers some of the lightest, smallest and most efficient AC and DC contactors available today for aerospace commercial and military electrical power systems. These contactors are available in multiple contact configurations, current/voltage ratings, auxiliary contact configurations, and mounting styles.

TE prides itself in having the technical experience, knowledge and ability to offer their customers products that meet and exceed their demanding requirements.

HARTMAN AC and DC contactors are light weight and environmentally (gasket) sealed. Hermetically sealed enclosures are available for the most severe environmental conditions or altitudes above 50,000 feet. Multiple main contact configurations and auxiliary contact configurations are available. AC and DC contactors are designed to meet the applicable requirements of MIL-PRF-6106 and/or specific customer specifications.

TE also has Sensing and Protective Devices available with various functions, including current monitoring, reverse current protection, over/under voltage protection, over/under frequency protection, automatic drop-out for starting applications and three-phase remote power controllers with various over current trip functions.

TE offers HARTMAN brand products that are designed for use in the Space Industry. The N-Series relays offer highly reliable switching for 115 Volt AC and 28 Vdc circuits. These units are available with multiple contact configurations, latching or non-latching operating modes, and with current ratings up to 100 amperes and are designed to meet the requirements of MIL-PRF-6106. Because they are ITAR restricted, they are not shown in this catalog.

Introduction (Continued)

Section 7

Lightweight DC Relays and Contactors

TE KILOVAC DC contactors deliver the switching performance demanded by aerospace and defense applications. These lightweight contactors offer continuous current ratings up to 500 amps at 900 Volts DC in very compact packages. Standard and customized individual contactors are available, as well as custom-designed, fully-qualified main power and high voltage distribution assemblies.

Section 8

Time Delay Relays

Our broad line of time delay relays includes delay-on-operate, fixed and adjustable; delay-on-release, fixed & adjustable; and interval timers with relay or solid state outputs. All are hermetically sealed with a variety of package & mounting configurations. Contact ratings range from 2 to 10A, with MIL qualification on 10A versions. Also available are MIL approved subminiature digital timing modules.

Section 9

Sensors

Our versatile line of sensors includes AC & DC voltage sensors, and AC frequency and phase sensors. All are hermetically sealed, with a variety of mounting options, and relay contact outputs.

Section 10

Solid State Relays

The product line includes both AC and DC versions, with output ratings up to 25A. AC relays rated at 2A, 10A, & 25A feature zero voltage turn-on for reduced EMI. DC relays are offered with ratings up to 2A in several miniature hermetically sealed package configurations, some with optional isolated status lines and/or short circuit protection.

Section 11

Protective Relays

TE Protective Relays are designed and manufactured in compliance with UL, CSA, IEEE, military and customer specifications. These relays are in use on applications such as portable generators, automatic transfer switches, irrigation pumps, refineries, oil fields, aircraft, ships and nuclear submarines. A long list of TE protective relays are fully qualified by the military for use in ground support equipment, aircraft and Navy ships high-shock applications. These are managed in the DOD supply system under NSN classes 5945 and 6110.

Section 12

Specialty Relays

TE AGASTAT brand relays feature unmatched accuracy and reliability in a pneumatic timer. Representing over 50 years of research and development in this specialized field, TE AGASTAT brand relays offer unprecedented economy and reliability under severe operating conditions. Voltages range from 6 to 550 VAC/VDC and timing ranges from 0.1 seconds to 60 minutes.

Relays are available in off and on delay models as commercial and nuclear qualified. A broad line of general purpose, time delay, and magnetic latching control relays are also offered.

In addition to our AGASTAT brand relays, TE MDR rotary relays provide good durability and excellent resistance to shock and vibration in specialized applications. Relays are rated up to 10 amps switching, 4 to 24 poles, latching option, and are available in 2 sizes (2-1/2 and 4 inch diameters). MDR relays are also offered as commercial grade.

Section 13

Solenoids

Our solenoids are designed and manufactured on a custom basis to precisely meet your demanding high performance actuation requirements.

Section 14

Power Distribution Units

TE HARTMAN AC and DC power distribution units (PDUs) and KILOVAC DC PDUs are designed, built and qualified to meet your specific requirements serving both the commercial and military industries.

Allow us to apply our significant expertise in integrating bus-bar and plug-in contactors, relays, sensors, monitors, circuit breakers, shunts, generator control units and other components into compact, lightweight power distribution units.

Section 15

Sensors

TE offers a growing range of sensors for military and aerospace needs. We will work with you to understand the custom requirements of your application. Our goal is to design, manufacture, and deliver superior solutions with uncompromising accuracy, robustness, and reliability.

Product Facts

- Suppression & protection diodes
- Hermetically sealed
- High shock & vibration ratings
- Spreader pad
- Excellent RF switching

Electrical Characteristics

Contact Arrangement — 1 Form C (SPDT)

Contact Material — Stationary — Gold/platinum/palladium/silver alloy (gold plated) Moveable — Gold/platinum/palladium/silver alloy (gold plated)

Contact Resistance — Before Life — 100 milliohms max. (measured @ 10 mA @ 6 Vdc) After Life — 200 milliohms max. (measured @ 1 A @ 28 Vdc)

Mechanical Life Expectancy — 1 million operations

Coil Voltage — 5 to 26.5 Vdc

Coil Power — 512 mW max. @ 25°C

Duty Cycle — Continuous

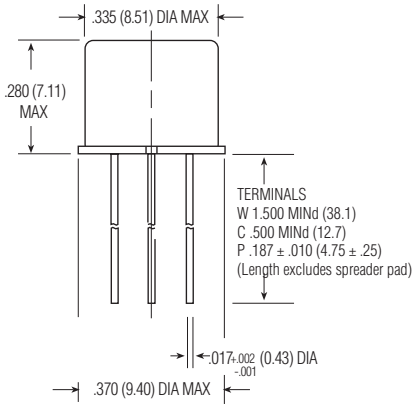

Pick-up Voltage — Approximately 50% of nominal coil voltage

Pick-up Sensitivity — 100 mW max. @ 25°C

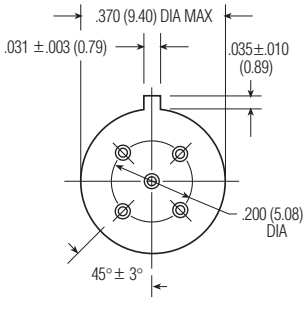

Contact Ratings

Contact Load	Type	Operations MINd.
1.0 A @ 28 Vdc	Resistive	100,000
250 mA @ 115 Vac, 60 Hz & 400 Hz	Resistive (case not grounded)	100,000
100 mA @ 115 Vac, 60 Hz & 400 Hz	Resistive	100,000
0.2 A @ 28 Vdc	Inductive (0.32 Henry)	100,000
0.1 A @ 28 Vdc	Lamp	100,000
30 µA @ 50 mVdc	Low Level	1,000,000
0.1 A @ 28 Vdc	Intermediate Current	50,000

1MA/1MAD/1MADD Enclosure

1MA/1MAD/1MADD Header

Single Pole, Electrically Held, 1 Amp and Less (Continued)

1MA, 1MAD, 1MADD
(Continued)

Operating Characteristics

Timing —
Operate Time — 2.0 ms max.
Release Time —
1MA — 2.0 ms max.
1MAD/1MADD — 4.0 ms max.
(suppression diode, suppression/ steering diodes)

Contact Bounce — 1.5 ms max

Dielectric Withstanding Voltage —
Between Open Contacts — 500 Vrms 60 Hz
Between Adjacent Contacts — 500 Vrms 60 Hz
Between Contacts & Coil — 500 Vrms 60 Hz

Insulation Resistance —
10,000 megohms @ 500 Vdc
1,000 megohms @ 500 Vdc (coil to case @ +125°C)

Environmental Characteristics

Temperature Range —
-65°C to +125°C

Weight —
0.08 oz. (2.27 grms)
0.09 oz. (2.52 grms) with spreader pad attached

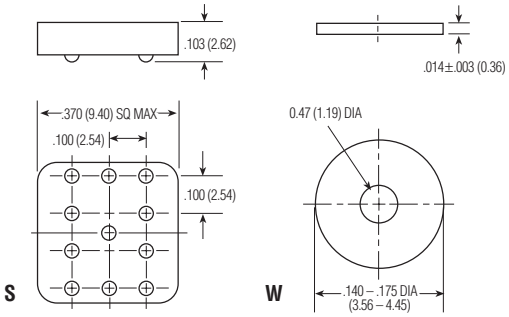

Vibration Resistance —
30 G's, 10 to 3,000 Hz

Shock Resistance —
75 G's, 6 ±1 ms max.

QPL Approval —
MIL-R-39016/7 (J1MA)
MIL-R-39016/23 (J1MAD)
MIL-R-39016/24 (J1MADD)

Semiconductor Characteristics

Diode —
100 Vdc peak inverse voltage (PIV)
1.0 Vdc max. transient voltage

Spreader & Mounting Pads

Notes: 1. Coil resistance not directly measurable. Coil current should be within limits shown when tested at nominal voltage at 25°C for 5 seconds max.
2. Set base current at 3 mA to 15 mA during measurements.

Ordering Instructions

Catalog-selected Relays: The catalog number is derived by choosing the proper CODE for each of the relay characteristics in the order in which the codes are listed.

Specifying a Part Number Example*:	Type	Terminal	Diodes	Coils	Spreader/Mounting Pads
	1MA	C	D	-26	S

* The part number example shown on this page is for catalog items. For a list of specific QPL part numbers, please see the index in Section 15.

Notes: 1. Coil resistance not directly measurable. Coil current should be within limits shown when tested at nominal voltage at 25°C for 5 seconds max.
2. Set base current at 3 mA to 15 mA during measurements.

Ordering Instructions

Catalog-selected Relays: The catalog number is derived by choosing the proper CODE for each of the relay characteristics in the order in which the codes are listed.

Specifying a Part Number Example:	Type	Terminal	Diodes	Coils	Spreader/Mounting Pads
	1MS	C	T	-26	S

* The part number example shown on this page is for catalog items. For a list of specific QPL part numbers, please see the index in Section 15.

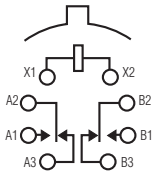

Double Pole, Electrically Held, 1 Amp and Less

MA, MAD, MADD

MA

Standard TO-5 High Performance Relay

Qualified to MIL-R-39016/9

Terminal View

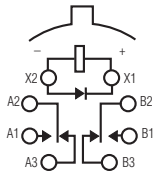

Product Facts

- Hermetically sealed
- High shock & vibration ratings
- Spreader pads
- Excellent RF switching

MAD

Standard TO-5 Diode Suppressed High Performance Relay

Qualified to MIL-R-39016/15

Terminal View

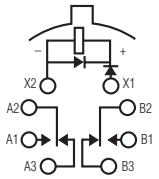

Product Facts

- Suppression diode
- Hermetically sealed
- High shock & vibration ratings
- Spreader pads
- Excellent RF switching

MADD

Standard TO-5 Diode Suppressed/Protected High Performance Relay

Qualified to MIL-R-39016/20

Terminal View

Product Facts

- Suppression & protection diodes
- Hermetically sealed
- High shock & vibration ratings
- Spreader pads
- Excellent RF switching

Electrical Characteristics

Contact Arrangement — 2 Form C (DPDT)

Contact Material — Stationary — Gold/platinum/palladium/silver alloy (gold plated) Moveable — Gold/platinum/palladium/silver alloy (gold plated)

Contact Resistance — Before Life — 100 milliohms max. (measured @ 10 mA @ 6 Vdc) After Life — 200 milliohms max. (measured @ 1 A @ 28 Vdc)

Mechanical Life Expectancy — 1 million operations

Coil Voltage — 5 to 30 Vdc (MA/MAD) 5 to 26.5 Vdc (MADD)

Coil Power — 675 mW max. @ 25°C

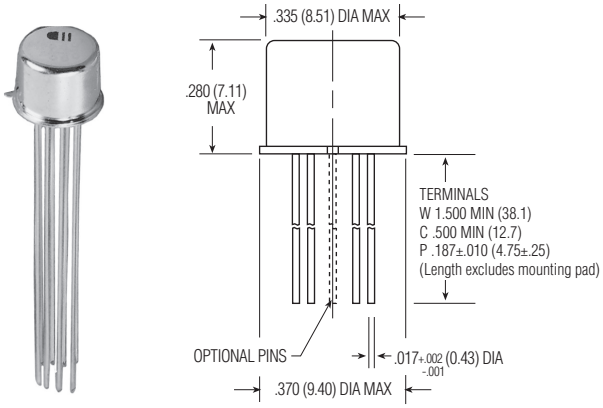

Duty Cycle — Continuous

Pick-up Voltage — Approximately 50% of nominal coil voltage

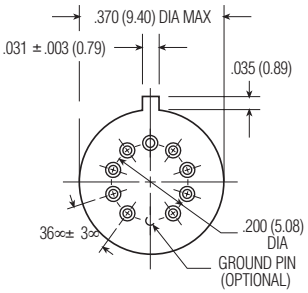

Pick-up Sensitivity — 130 mW max. @ 25°C

Contact Ratings

Contact Load	Type	Operations Min.
1.0 A @ 28 Vdc	Resistive	100,000
250 mA @ 115 Vac, 60 Hz & 400 Hz	Resistive (case not grounded)	100,000
100 mA @ 115 Vac, 60 Hz & 400 Hz	Resistive	100,000
0.2 A @ 28 Vdc	Inductive (0.32 Henry)	100,000
0.1 A @ 28 Vdc	Lamp	100,000
30 µA @ 50 mVdc	Low Level	1,000,000
0.1 A @ 28 Vdc	Intermediate Current	50,000

Ordering Instructions

Catalog-selected Relays: The catalog number is derived by choosing the proper CODE for each of the relay characteristics in the order in which the codes are listed.

Specifying a Part Number Example:	Type	Terminals	Diodes	Ground Pins	Coils	Mounting Pads
	MGA	C	D	G	-26	W

* The part number example shown on this page is for catalog items. For a list of specific QPL part numbers, please see the index in Section 15.

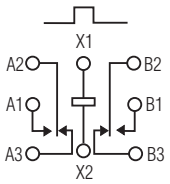

Double Pole, Electrically Held, 1 Amp and Less (Continued)

MGS, MGSD, MGSDD

MGS

Sensitive .100 Grid High Performance Relay

Qualified to MIL-R-39016/41

Terminal View

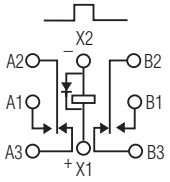

Product Facts

- Hermetically sealed
- High shock & vibration ratings
- Mounting pads
- Excellent RF switching

MGSD

Sensitive .100 Grid Diode Suppressed High Performance Relay

Qualified to MIL-R-39016/42

Terminal View

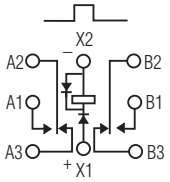

Product Facts

- Suppression diode
- Hermetically sealed
- High shock & vibration ratings
- Mounting pads
- Excellent RF switching

MGSDD

Sensitive .100 Grid Diode Suppressed/Protected High Performance Relay

Qualified to MIL-R-39016/43

Terminal View

Product Facts

- Suppression & protection diodes
- Hermetically sealed
- High shock & vibration ratings
- Mounting pads
- Excellent RF switching

Electrical Characteristics

Contact Arrangement — 2 Form C (DPDT)

Contact Material — Stationary — Gold/platinum/palladium/silver (gold plated) Moveable — Gold/platinum/palladium/silver (gold plated)

Contact Resistance — Before Life — 100 milliohms max. (measured @ 10 mA @ 6 Vdc) After Life — 200 milliohms max. (measured @ 1 A @ 28 Vdc)

Mechanical Life Expectancy — 1 million operations

Coil Voltage — 5 to 48 Vdc

Coil Power — 565 mW max. @ 25°C

Duty Cycle — Continuous

Pick-up Voltage — Approximately 50% of nominal coil voltage

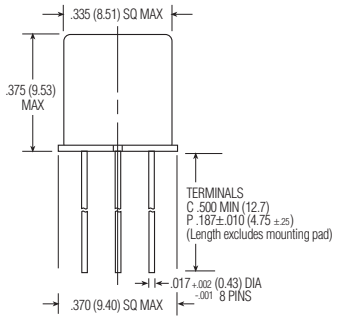

Pick-up Sensitivity — 60 mW max. @ 25°C

Contact Ratings

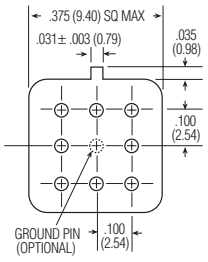

Contact Load	Type	Operations Min.
1.0 A @ 28 Vdc	Resistive	100,000
250 mA @ 115 Vac, 60 Hz & 400 Hz	Resistive (case not grounded)	100,000
100 mA @ 115 Vac, 60 Hz & 400 Hz	Resistive	100,000
0.2 A @ 28 Vdc	Inductive (0.32 Henry)	100,000
0.1 A @ 28 Vdc	Lamp	100,000
30 µA @ 50 mVdc	Low Level	1,000,000
0.1 A @ 28 Vdc	Intermediate Current	50,000

Operating Characteristics

Timing —
Operate Time — 4.0 ms max.
Release Time —
MGS — 2.0 ms max.
MGSD/MGSDD — 7.5 ms max.
(suppression diode, protection/ suppression diodes)

Contact Bounce — 1.5 ms max.

Dielectric Withstanding Voltage — Between Open Contacts — 500 Vrms 60 Hz
Between Adjacent Contacts — 500 Vrms 60 Hz
Between Contacts & Coil — 500 Vrms 60 Hz

Insulation Resistance —
10,000 megohms min. @ 500 Vdc
1,000 megohms @ 500 Vdc
(coil to case @ +125°C)

Environmental Characteristics

Temperature Range —
-65°C to +125°C

Weight —
0.09 oz. (2.55 gms)
0.129 oz. (3.45 gms) w/ mounting pad attached

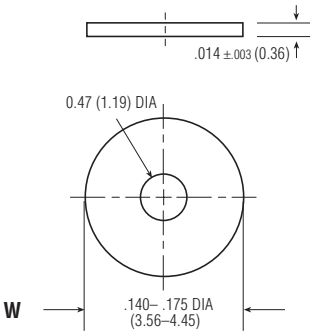

Vibration Resistance —
30 G's, 10 to 3,000 Hz

Shock Resistance —
75 G's, 6 ±1 ms max.

QPL Approval —
MIL-R-39016/41 (JMGS)
MIL-R-39016/42 (JMGSD)
MIL-R-39016/43 (JMGSDD)

Semiconductor Characteristics

Diode —
100 Vdc peak inverse voltage (PIV)
1.0 Vdc max. transient voltage

Product Facts

- **MOSFET driver, zener & suppression diodes**
- **Hermetically sealed**
- **High shock & vibration ratings**
- **Mounting pads**
- **Excellent RF switching**

Electrical Characteristics

Contact Arrangement — 2 Form C (DPDT)

Contact Material — Stationary — Gold/platinum/palladium/silver (gold plated) Moveable — Gold/platinum/palladium/silver (gold plated)

Contact Resistance — Before Life — 100 milliohms max. (measured @ 10 mA @ 6 Vdc) After Life — 200 milliohms max. (measured @ 1 A @ 28 Vdc)

Mechanical Life Expectancy — 1 million operations

Coil Voltage — 5 to 26.5 Vdc

Coil Power — 660 mW max. @ 25°C

Duty Cycle — Continuous

Pick-up Voltage — Approximately 50% of nominal coil voltage

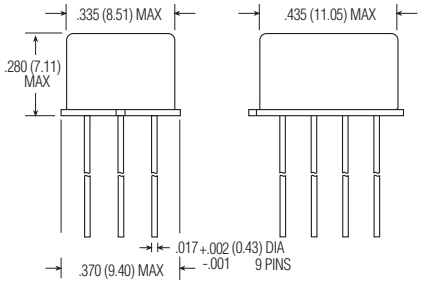

Pick-up Sensitivity — 130 mW max. @ 25°C

Contact Ratings

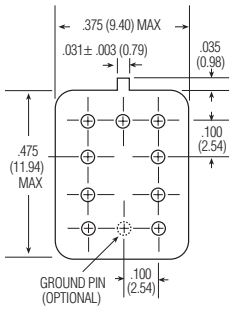

Contact Load	Type	Operations Min.
1.0 A @ 28 Vdc	Resistive	100,000
250 mA @ 115 Vac, 60 Hz & 400 Hz	Resistive (case not grounded)	100,000
100 mA @ 115 Vac, 60 Hz & 400 Hz	Resistive	100,000
0.2 A @ 28 Vdc	Inductive (0.32 Henry)	100,000
0.1 A @ 28 Vdc	Lamp	100,000
30 µA @ 50 mVdc	Low Level	1,000,000
0.1 A @ 28 Vdc	Intermediate Current	50,000

MGAT

MGAT Enclosure

MGAT Header

Double Pole, Electrically Held, 1 Amp and Less (Continued)

MGAT (Continued)

Operating Characteristics

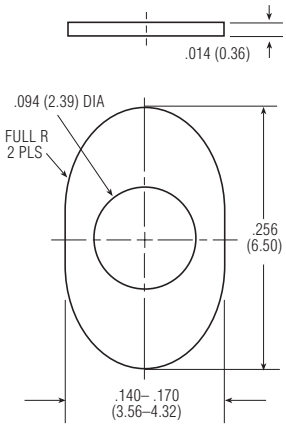

Timing —
Operate Time — 2.0 ms max.
Contact Bounce — 1.5 ms max.
Dielectric Withstanding Voltage — Between Open Contacts — 500 Vrms 60 Hz
Between Adjacent Contacts — 500 Vrms 60 Hz
Between Contacts & Coil — 500 Vrms 60 Hz
Insulation Resistance —
10,000 megohms min. @ 500 Vdc
1,000 megohms @ 500 Vdc (coil to case @ +125°C)

Environmental Characteristics

Temperature Range —
-65°C to +125°C
Weight —
0.09 oz. (2.55 gms)
0.129 oz. (3.45 gms) w/ mounting pad attached
Vibration Resistance —
30 G's, 10 to 3,000 Hz
Shock Resistance —
75 G's, 6 ±1 ms max.
QPL Approval —
MIL-R-28776/6 (JMGAT)

Semiconductor Characteristics

Diode —
100 Vdc peak inverse voltage (PIV)
1.0 Vdc max. transient voltage
Zener Diode —
20 Vdc ±3 Vdc over temperature range
MOSFET —
0.5 Vdc min. gate turn-off voltage
4.3 Vdc max. gate turn-on voltage

MGAT Mounting Pad

Coil Data

Nom. Coil Voltage (Vdc)	Coil Resistance in Ohms ±10% @ 25°C (Note)	Coil Circuit Current mA (Max.) (Note)	Coil Circuit Current mA (Min.) (Note)	Pickup Voltage Vdc (Max.) @ 25°C	Pickup Voltage Vdc (Max.) @ 125°C	Drop-Out Voltage Vdc (Min.) @ 25°C	Drop-Out Voltage Vdc (Min.) @ -65°C	Nom. Coil Power (mW) @ 25°C	Max. Coil Voltage	Coil Desig.
MGAT										
5.0	39	132.3	96.5	2.9	3.5	0.23	0.13	641	5.8	5
6.0	78	83.9	60.3	3.5	4.5	0.32	0.18	462	8.0	6
9.0	220	47.1	33.1	5.3	6.8	0.48	0.27	368	12.0	9
12.0	390	36.1	24.9	7.1	9.0	0.65	0.36	369	16.0	12
18.0	880	24.1	16.1	10.6	13.5	0.97	0.54	368	24.0	18
26.5	1,560	19.9	12.9	14.2	18.0	1.30	0.72	450	32.0	26

Note: Coil resistance not directly measurable. Coil current should be within limits shown when tested at nominal voltage at 25°C for 5 seconds max.

Ordering Instructions

Catalog-selected Relays: The catalog number is derived by choosing the proper CODE for each of the relay characteristics in the order in which the codes are listed.

Specifying a Part Number Example:

Type	Terminals	Diodes	Ground Pins	Coils	Mounting Pads
MGA	C	T	G	-26	W

* The part number example shown on this page is for catalog items. For a list of specific QPL part numbers, please see the index in Section 15.

Double Pole, Electrically Held, 2 Amps and Less (Continued)

Long-life Half size Industrial Relay

Type 3SCV (2PDT)

Product Facts

- **100,000,000 operations at low-level**
- **Hermetic seal**

The 3SCV is an exceptionally long life relay for low level applications which is designed for industrial applications such as business machines and computer peripheral equipment. The design is such that the phenomenon of sticking contacts is all but eliminated. Because of its low contact resistance and its ability to handle overloads the 3SCV relay is well suited for applications which have previously required reed devices.

Electrical Characteristics

Contacts — 2 Form C

Contact Resistance — 0.050 ohms; 0.100 ohms after life test

Life — 10^5-2A 28 volts DC, 115 volts AC (not grounded, resistive)
0.5A
Low-level — 100,000,000 operations — 50 µA at 50 mV Peak AC or DC

Sensitivity — 340 mW

Operating Characteristics

Operate Time — 6 ms max.

Release Time — 4 ms max.

Contact Bounce — 2 ms max.

Enclosure — All welded, hermetically sealed

Terminals — Weldable and solderable

Dielectric Strength — 500 volts rms at sea level

Insulation Resistance — 1,000 megohm min.

Environmental Characteristics

Weight — 0.30 oz.

Vibration — 10G, 10-2000 Hz

Shock — 50 G 6ms, 1/2 sine

Temperature — -14°C to +125°C

See page 1-39 for Mounting Forms, Terminals and Circuit Diagrams.

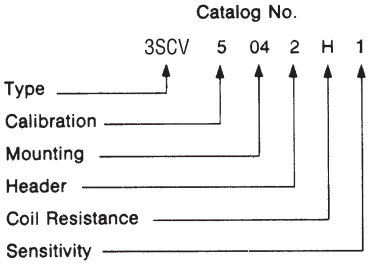

Coil Table (All Values DC)* 340 mW Sensitivity: (Code 1)

Ordering Instructions

Catalog-selected Relays: The catalog number is derived by choosing the proper CODE for each of the six relay characteristics in the order in which the codes are listed.

Example: The relay selected in this example is a 2PDT half size relay, voltage calibrated, two-hole side bracket mounting, solder hook header, 700 ohms coil resistance, and 340 mW sensitivity. By choosing the proper code for each of these relay characteristics, the catalog number is identified as 3SCV5042H1. The letter R following sensitivity code indicates relay received 5000 operation miss-test. Ex. 3SCV5042H1R.

.150 Grid-space Relays

Type 3SBC (2PDT) Standard

135 mW 2PDT
50 mW (Form AB)
1 PNC–1 PNO

Product Facts

- **Low profile… only 0.32 inches high**
- **Internal diode for coil transient suppression and transistor driven models available**
- **Qualified to MIL-R-39016/13**
- **RF designs available**

The .150 Grid-space relay — only 0.32 inches high — saves space in electronic packaging. The pin spacing allows you to insert the relay with no intermediate pin spreaders as well as meet applicable military specifications.

Electrical Characteristics

Contact Ratings —
DC resistive — 2 amps at 28 volts (50,000 operations)
1 Amp @ 28 V (100,000 operations)
DC inductive — 0.5 amps at 28 volts, 200 mH
AC resistive — 0.5 amps at 115 volts
AC — 0.125 amps at 115 volts (case grounded)
Low-level — 50 µA at 50 mV
Peak AC or DC

Contact Resistance —
0.050 ohms max.; 0.150 ohms after life test

Life — 100,000 operations at rated loads listed; 1,000,000 operations at low-level loads

Operating Characteristics

Operate Time — 4 ms max.

Release Time — 4 ms max.

Contact Bounce — 1.5 ms

Dielectric Strength —
500 volts rms at sea level;
350 volts rms at 70,000 feet and above

Insulation Resistance — 1,000 megohm min. over temperature range

Environmental Characteristics

Vibration — 30G, to 3000 Hz

Shock — 100 G at 11 ms

Temperature — -65°C to +125°C

See page 1-44 for Mounting Forms, Terminals and Circuit Diagrams.

Ordering Instructions

Example: The relay selected in the example is a FORM AB .150-grid relay, current calibrated, end bracket mounting with 0.13-inch solder hook header, 210 ohms coil resistance, and 50 mW sensitivity. By choosing the proper code for each of these relay characteristics, the catalog number is 3SBC6131E2. The letter R following sensitivity code indicates relay received 5000 operation miss-test. Ex. 3SBC6131E2R.

Note: Relays specified by catalog numbers (per above directions) are general use items controlled by catalog specifications. Relays to be controlled by customer drawings — or relays having requirements not covered in this publication — will be assigned special catalog numbers upon request.

* The part number example shown on this page is for catalog items. For a list of specific QPL part numbers, please see the index in Section 15.

Double Pole, Electrically Held, 2 Amps and Less (Continued)

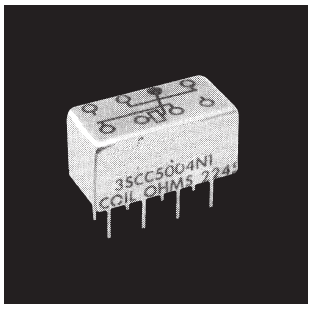

.150 Grid-space Long-life Relays

Type 3SCC (2PDT)

170 mW

Product Facts

- **100,000,000 operations low-level signal loads**
- **RF designs available**
- **Low profile — 0.32 height**
- **Hermetic seal**
- **High reliability**
- **Performance tested**

The .150 Grid relay, the smallest (.320 inches high) 2 Amp rated relay available in commercial and military qualified models, is now available in the long life version. Capable of over 100,000,000 mechanical operations at low level and signal load, the .150 Grid relay provides the simplicity of relays for circuit design, the low circuit resistance of precious metal contact systems, and the long life processing that has made CII relays the standard for quality and reliability.

Electrical Characteristics

Contact Ratings —
DC resistive — 2 amps at 28 volts (50,000 operations)
1 Amp @ 28 V (100,000 operations)
DC inductive — 0.5 amps at 28 volts, 200 mH
AC resistive — 0.5 amps at 115 volts
AC — 0.125 amps at 115 volts (case grounded)
Low-level — 50 µA at 50 mV
Peak AC or DC

Contact Resistance —
0.050 ohms max.; 0.150 ohms after life test

Life — 100,000 operations at rated loads listed; 1,000,000 operations at low-level loads

Operating Characteristics

Operate Time — 4 ms max.

Release Time — 4 ms max.

Contact Bounce — 1.5 ms

Dielectric Strength —
500 volts rms at sea level;
350 volts rms at 70,000 feet and above

Insulation Resistance — 1,000 megohm min. over temperature range

Environmental Characteristics

Vibration — 30G, to 3000 Hz

Shock — 100 G at 11 ms

Temperature — -40°C to +125°C

See page 1-44 for Mounting Forms, Terminals and Circuit Diagrams.

†Applicable over the operating temperature range in circulating air.

Ordering Instructions

Example: The relay selected in the example is a 2PDT .150-grid relay, current calibrated, end bracket mounting with 0.13-inch solder hook header, 210 ohms coil resistance, and 175 mW sensitivity. By choosing the proper code for each of these relay characteristics, the catalog number is 3SCC6131E1. The letter R following sensitivity code indicates relay received 5000 operation miss-test. Ex. 3SCC6131E1R.

Note: Relays specified by catalog numbers (per above directions) are general use items controlled by catalog specifications. Relays to be controlled by customer drawings — or relays having requirements not covered in this publication — will be assigned special catalog numbers upon request.

Crystal-Can Relays
Type 3SAE (2PDT)

Product Facts

- **Small lightweight crystal-can type**
- **0.25 cubic inch, 0.60 ounces**
- **Power or low-level switching**
- **20G to 2000 Hz vibration capability**

The TE Connectivity line of crystal-can relays is backed by years of experience and millions of relays operating in the field.

Electrical Characteristics

Contact Ratings —
DC resistive — 2 amps at 28 volts
DC inductive — 1 amp at 28 volts, L/R < .025
Low-level — 50 µA at 50 mV Peak AC or DC
AC resistive — 1.0 amp at 115 volts, case not grounded
AC resistive — 0.25 amps at 115 volts, case grounded

Contact Resistance —
0.050 ohms max. initial;
0.100 ohms max. after life test

Life — 100,000 operations at rated load; 1,000,000 at low-level

Operating Characteristics

Operate Time — 6 ms max.

Release Time — 5 ms max.

Contact Bounce — 2.5 ms

Dielectric Strength —
1,000 volts rms at sea level;
700 volts rms across contact gaps;
350 volts rms at 70,000 feet

Insulation Resistance —
1,000 megohm min. except coil to case 500 min. at 125°C

Environmental Characteristics

Vibration — Depends upon mounting forms

Shock — 50 G at 11 ms

Temperature — -65°C to +125°C

See page 1-46 for Mounting Forms, Terminals and Circuit Diagrams.

Double Pole, Magnetic Latching, 2 Amps and Less (Continued)

Magnetic Latching, Grid Space, Relay
Type 3SDM (2PDT)

Product Facts

- Suitable for pulse operation
- No hang up feature
- MIL-R-39016 type
- Special contact and coil wiring available

This magnetic latching relay maintains the high reliability attributes of the aerospace proven CII 3SAM relay family. By reducing the size of the coil and maintaining the contact system of the 3SAM, we can now offer a smaller 2 amp rated magnetic latching relay. The pulse operation can provide multiple hundred thousand operations in power saving circuits. The on or off circuits are maintained using no power until there is a need to switch the contacts. Suitable for matrix switches or relay trees, these versatile relays have contact systems capable of reliability switching high power or very low level signals in the same package. The relay's unique circuit prevents it from ever hanging up in an off-center or neutral position.

Electrical Characteristics

Contact Ratings —
DC resistive — 2 amps at 28 volts
Low-level — 50 µA at 50 mV DC or peak AC

Contact Resistance —
0.050 ohms initial;
0.100 ohms after life test (High level)
0.150 ohms after life test (Low level)

Life —
100,000 operations at rated load;
1,000,000 operations at low-level

Operating Characteristics

Operate Time — 4 ms

Reset Time — 4 ms

Contact Bounce — 2 ms

Dielectric Strength —
1,000 volts at sea level;
500 volts across contact gap and
500 volts coil to case

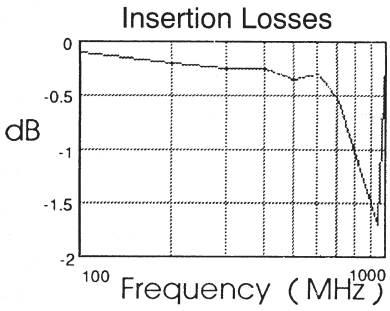

Insulation Resistance —
1,000 megohms min.

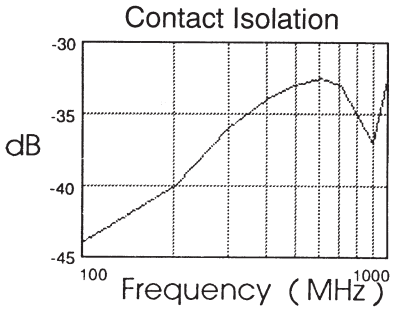

Environmental Characteristics

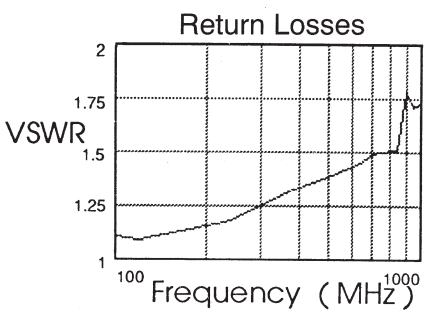

Vibration —
Sine — 30G; 55 to 3000 Hz
Random — 0.4 G^2/Hz; 100 to 1,000 Hz

Shock — 150 G at 11 ms, half-sine wave

Temperature — -65°C to +125°C

Ordering Instructions

Type 3SDM relays can be ordered by specifying the correct catalog number. This number is derived by choosing the proper CODE for each of the six relay characteristics in the order in which the codes are listed in the example. The letter R following the sensitivity code indicates relay received 5,000 operations miss-test.

Example: The relay selected is a 2PDT magnetic-latching relay, voltage calibrated, 2-hole end bracket mount, solder hook header, 500 ohm coil, and 290 mW sensitivity. **3SDM5132H1**

Relay Characteristic Catalog Number

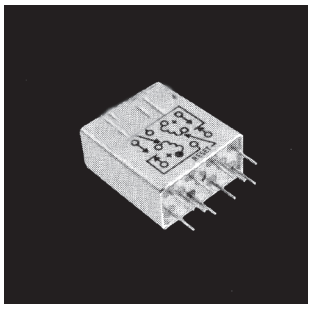

Double Pole, Magnetic Latching, 2 Amps and Less (Continued)

Magnetic Latching, Grid-space, Relays

Type 3SAM (2PDT)

Product Facts

- Special shock designs up to 700 G, 1 ms
- Suitable for pulse operation
- No hang up feature on low power pulses
- Qualified to MIL-R-39016/32
- Special wiring is available

This relay has "memory" in that the contact positions do not change when coil power is removed. Switching is accomplished by applying power to the applicable coil (dual coil) or with the applicable polarity (single coil). The low switching power requirements are further enhanced by its ability to operate from capacitor discharge or other pulses or through its own contacts for batteries or similarly limited supplies.

Electrical Characteristics

Contact Ratings —
DC resistive — 2 amps at 28 volts
DC inductive — 0.5 amps at 28 volts, 200 mH
AC resistive — 1 amp at 115 volts (single coil), case not grounded
AC resistive — 0.25 amps at 115 volts (dual coil), case not grounded
Low-level — 50 µA at 50 mV Peak AC or DC

Contact Resistance —
0.050 ohms initial;
0.100 ohms after life test

Life —
100,000 operations at rated load;
1,000,000 at low-level

Operating Characteristics

Operate Time — 4 ms

Release Time — 4 ms

Contact Bounce — 2 ms

Dielectric Strength —
1,000 volts rms at sea level;
700 volts rms across contact gap

Insulation Resistance —
1,000 megohm min.

Environmental Characteristics

Vibration — 30 G, to 3,000 Hz

Shock — 150 G at 11 ms

Temperature — -65°C to +125°C

See page 1-52 for Mounting Forms, Terminals and Circuit Diagrams.

Four Pole, Electrically Held, 2 Amps and Less (Continued)

.150 Grid-space Relays
Type 3SBH (4PDT)

Product Facts

- **Low profile… only 0.32 inches high**
- **Long life version available**
- **Qualified to MIL-R-39016/14**

This .150 four pole double throw Grid-space relay is the companion to the two pole 3SBC type shown on page 1-41. It also features the same .150 inch pin spacing that allows you to insert the relay with no intermediate pin spreaders. There is adequate clearance for conductors to reach all pins. It is a very compact 4 pole double throw 2 ampere relay.

Electrical Characteristics

Contact Ratings —
DC resistive — 2 amps at 28 volts
DC inductive — 0.5 amps at 28 volts, 200 mH
AC resistive — 0.5 amps at 115 volts, 400 or 60 Hz (enclosure isolated from ground, or enclosure and movable contact at same potential)
AC — 0.125 amps at 115 volts (enclosure at line potential with respect to movable contact)
Low-level — low-level operation at 50 millivolts, 30 µA, 33 ohm miss level

Contact Resistance —
0.050 ohms max.;
0.150 ohms after life test

Life —
100,000 operations at rated loads listed;
1,000,000 operations at low-level loads

Operating Characteristics

Operate Time — 4 ms max.

Release Time — 4 ms max.

Contact Bounce — 1.5 ms

Dielectric Strength —
500 volts rms at sea level;
350 volts rms at 70,000 feet

Insulation Resistance —
1,000 megohms min. over temperature range

Environmental Characteristics

Vibration — 30 G, to 3,000 Hz

Shock — 100 G at 11 ms

Temperature — -65°C to +125°C

See page 1-57 for Mounting Forms, Terminals and Circuit Diagrams.

†Applicable over the operating temperature range in circulating air.

Ordering Instructions

Catalog-selected Relays: The catalog number is derived by choosing the proper CODE for each of the six relay characteristics in the order in which the codes are listed.

Example: The relay selected in this example is a 4PDT .150-grid relay, voltage calibrated, end bracket mounting, 0.13 inch solder hook header, 720 ohms coil resistance, and 250 mW sensitivity. By choosing the proper code for each of these relay characteristics, the catalog number is identified as 3SBH5131K1. The letter R following sensitivity code indicates relay received 5000 operation miss-test. Ex. 3SBH5131K1R.

* The part number example shown on this page is for catalog items. For a list of specific QPL part numbers, please see the index in Section 15.

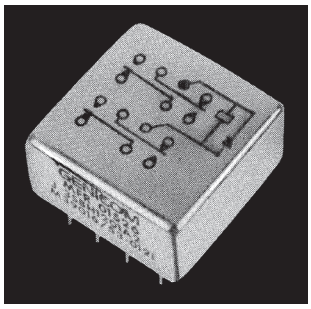

Four Pole, Electrically Held, 2 Amps and Less (Continued)

.150 Grid-space Hybrid Relays

Type 3SBH (4PDT)

Product Facts

- **Low profile… only 0.32 inches high**
- **Long life version available**
- **Qualified to MIL-R-39016/53 & 54**

The 4PDT .150 Grid-space hybrid relays are advanced designs of the standard high reliability 4PDT .150 Grid-space relays. In the single diode version, the relay coil-back electromotive force is suppressed to prevent circuit/component damage. With the dual diode version, a steering diode is added to the coil circuit, along with the suppression diode. This steering diode prevents operation of the relay by reverse polarity voltages and protects the suppression diode. The single diode version is qualified to MIL-R-39016/53 and the dual diode is qualified to MIL-R-39016/54.

Electrical Characteristics

Contact Ratings —
DC resistive — 2 amps at 28 volts
DC inductive — 0.5 amps at 28 volts, 200 mH
AC resistive — 0.5 amps at 115 volts, 400 or 60 Hz (enclosure isolated from ground, or enclosure and movable contact at same potential)
AC — 0.125 amps at 115 volts (enclosure at line potential with respect to movable contact)
Low-level — 50 µA at 50mV

Contact Resistance —
0.050 ohms max.;
0.150 ohms after life test

Life — 100,000 operations at rated loads listed; 1,000,000 operations at low-level loads

Operating Characteristics

Operate Time — 4 ms max.

Release Time — 6 ms max.

Contact Bounce — 2.0 ms

Dielectric Strength (Note 1) —
500 volts rms at sea level;
350 volts rms at 70,000 feet

Insulation Resistance (Note 1) —
1,000 megohms min. over temperature range

Semiconductor Characteristics at 25°C

Max. Negative Transient — 1 volt

Breakdown Voltage —
100 Vdc @ 10 µA min.

Max. Leakage Current —
1 µA @ 50 Vdc

Note 1: Tests for dielectric withstanding voltage and insulation resistance should be made with "coil terminals" shorted together to avoid unnecessary electrical stress to semiconductor elements.

See page 1-57 for Mounting Forms, Terminals and Circuit Diagrams.

Ordering Instructions

Catalog-selected Relays: The catalog number is derived by choosing the proper CODE for each of the six relay characteristics in the order in which the codes are listed.

Example: The relay selected in this example is a 4PDT .150-grid relay, voltage calibrated, end bracket mounting, 0.13 inch solder hook header, 720 ohms coil resistance, and 250 mW sensitivity. By choosing the proper code for each of these relay characteristics, the catalog number is identified as 3SBH5131K5. The letter R following sensitivity code indicates relay received 5000 operation miss-test. Ex. 3SBH5131K5R.

* The part number example shown on this page is for catalog items. For a list of specific QPL part numbers, please see the index in Section 15.

Four Pole, Electrically Held, 2 Amps and Less (Continued)

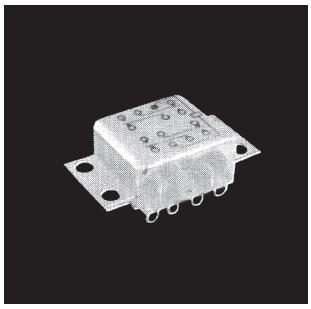

Long-life .150 Grid-space Relays

100,000,000 Operations At Low Levels

Type 3SDH (4PDT)

Product Facts

- **Long life at low level or signal loads**
- **Low profile… only 0.32 inches high**

The 3SDH relay is designed for 100,000,000 operations at low levels. It is a four pole double throw Grid-space relay. The 0.150 inch pin spacing allows the user to insert the relay with no intermediate pin spreaders. There is adequate clearance for conductor to reach all pins.

Electrical Characteristics

Contact Ratings —
DC resistive — 2 amps at 28 volts, (DC 100,000 operations)
DC inductive — 0.3 amp at 28 volts, (L/R not greater than 0.008)
AC resistive — 0.5 amp at 115 volts, 400 or 60 Hz (enclosure isolated from ground, or enclosure and movable contact at same potential)
AC resistive — 0.125 amp at 115 volts (enclosure at line potential with respect to movable contact)
Low-level — 50 µA at 50 mV Peak AC or DC

Contact Resistance —
0.050 ohms max.;
0.150 ohms after life test

Life — 100,000 operations at rated loads listed; 100,000,000 operations at low-level loads

Operating Characteristics

Operate Time @ +25°C —
4 ms max.

Release Time @ +25°C —
4 ms max.

Contact Bounce @ +25°C — 1.5 ms

Dielectric Strength —
500 volts rms at sea level;
350 volts rms at 70,000 feet

Insulation Resistance —
1,000 megohms min. over temperature range

Environmental Characteristics

Vibration — 30 G, to 3,000 Hz

Shock — 100 G at 11 ms

Temperature — -40°C to +125°C

See page 1-59 for Mounting Forms, Terminals and Circuit Diagrams.

Ordering Instructions

Catalog-selected Relays: The catalog number is derived by choosing the proper CODE for each of the six relay characteristics in the order in which the codes are listed.

Example: The relay selected in this example is a 4PDT .150-grid relay, voltage calibrated, end bracket mounting, 0.13 inch solder hook header, 720 ohms coil resistance, and 210 mW sensitivity. By choosing the proper code for each of these relay characteristics, the catalog number is identified as 3SDH5131K1. The letter R following sensitivity code indicates relay received 5000 operation miss-test. Ex. 3SDH5131K1R.

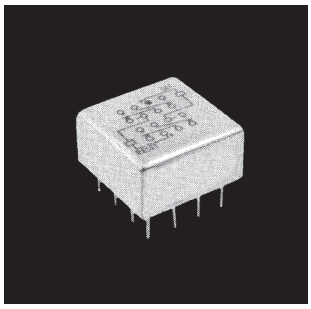

Four Pole, Magnetic Latching, 2 Amps and Less

.150 Grid-space Magnetic Latching Relays

Type 3SBM (4PDT)

Product Facts

- **Low profile… only 0.32 inches high**
- **Internal diode for coil transient suppression available**
- **Qualified to MIL-R-39016/31**
- **Suitable for low pulse operation — 2 ms at rated voltage**

The Type 3SBM relay adds magnetic latching capability to the popular and growing family of .150-grid relays. This relay has memory in that the contact positions do not change when coil power is removed. Switching is accomplished by applying power to the applicable coil (dual coil) or with the applicable polarity (single coil). The low switching power requirements are further enhanced by its ability to operate from capacitor discharge or other pulses or through its own contacts from batteries or similarly limited supplies.

Electrical Characteristics

Operate Sensitivity—
Single-coil form, 100 mW,
Dual-coil form, 180 mW

Contact Arrangement—
4-pole double-throw (4C)

Contact Ratings —
DC resistive — 2 amps at 28 volts
DC inductive — 0.5 amp at 28 volts, 200 mH
AC resistive — 0.5 amp at 115 volts (enclosure isolated from ground, or enclosure and movable contact at same potential)
AC — 0.125 amp at 115 volts (enclosure at line potential with respect to movable contact)
Low-level — 50 µA at 50 mV
Peak AC or DC

Contact Resistance —
0.050 ohms max.;
0.150 ohms after life tests

Life —
100,000 operations at rated loads listed;
1,000,000 operations at low-level loads

Operating Characteristics

Operate Time — 4 ms max.

Release Time — 4 ms max.

Contact Bounce — 1.5 ms

Dielectric Strength —
500 volts rms at sea level;
350 volts rms at 70,000 feet and above

Insulation Resistance —
1,000 megohms min. over temperature range

Environmental Characteristics

Vibration — 30 G, 55 to 3,000 Hz

Shock — 150 G at 11 ms

Temperature — -65°C to +125°C

See page 1-62 for Mounting Forms, Terminals and Circuit Diagrams.

*Values listed are factory test and inspection values. User should allow for meter variations.
†Applicable over the operating temperature range in circulating air.

Ordering Instructions

Type 3SBM relays can be ordered by specifying the correct catalog number. This number is derived by choosing the proper CODE for each of the six relay characteristics in the order in which the codes are listed.

Example: The relay selected in this example is a dual coil, current calibrated, four-hole end bracket mounting, solder hook header, 37 ohms coil resistance, and 180 mW sensitivity. By choosing the proper code for each of these relay characteristics, the catalog number is identified as 3SBM6131N2. The letter R following sensitivity code indicates relay received 5000 operation miss-test. Ex. 3SBM6131N2R.

Relay Characteristic
Catalog No.

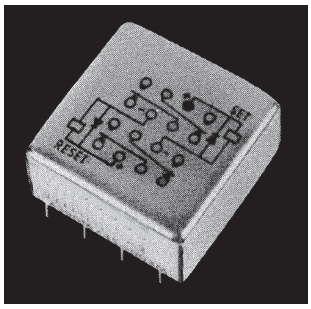

* The part number example shown on this page is for catalog items. For a list of specific QPL part numbers, please see the index in Section 15.

Four Pole, Magnetic Latching, 2 Amps and Less (Continued)

.150 Grid-space Hybrid Magnetic Latching Relays
Single Diode, Dual Diode
Type 3SBM (4PDT)

Product Facts

- **Low profile… only 0.32 inches high**
- **Suitable for pulse operation**
- **Qualified to MIL-R-39016/35**
- **Qualified to MIL-R-39016/36**

The dual coil version of the 3SBM magnetic latching relay is now available with coil transient suppression with or without blocking diodes for reverse polarity protection. This hybrid magnetic latching relay is an addition to the growing family of .150 grid relays. The diode method is employed to limit the back EMF generated when the coil circuit is opened in order to protect other circuit components such as semi-conductors. The contact load capabilities of the 3SBM as well as the memory feature of the latching function are both maintained.

Electrical Characteristics

Contact Arrangement—
4-pole double-throw (4C)

Operate Sensitivity—
Single-coil form, 100 mW,
Dual-coil form, 180 mW per coil

Contact Ratings —
DC resistive — 2 amps at 28 volts
DC inductive — 0.5 amp at 28 volts, 200 mH
AC resistive — 0.5 amp at 115 volts (enclosure isolated from ground, or enclosure and movable contact at same potential)
AC — 0.125 amp at 115 volts (enclosure at line potential with respect to movable contact)
Low-level — 50 µA at 50 mV
Peak AC or DC

Contact Resistance —
0.050 ohms max.;
0.150 ohms after life test

Life — 100,000 operations at rated loads listed; 1,000,000 operations at low-level loads

Operating Characteristics

Operate Time — 4 ms max.

Release Time — 4 ms max.

Contact Bounce — 1.5 ms

Dielectric Strength (Note 1) — 500 volts rms at sea level;
350 volts rms at 70,000 feet and above

Insulation Resistance (Note 1) — 1,000 megohms min. over temperature range

Environmental Characteristics

Vibration — 30 G, 55 to 3,000 Hz

Shock — 150 G at 11 ms

Temperature — -65°C to +125°C

Semiconductor Characteristics at 25°C

Max. Negative Transient — 1 volt

Breakdown Voltage — 100 Vdc min.

Max. Leakage Current —
1 µA @ 50 Vdc

Note 1: Tests for dielectric withstanding voltage and insulation resistance should be made with "coil terminals" shorted together to avoid unnecessary electrical stress to semiconductor elements.

See page 1-62 for Mounting Forms, Terminals and Circuit Diagrams.

Header and Connection Diagrams

Dual Coil

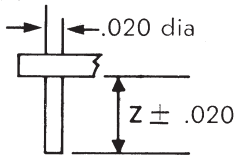

When the SET coil is pulsed with plus polarity on the blue bead, the movable contacts take the position shown in the connection diagram. The contacts are transferred when the RESET coil is pulsed with plus polarity on the reset terminal. A new pulse of the SET coil with plus polarity on the blue bead will transfer the contacts back.

The contacts can also be transferred by applying a pulse of opposite polarity to the coil previously pulsed. However, this method requires slightly more power than the more normal form of operation described in the previous paragraph.

Product Facts

- **Hermetically sealed**
- **Up to 5 amps switching**
- **High shock & vibration ratings**
- **Optional terminals & mounting styles**
- **Excellent RF switching**

Electrical Characteristics

Contact Arrangement — 2 Form C (DPDT)

Contact Material — Stationary — Hardened silver alloy
Moveable — Gold plated hardened silver alloy

Contact Resistance — Before Life — 50 milliohms max. (measured at 10 mA @ 6 Vdc)
After Life — 100 milliohms max. (measured @ 2 A @ 28 Vdc)

Mechanical Life Expectancy — 50 million operations

Coil Voltage — 5 to 48 Vdc (HFW4A)
5 to 26.5 Vdc (HFW5A)

Coil Power — 1.4 watts max. @ 25°C

Duty Cycle — Continuous

Pick-up Voltage — Approximately 50% of nominal coil voltage

Pick-up Sensitivity @ 25°C — 145 to 260 mW

Contact Ratings

Contact Load	Type	Operations Min.
4 A @ 28 Vdc (HFW4A)	Resistive	100,000

MW3 & MW3HP Models, 3 GHz Switching 2-3, 2-4
MW4 & MW4HP Models, 4 GHz Switching 2-5, 2-6
MW6 & MW6HP Models, 6 GHz Switching 2-7, 2-8

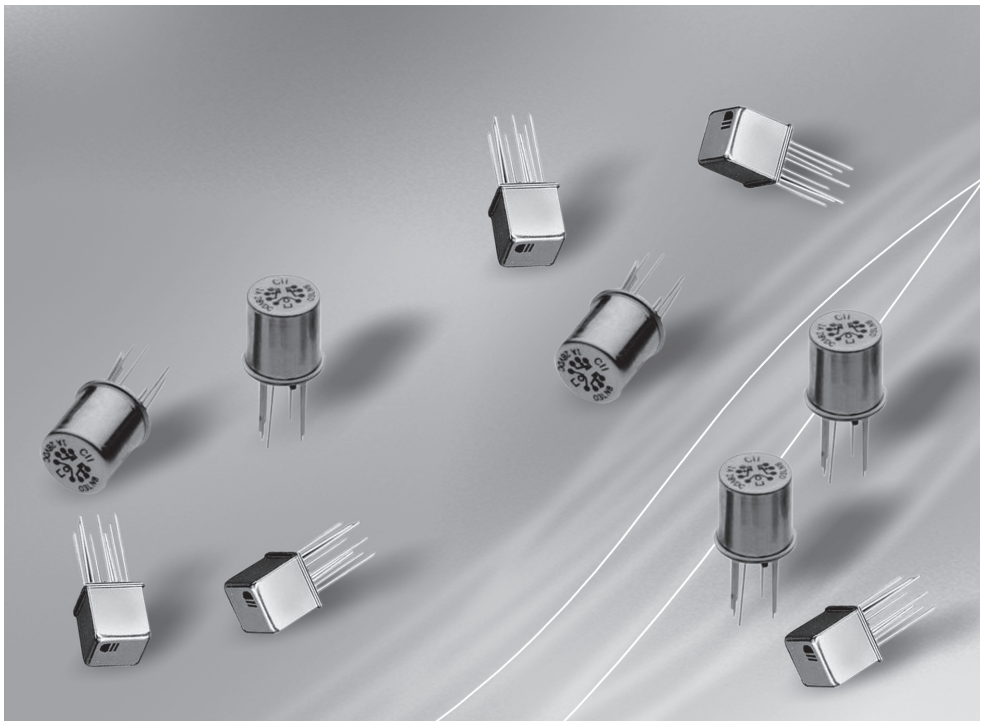

Double Pole, Electrically Held, 1 Amp and Less

MW3 / MW4 / MW6 / MW3HP / MW4HP / MW6HP Series Relays

Microwave Switching, Hermetically Sealed, DPDT

Product Facts

- Excellent signal isolation, stable insertion loss and low VSWR
- Provide repeatable RF performance at frequencies up to the 3 GHz. level (MW3/MW3HP), 4 GHz. level (MW4/MW4HP) & 6 GHz. level (MW6/MW6HP)
- Standard versions for applications ranging from wireless communications to precision high-speed test equipment
- High performance (HP) versions for use under more demanding environmental conditions
- Standard or sensitive (S) coils are offered in a range of DC input voltages
- 2 Form C (DPDT) contacts rated low-level to 1 amp
- Extended mechanical life expectancy of 10 million operations
- Robust, hermetically sealed enclosure

These CII relays provide microwave frequency switching in a hermetically sealed, subminiature package.

Both standard and high performance models are offered in 3 GHz., 4 GHz. and 6 GHz. types.

Standard models (MW3, MW4 and MW6) perform in temperature ranges from -55°C to +85°C and withstand 10G vibration and 30G shock.

High performance models (MW3HP, MW4HP and MW6HP) offer extended temperature ratings of -65°C to +125°C while providing 30G's vibration and 100G's shock (75G's for MW3) environmental ratings.

All are available with either standard or sensitive DC coils. Nominal coil power is 367-500mW (model dependent) for standard coils and 169-250mW for sensitive coils.

Signal isolation is 18dB at 6 GHz. (MW6/MW6HP), 18dB at 4 GHz. (MW4/MW4HP), and 22dB at 3 GHz. (MW3/MW3HP).

Insertion loss is 0.38dB for MW6/MW6HP, 0.27dB for MW4/MW4HP, and 0.36dB for MW3/MW3HP.

VSWR is a low 1.30:1 @ 6GHz. for MW6/MW6HP, 1.36:1 @ 4GHz. for MW4/MW4HP, and 1.24:1 @ 3GHz. for MW3/MW3HP.

—	—	1.5	1.5

Dielectric Withstanding Voltage —
Between Open Contacts, Between Adjacent Contacts and Between Contacts and Coil —
MW3 types — 350 Vrms, 60 Hz.
MW3HP types — 500 Vrms, 60 Hz.

Insulation Resistance —
1,000 megohms @ 500 VDC

Environmental Characteristics

Temperature Range —
MW3 types — -55°C to +85°C.
MW3HP types — -65°C to +125°C.

Weight —
MW3, MW3HP: 0.09 oz. (2.55 g)
MW3S, MW3HPS: 0.12 oz. (3.40 g).

Vibration Resistance —
MW3 types — 10 G's, 10-500 Hz.
MW3HP types — 30 G's, 10-3,000 Hz

Shock Resistance —
MW3 types — 30 G's, 6 ± 1 ms.
MW3HP types — 75 G's, 6 ± 1 ms.

Contact Ratings

Contact Load	Type	Operations Min.
1.0A @ 28VDC	Resistive	100,000
200mA @ 28VDC (300mH)*	Inductive	100,000
30µA @ 50mVDC	Low Level	10,000,000

* The inductive rating is only applicable to high performance models (MW3HP and MW3HPS).

Isolation

Test Conditions

Test Board — 0.031" double sided copper clad, PTFE based laminate.

Connections — Relay header is soldered to ground place. Relay terminals are soldered to through holes. SMA connectors are soldered to circuit traces.

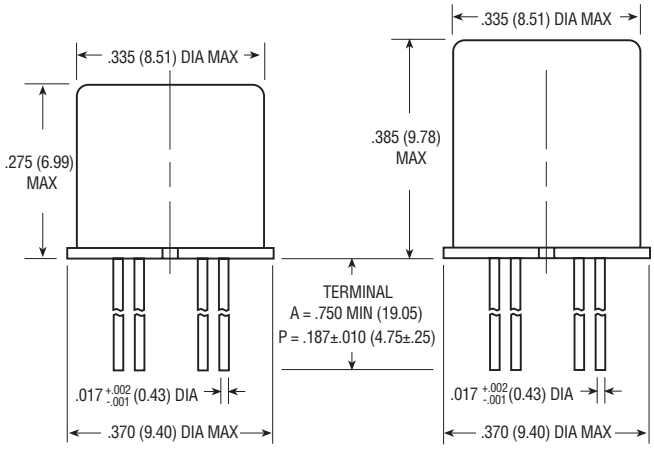

Temperature — Room ambient.

Signal Strength — 0 dBm.

Notes:

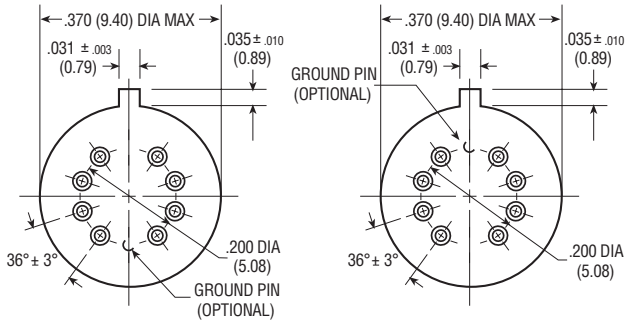

1. Unused terminals were terminated with 50 ohm impedance load.
2. All readings are typical.

Enclosures

MW3 / MW3HP **MW3S / MW3HPS**

Header

Ground Pin Position "G" **Ground Pin Position "E"**

For other ground pin configurations consult factory.

Header and Terminal Finish:
Nickel plated on MW3 & MW3S.
Tin-lead plated on MW3HP & MW3HPS.

Part Numbering System

Typical Part Number	MW3	S	– 5	A	G

Series:
MW3 = 3 GHz. switching relay
MW3HP = High performance 3 GHz. switching relay

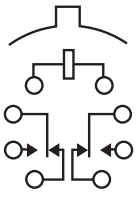

Coil Sensitivity:
Leave Blank = Standard Coil S = Sensitive Coil

Coil Designator:
5 = 5VDC 6 = 6VDC† 9 = 9VDC†
12 = 12VDC 18 = 18VDC 26 = 26.5VDC
† 6 and 9 volt coil only available on high performance models.

Terminal Length:
A = 0.750 in (19.05 mm) P = 0.187 ± 0.010 in (4.75 ± 0.25 mm)

Ground Pin Position (see header drawings above):
G = Opposite locating tab E = Near locating tab.
Consult factory for other ground pin configurations.

Electrical Characteristics

Contact Arrangement — 2 Form C (DPDT)

Contact Material — Stationary — Gold/platinum/palladium/silver alloy (Gold plated)
Moveable — Gold/platinum/palladium/silver alloy (Gold plated)

Contact Resistance — Before Life — 100 milliohms max. (measured @ 10 mA @ 6 Vdc)
After Life — 200 milliohms max. (measured @ 1 A @ 28 Vdc)

Mechanical Life Expectancy — 1 million operations

Coil Voltage — 5 to 26.5 Vdc

Coil Power — 370 mW max. @ 25°C

Duty Cycle — Continuous

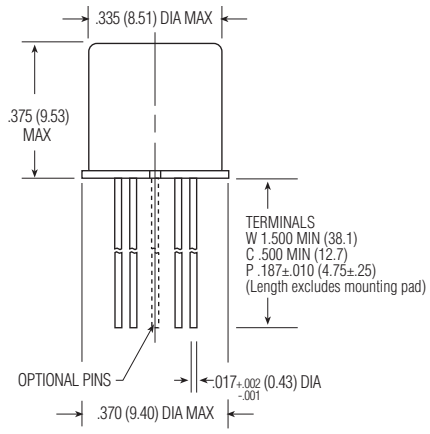

Pick-up Voltage — Approximately 70% of Nominal Coil Voltage

Pick-up Sensitivity — 155 mW max. @ 25°C

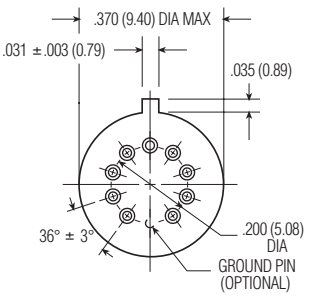

Contact Ratings

Contact Load	Type	Operations Min.
1.0 A @ 28 Vdc	Resistive	100,000
250 mA @ 115 Vac, 60 Hz & 400 Hz	Resistive (Case not grounded)	100,000
100 mA @ 115 Vac, 60 Hz & 400 Hz	Resistive	100,000
0.2 A @ 28 Vdc	Inductive (0.32 Henry)	100,000
0.1A @ 28 Vdc	Lamp	100,000
30 µA @ 50 mVdc	Low Level	1,000,000
0.1 A @ 28 Vdc	Intermediate Current	50,000

Enclosure

CII High Reliability Space Relays

Product Testing

TE's CII High Reliability Space Relay products begin as relays manufactured to MIL-Spec requirements. They then receive additional processing and testing to particular customer specifications.

All operations and processes are documented as required by MIL-STD-790. Each operation and process has an accompanying route sheet that allows tracking of all materials and processes associated with an order. For those who require additional information, we can serialize, track and document the data for individual relays.

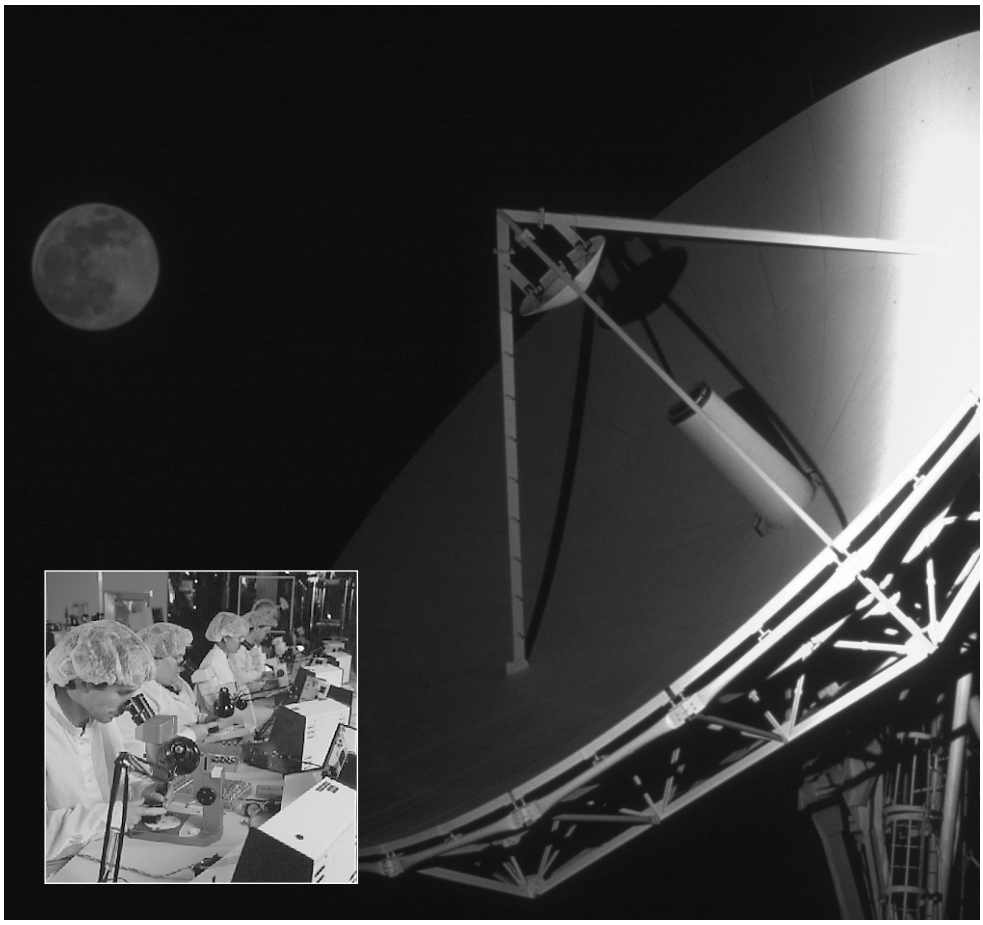

In addition to quality audits throughout the manufacturing process,

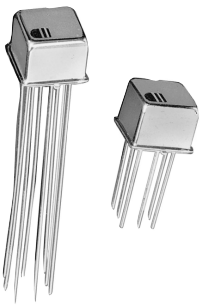

our High Reliability Space relays are extensively tested to assure that your High Reliability standards and requirements are met or exceeded.

Our High Reliability Space Relay products are tested 100% for Group A parameters and then subjected to additional testing including: PIND, Small Particle Cleaning, Random, Vibration, and X-Ray. Group B and C testing is done for lot integrity based on MIL-R-39016. These test profiles are tailored to your individual requirements.

Destructive testing is often performed, based on the actual application of the device. On a "standard" QPL relay, this testing is performed periodically, and performance is assumed for the period of manufacture. In the High Reliability Space Relay, this performance is proven for each relay lot based on the testing and documentation of each serialized relay.

Clean Room

All of our High Reliability Space Relay products are manufactured in a temperature and humidity controlled environment utilizing a clean room area for sub-assemblies. All final assembly, intermediate testing, small particle cleaning, pre-cap inspection, and sealing is performed in an integrated, Class 1000 clean room that is temperature and humidity controlled in accordance with Federal Standard 209E. Temperature, humidity and air particle counts are monitored for precise control to ensure the integrity of the internal relay environment.

CII High Reliability Space Relays (Continued)

Products

■ **Half Size Non-Latching**

Available in 2, 4 and 6 Form C configurations, low level to 5 amp switching.

■ **Half Size Latching**

Available in 2 and 4 Form C configurations, low level to 2 amp switching.

■ **One Fifth Non-Latching**

2 Form C, low level 2 amp switching.

■ **TO-5/.100 Grid**

Available in 2 Form C, round and square outlines, low level to 1 amp switching, military qualified, optional spreader and mounting pads, ground pins, internal diodes, transistors, and hybrid assemblies.

Services

Our engineering staff, with over 100 years of combined experience in aerospace and High Reliability mil-spec relays, will help you find the right product for your needs. Our High Reliability Space Relays Department experts are cross-trained within their respective cells to achieve maximum quality and consistency. In addition, team and SPC training utilizing ISO 9000 concepts is given regularly.

Applications

■ **Space Satellites (telecommunications)**

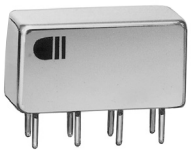

■ **Weather Tracking**

■ **Surveillance**

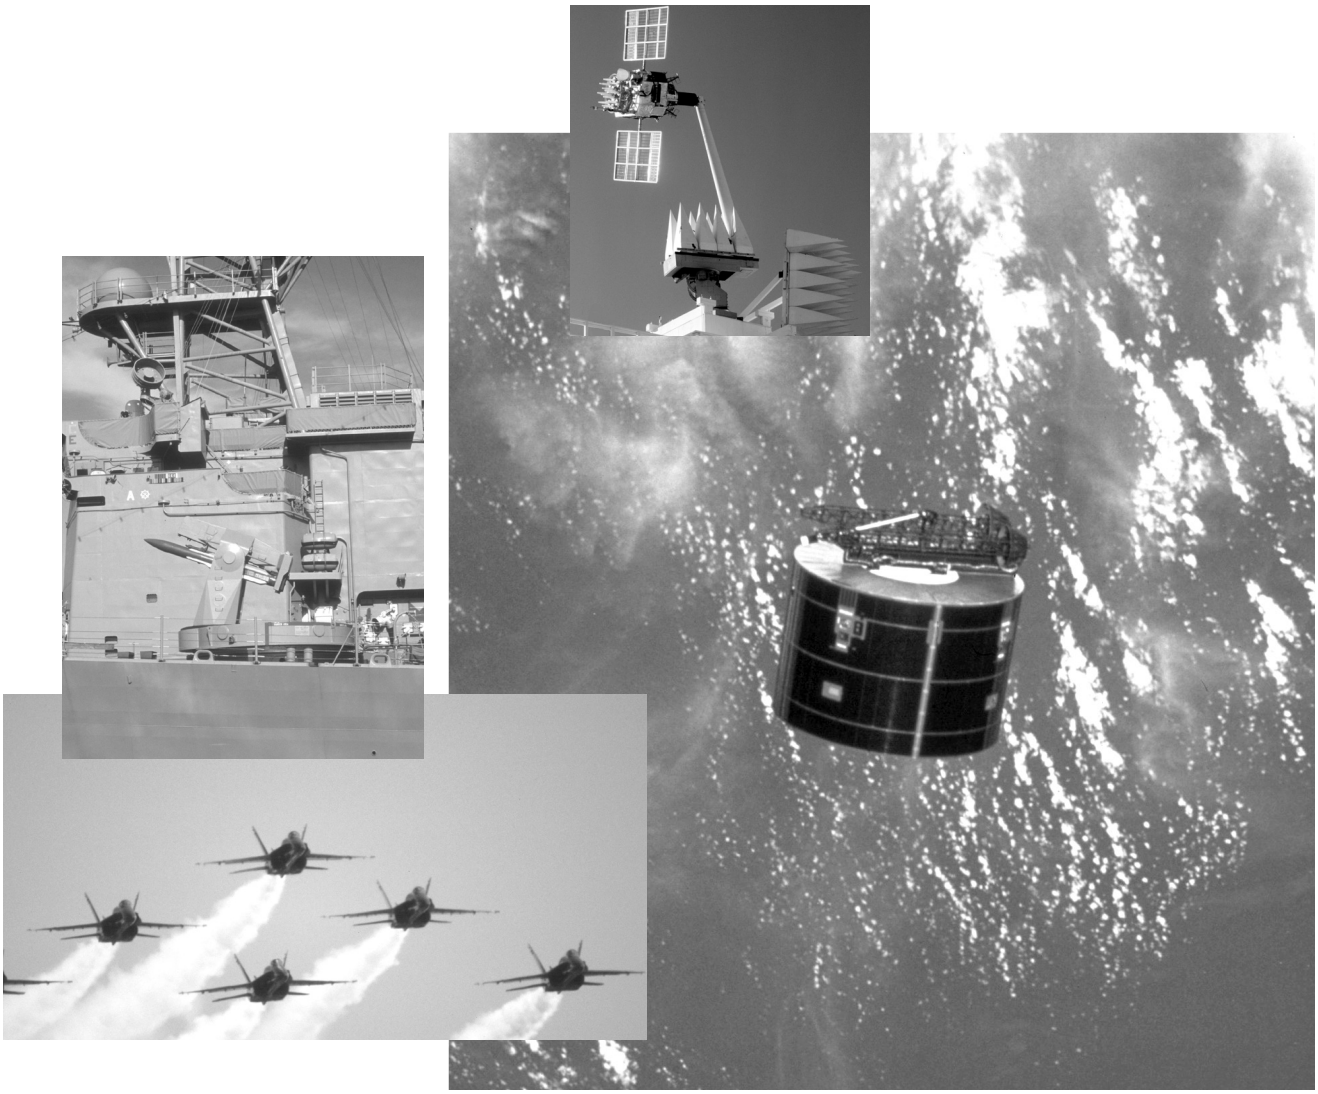

■ **Infrared Observation Instrumentation**

■ **Missile Systems**

■ **Torpedo Guidance Circuits**

CII High Reliability Space Relays customers include ITT's HIRS/3 and AVHRR/3 instruments designed for the Polar Orbiting Environmental Satellite (POES) and McDonnell Douglas's Delta Launch II and III Vehicles.

KILOVAC Space Relays

The KILOVAC brand of lightweight relays and contactors handle high-power DC or high-voltage DC requirements for the space industry.

They are available hermetically sealed, with a variety of electrical configurations, power ratings, voltage ratings, and mounting styles to make your electrical system more reliable and capable.

The photo to the right shows “representative samples” of our KILOVAC brand relays and contactors for space applications.

Contact TE Connectivity for more information.

Products shown in photo as listed below:

Back Row - 270Vdc Space-Rated Contactors:

AP150X — 150A

AP90X — 90A

AP350X — 350A

Middle Row - Space-Rated Contactors:

MAP200 —

Available in Form X (Electrically Held) and Form P (Latching) configurations.

Available in Vertical-Mount (shown) and Horizontal-Mount configurations.

MAP100 —

Available in Form X (Electrically Held) and Form P (Latching) configurations.

Available in Horizontal-Mount (shown) and Vertical-Mount configurations.

Front Row - Space-Rated Relays:

AP10 — 10A, 270Vdc

Available in Form A (SPST-NO) and Form B (SPST-NC) configurations.

Available in Panel-Mount (shown), PCB-Mount, and Chassis-Mount (unpotted).

K41R — 5kVdc

SPDT-Latching configuration (SPST-Latching as well as SPST-NO, SPST-NC, and SPDT Electrically-Held configurations also available)

AP44P — 15A, 270Vdc

SPST-Latching

TD2 Series Time Delay Relay

Product Facts

- **Qualified to:**
  MIL-PRF-83726/28
  MIL-PRF-83726/29
  MIL-PRF-83726/30
  MIL-PRF-83726/31
- **Fixed delay on operate, fixed delay on release, adjustable delay on operate & adjustable delay on release**
- **Meets or exceeds electrostatic discharge MIL-STD-1686 Class Non-Sensitive**
- **Welded hermetically sealed enclosure occupies about 1 in³ (16.4 cm³)**
- **10A, 2 form C (DPDT) output contacts**

TD2 series time delay relays are available for delay on operate or delay on release operation. Either can be supplied as fixed or resistor adjustable types. Both military and commercial versions are offered.

These products consist of solid state timing circuits controlling our FCA-210 series relays, providing 2 Form C (DPDT) output contacts rated 10 amps. The internal timing circuit uses an R/C controlled oscillator with a programmable digital pulse counter, gating a semiconductor switch to operate the relay. Timing is independent of whether the controlling voltage is a ramp or step function.

For the adjustable models the user specifies a one decade range in seconds, within which the required delay will be set. This range is programmed internally at the time of manufacture. The required delay is obtained by calculating the oscillator timing resistor as follows and connecting it externally to terminals 1D - 3D as below.

$R_{EXT} = [(T_1 / T_0) -1]$ 100K Ohms

T_0 = Minimum time of selected decade in seconds.

T1 = Required time delay.

EXAMPLE

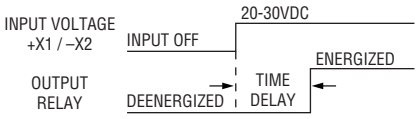

Selected Range = 3-30 sec

Required Time = 15 sec

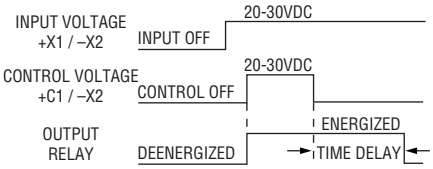

$R_{EXT} = [(15/3) -1]$ 100K = 400K

Timing Action and Terminal Wiring

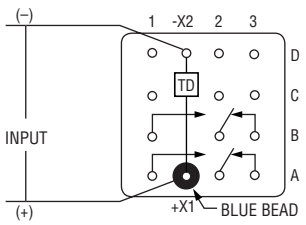

Delay On Operate:
The time delay starts on the application of input voltage to X1-X2. The timing circuit energizes the end of the time delay period.

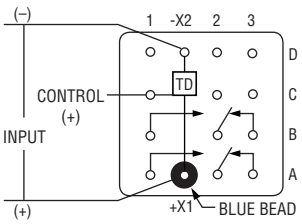

Delay On Release:
The input voltage is continuous to X1-X2. When the control voltage is applied to C1-X2 the timing circuit and the relay are both energized. The time delay starts when the control voltage is shut off.

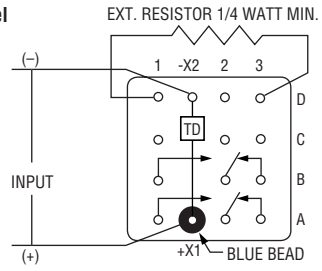

Fixed Model

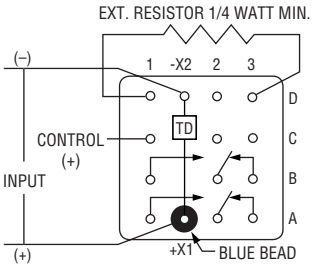

Fixed Model

Adjustable Model

Adjustable Model

Terminal designations shown in the diagrams above are for reference only. They do not appear on the relay header.

TD2 Series Time Delay Relay (Continued)

Specifications

Timing Data	
Timing Action	Delay on Operate or Delay on Release
Time Delay, Fixed – M83726/28, /29 and Commercial 28C, 29C	Select from 0.1 to 600 sec for Commercial Models Select from 0.1 to 500 sec for Mil-Spec Models
Time Delay, Adjustable – M83726/30, /31 and Commercial 30C, 31C	Select one decade between 0.1 to 1.0 and 60 to 600 seconds
Timing Accuracy (note 1)	±10% of Nominal Value
Recycle Time (note 2)	50 ms, max., to next cycle.
Power Interrupts	Accuracy is not affected by power interruptions up to 1 ms spaced at least 10ms apart.
Input Data	
Input Voltage	28 Vdc nominal, range 20 - 32 Vdc
Duty Rating	Continuous
Input Current	110 mAdc Max @ 25°C
Control Voltage (applies only to Delay on Release type)	20 - 32 Vdc
Control Current	15 mAdc Max (applies only to delay on release types)
Input Voltage Polarity Protection	The timer will be inoperative during, and undamaged by, reversal of the polarity of the input voltage.
Output Data	
Contact Form	2 Form C (DPDT)
Contact Material	Silver Cadmium Oxide, Gold plated
Contact Rating in Amps (Continuous Duty)	

Type of Load	Life (Min.) Cycles	28 Vdc	115 Vac 400Hz	115/200 Vac – 3 phase 400 Hz.	115/200 Vac – 3 phase 60 Hz.*
Resistive	100×10^3	10	10	10	2.5
Inductive	20×10^3	8	8	8	2.5
Motor	100×10^3	4	4	4	2.0
Lamp	100×10^3	2	2	2	1.0

* 60 Hz. loads are rated at 10×10^3 cycles.

Overload Current	40 Adc; 60A, 400 Hz.
Rupture Current	50 Adc; 80A, 400 Hz.
Max. Contact Drop at 10A	Initial 0.150V; After Life 0.175V
Electrical Data	
Electrostatic Discharge Withstand Voltage	16,000V
Transients (note 3):	
Positive Transients	+80V
Self-generated Transients	±50V, Max.
Spike Susceptibility	±600V, 10 µs, Max.
Insulation Resistance (note 4)	1,000 megohms at 500Vdc, between each pin and case
Dielectric Strength (note 4)	1,000Vrms at 60 Hz at sea level, between case and all pins connected together
Environmental Data	
Ambient Temperature Range, Operating	-55°C to +125°C
Altitude	80,000 feet maximum
Shock Resistance	100 G's, 6 ms.
Vibration Resistance, Sinusoidal	Z & Y Enclosure: 30 G's, 33-3000Hz.; X & W Enclosure: 20 G's, 33-3000Hz.
Mechanical Data	
Approximate Weight	2.5 oz. (71g) Max.

NOTES

1. The accuracy requirement applies to any combination of operating temperature and voltage. Add ±10ms for timing less than one second.
2. Recycle time to assure that the next timing cycle will be completed. Units can be recycled during timing and after time-out:
   Delay on operate models – Power must be OFF the input at least 10 ms. Delay on release models – Power must be ON the control terminal at least 10 ms.
3. Transient specifications are based on a maximum duty cycle of 1/50.
4. All wired terminals must be connected together during this test. Dielectric withstanding voltage and insulation resistance are measured between all mutually insulated wired terminals and between all these terminals and case.
5. Inductive loads must be diode suppressed.

TD2 Series Time Delay Relay (Continued)

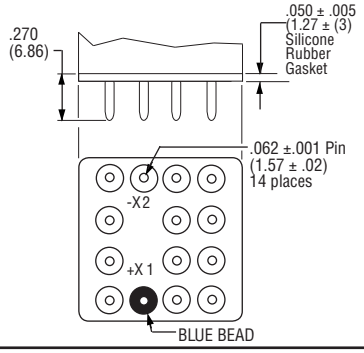

Outline Dimensions

The standard terminal types and enclosures are illustrated below with dimensions expressed as inches ± 0.010 and (millimeters ±0.25).

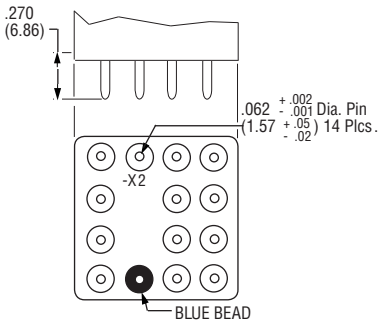

Terminals

All terminals on 0.200 (5.4) centers.

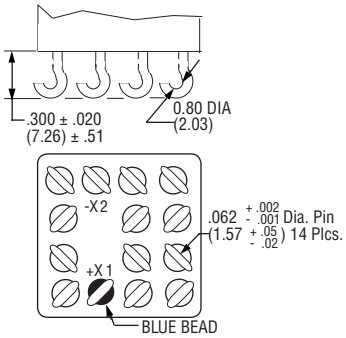

CODE "P"
Socket Pins – Gold Plated

CODE "T"
Circuit Board Pins – Tin/Lead Plated

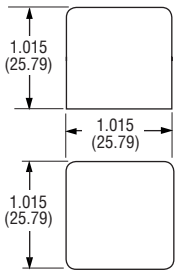

CODE "S"
Solder Hooks

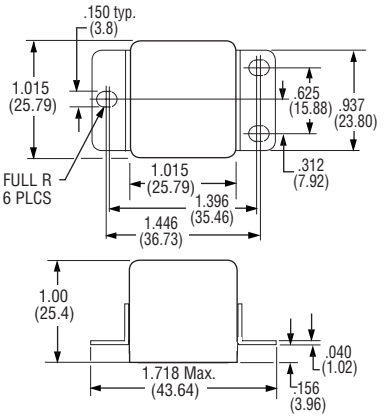

Enclosures

All Enclosures have cupro-nickel cans bright acid tin/lead plated after assembly to terminal headers.

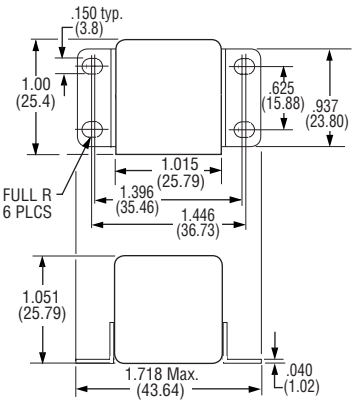

CODE "Z"

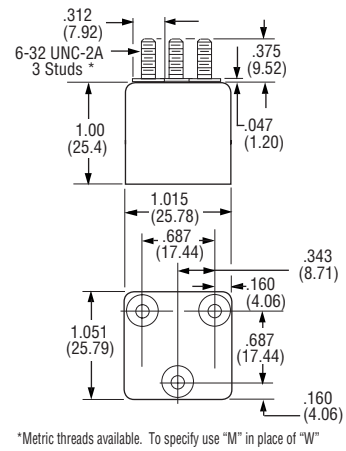

CODE "Y"

CODE "X"

CODE "W"

*Metric threads available. To specify use "M" in place of "W"

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

TD2 Series Time Delay Relay (Continued)

Part Numbering System
Mil-Spec Types

Typical Mil-Spec Part Number	TD2	28-	5002	P

Series:

TD2 = Time delay relay with 2 pole, 10A output

Mil-Spec Model:

28 = M83726/28 (Fixed, Delay on Operate)
29 = M83726/29 (Fixed, Delay on Release)
30 = M83726/30 (Adjustable, Delay on Operate)
31 = M83726/31 (Adjustable, Delay on Release)

Time Delay Range (Within 0.1 to 500 seconds):

For /28 and /29 types (fixed types), the delay is expressed in milliseconds in a four-digit code. The first three digits are significant. The fourth is the number of zeros following the first three.
Example: 5002 is 50 seconds.

For /30 and /31 types (adjustable types), the delay decade range is expressed in milliseconds in a four-digit code representing the upper limit of the range. The first three digits are significant. The fourth is the number of zeros following the first three.
Example: 1001 is 1 second, so the range is 0.1 to 1 second.

Terminals:

P= Socket Pin Terminals
S= Solder Hook Terminals

Note: Mil-spec models have “Y” type enclosure.

Commercial Types

Typical Commercial Part Number	TD2	28C-	1001	P	Y

Series:

TD2 = Time delay relay with 2 pole, 10A output

Commercial Model:

28C = Fixed, Delay on Operate (COTS version of M83726/28)
29C = Fixed, Delay on Release (COTS version of M83726/29)
30C = Adjustable, Delay on Operate (COTS version of M83726/30)
31C = Adjustable, Delay on Release (COTS version of M83726/31)

Time Delay Range (Within 0.1 to 600 seconds):

For fixed types, the delay is expressed in milliseconds in a four-digit code. The first three digits are significant. The fourth is the number of zeros following the first three.
Example: 5002 is 50 seconds.

For adjustable types, the delay decade range is expressed in milliseconds in a four-digit code representing the upper limit of the range. The first three digits are significant. The fourth is the number of zeros following the first three.
Example: 1001 is 1 second, so the range is 0.1 to 1 second.

Terminals:

P= Socket Pin Terminals
S= Solder Hook Terminals
T= Solder Pin Terminals

Enclosure

W = Mounting Studs
X = Horizontal Flange Mount
Y = Raised Vertical Flange Mount
Z = No Mount

NOTE: Commercial versions are available with timing ranges outside of .1 to 600 sec. range.

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

FCB-205 Series, 5 Amperes, DPDT

Product Facts

- Hermetically Sealed
- All Welded Construction
- Balanced Force
- Permanent Magnet Drive
- Contacts rated low level to 5 Amps VDC and 115/200 VAC 400 Hz, 3 Phase
- Weight .54 ounces max. (15.4 grams)
- Qualified to M83536/1, /2

The Series FCB-205 relay is a polarized single-side stable design, where the flux from a permanent magnet provides the armature holding force in the deactivated state, and its flux path is switched and combined with the coil flux in the operated state. This results in appreciably increased contact pressure in both states over that of a spring return nonpolar design. We also manufacture other forms of the FCB relay:

FCB-405 — 5 Amp 4PDT Relay

Contact Rating — Amperes Ratings Are Continuous Duty

Type of Load	Life (Min.) Cycles x 10^3	28 VDC	115VAC 400Hz	115/200VAC 400Hz, 3Ø
Resistive	100	5	5	5
Inductive	20	3	5	5
Motor	100	2	3	3
Lamp	100	1	1	1

*60 Hz loads rated for 10,000 operations

Low Level Switching Capability: With contacts operating a load of 10 to 50 microamperes at 10 to 50 millivolts, the contact resistance miss detection level shall be 100 ohms max. Cycling rate is 1 to 12 per second, for 100,000 operations.

Overload Current — 20 AMPS DC, 30 AMPS 400Hz
Rupture Current — 25 AMPS DC, 40 AMPS 400Hz
Contact Make Bounce —1.0 MILLISECOND AT NOMINAL VOLTAGE
Max. Contact Drop at 5 Amps — INITIAL 0.100 VOLTS
End of Life — 0.125 VOLTS

General Specifications

Temperature Rating —
-70˚C TO + 125˚C

Altitude — 300,000 Feet

Shock* —
Z, Y, & X Enclosures —

FCB-405 Series, 5 Amperes, 4PDT

Product Facts

- **Hermetically Sealed**
- **All Welded Construction**
- **Balanced Force**
- **Permanent Magnet Drive**
- **Contacts rated low level to 5 Amps 28 VDC and 115/200 VAC 400 Hz, 3 Phase**
- **Weight .93 ounces max. (26.4 grams)**
- **Qualified to M83536/5 & /6**

The Series FCB-405 relay is a polarized single-side stable design, where the flux from a permanent magnet provides the armature holding force in the deactivated state, and its flux path is switched and combined with the coil flux in the operated state. This results in appreciably increased contact pressure in both states over that of a spring return nonpolar design. We also manufacture other versions of this relay:

FCB-205 — 5 Amp DPDT Relay

Contact Rating — Amperes Ratings Are Continuous Duty

Type of Load	Life (Min.) Cycles x 10^3	28 VDC	115VAC 400Hz	115/200VAC 400Hz-3Ø
Resistive	100	5	5	5
Inductive	20	3	5	5
Motor	100	2	3	3
Lamp	100	1	1	1

Low Level Switching Capability: With contacts operating a load of 10 to 50 microamperes at 10 to 50 millivolts, the contact resistance miss detection level shall be 100 ohms max. Cycling rate is 1 to 12 per second, for 100,000 operations.

Overload Current — 20 AMPS DC, 30 AMPS 400Hz
Rupture Current — 25 AMPS DC, 40 AMPS 400Hz
Contact Make Bounce —1.0 MILLISECOND AT NOMINAL VOLTAGE
Max. Contact Drop at 5 Amps — INITIAL 0.100 VOLTS
End of Life — 0.125 VOLTS

FCA-210 Series, 10 Amperes, DPDT

Product Facts

- Hermetically Sealed
- All Welded Construction
- Balanced Force
- Permanent Magnet Drive
- Contacts — Silver Cadmium Oxide with Gold Plating
- Coils for DC, 50 to 400Hz and 400Hz AC
- Weight 1.6 ounces max. (45.4 grams)
- Qualified to M83536/9, /10

The Series FCA-210 relay is a polarized single-side stable design, where the flux from a permanent magnet provides the armature holding force in the deactivated state, and its flux path is switched and combined with the coil flux in the operated state. This results in appreciably increased contact pressure in both states over that of a spring return nonpolar design. We also manufacture other versions of this relay:

FCA-410 — 10 Ampere 4PDT Relay

FCA-610 — 10 Ampere 6 PDT Relay

Available:

FCA-215 — 15 Ampere DPDT Relay, Has the same specifications as the FCA-210 except is rated at 15 amps. (Commercial Only)

Contact Rating — Amperes Ratings Are Continuous Duty

FCA-125 Series, 25 Amperes, SPDT

Product Facts

- Hermetically Sealed
- All Welded Construction
- Balanced Force
- Permanent Magnet Drive
- Contacts — Silver Cadmium Oxide with Gold Plating
- Coils for DC, 50 to 400Hz and 400Hz AC
- Weight 1.6 ounces max. (45.4 grams)
- Qualified to M6106/19, M83536/36, /37

The Series FCA-125 relay is a polarized single-side stable design, where the flux from a permanent magnet provides the armature holding force in the deactivated state, and its flux path is switched and combined with the coil flux in the operated state.

This results in appreciably increased contact pressure in both states over that of a spring return nonpolar design. We also manufacture other versions of this relay:

FCA-325 — 25 Ampere 3PDT Relay

FCAC-325 — 25 Ampere 3PST-NO Relay with 2 amp SPDT auxiliary

Contact Rating — Amperes Ratings Are Continuous Duty

Type of Load	Life (Min.) Cycles x 10^3	28 VDC	115VAC 400Hz	115VAC 60Hz*

CII FC-325 Series Relays

Product Facts

- Non-latching Hermetically Sealed Relay
- Corrosion protected metal can
- All welded construction.
- 1.5 inch cube enclosure
- 0.452 lbs
- Excellent for switching harsh inductive, motor, and lamp loads
- -70°C to +125°C temperature range
- 80,000 feet altitude rating
- 28 Vdc or 115 Vac coils
- Solder hook or terminal block configurations
- Qualified to MS27418 specifications
- Higher current ratings than standard M83536 mid-range relays
- 3-Pole 25A Contacts (FORM X) Switching in 1.5 inch^3
- Main contacts are suitable for use in 360-800 Hz variable frequency application

Applications

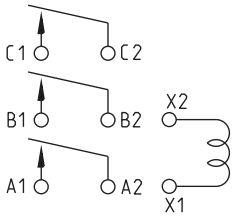

- Launch Systems
- Power Distribution
- Fuel Pumps
- Guidance and Navigation Systems
- Aircraft Galley/Cabin Equipment
- Weapons Systems
- Ground Support Equipment

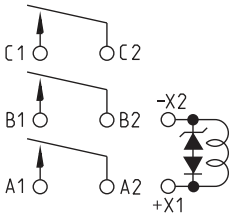

FC-325 Series relays from TE Connectivity (TE) are hermetically sealed devices designed for harsh inductive, motor, and lamp load applications in aerospace, defense, and marine markets.

Configured as a 3PST/NO (DM), the double make/ break contact design of the CII FC-325 Series relays offer higher capability than comparable relays in the market. It shares the load across two contact sets, resulting in less wear and tear on the relay. This provides stable performance and extends the relay's life. The relay's all welded design creates a reliable alternative to similar solder sealed relays in the market.

Circuit Diagram

DC Nonsuppressed and AC Coils

DC Suppressed Coils

General Specifications

Temperature Rating — -70˚C to + 125˚C

Altitude — 80,000 Feet

Shock — 50 g/11 ms

Sinusoidal Vibration — 10 g/5 to 1000 H2

Electrical

Dielectric Strength at Sea Level: Coil to Case — 1250 Vrms

All Other Points — 1500 Vrms

Dielectric Strength at 80,000 ft (25,000 m) — 500 Vrms (all points)

Insulation Resistance at 500 Vdc: Initial — 100 MΩ min.

After Life or Environmental Test — 50 MΩ min.

Contact Voltage Drop at Nominal Current:

Initial Value — 150 mV max.
After Life — 175 mV max.

Operational

Operate Time at Nominal Voltage:
AC — 25 ms max.
DC — 20 ms max.

Release Time at Nominal Voltage:
AC — 50 ms max.
DC — 10 ms max.

Bounce Time at Nominal Voltage — 2 ms max.

FCA-150 Series, 50 Amps, 1PST/NO (DM) Relay

Product Facts

- 50,000 cycles under resistive load
- Corrosion-protected, hermetically sealed metal enclosure
- -70° to +125°C temperature range
- Rated for altitude to 300,000 ft. in high-vibration, high-shock environments
- 1 Form X (SPST-NO-DM) contact
- Meets MIL-PRF-6106 requirements
- 50 A switching capability
- Balanced force design
- One cubic inch in size
- <90 grams total weight
- Non-latching relay
- Available with 1 Form C (SPDT) 2 A auxiliary contact
- 6, 12 and 28 Vdc coils available
- Optional transient suppression

The FCA-150 series relay from TE Connectivity (TE) is a polarized, single-side stable design, where the flux from a permanent magnet provides the armature holding force in the deactivated state, and its flux path is switched and combined with the coil flux in the operated state. This results in appreciably increased contact force in both states over that of a spring return non-polarized design. The FCAC-150 series has a 1 Form C (SPDT) auxiliary contact set rated at 2 A. Designed and built to perform under the most demanding environmental conditions, FCA-150 series relays withstand such changing environmental factors as temperature, altitude, shock, vibration, and salt spray. Minimum mechanical life expectancy is 50,000 cycles under resistive load.

Performance Data

Electrical Characteristics

Initial Insulation Resistance — 100 MΩ, minimum, at 500 Vdc, between each pin and case

Insulation Resistance After Life or Environmental Test — 50 MΩ, minimum, at 500 Vdc, between each pin and case

Dielectric Strength at Sea Level:

Contacts to Ground and Between Contacts — 1250 Vrms, 60 Hz

Coil to Ground — 1000 Vrms, 60 Hz

Dielectric Strength at 80,000 ft (25,000 m) — 500 Vrms, 60 Hz (all points)

Environmental

Ambient Temperature Range, Operating— 70°C to +125°C

Altitude— 300,000 ft

Shock Resistance— 50 G, 11 ms

Vibration Resistance, Sinusoidal— 20 G, 75-3000 Hz

Max. Contact Drop at 10A	Initial 150mV; After Life 175mV			
Operate Time at Nominal Voltage	15ms			
Release Time	15ms			
Bounce Time	1ms			

Coil Data

Coil Code	1	2	3	4
Nominal Operating Voltage (Vdc)	6	12	28	28
Maximum Operating Voltage (Vdc)	7.3	14.5	29	29
Maximum Pick-Up Voltage at +125°C	4.5	9	18	18
Maximum Pick-Up Voltage at +125°C, continuous current test (Vdc)	5.7	11.25	22.5	22.5
Drop-Out Voltage at +125°C	0.3 – 2.5	0.75 – 4.5	1.5 – 7.0	1.5 – 7.0
Maximum Coil Current at +25°C (mA)	.50	.26	.15	.15
Back EMF Suppressed to (Vdc) (Max)	N/A	N/A	N/A	-42
Coil Resistance ±10%	18Ω	70Ω	290Ω	290Ω

FCA-150 Series, 50 Amps, 1PST/NO (DM) Relay (Continued)

Specifications

Electrical Data	
Initial Insulation Resistance (note 1)	100 megohms, minimum, at 500Vdc, between each pin and case
Insulation Resistance After Life or Environmental Test (note 1)	50 megohms, minimum, at 500Vdc, between each pin and case
Dielectric Strength At Sea Level	
Contacts to Ground and Between Contacts	1,250Vrms, 60 Hz.
Coil to Ground	1,000Vrms, 60 Hz.
Dielectric Strength at 80,000 ft (25,000m), All Points (note 4)	500Vrms, 60 Hz
Environmental Data	
Ambient Temperature Range, Operating	-70°C to +125°C
Altitude	300,000 feet
Shock Resistance	50 G's, 11 ms.
Vibration Resistance, Sinusoidal	20 G's, 75-3000Hz.
Mechanical Data	
Approximate Weight	3.2 oz. (90g) Max.

NOTES

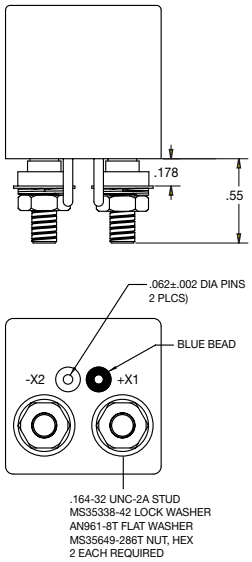

1. All wired terminals must be connected together during this test. Dielectric withstanding voltage and insulation resistance are measured between all mutually insulated wired terminals and between all these terminals and case.

How to Order

FCA-150 - B Y 3

Series And Contact Arrangement

- **FCA-150** 1 Form X Main Contacts
- **FCAC-150** 1 Form X Main Contacts and 1 Form C Auxiliary Contacts

Terminals (see drawings for details)

- **B** Solder Pin Coil Terminals, Stud Power Terminals
- **C** Solder Hook Coil Terminals, Stud Power Terminals
- **K** Terminal Block, Stud Power Terminals

Enclosure (see drawings for details)

- **R** Horizontal Flange Mount, Rotated
- **U** Flush Vertical Flange Mount
- **X** Horizontal Flange Mount
- **Y** Raised Vertical Flange Mount
- **Z** No Mount

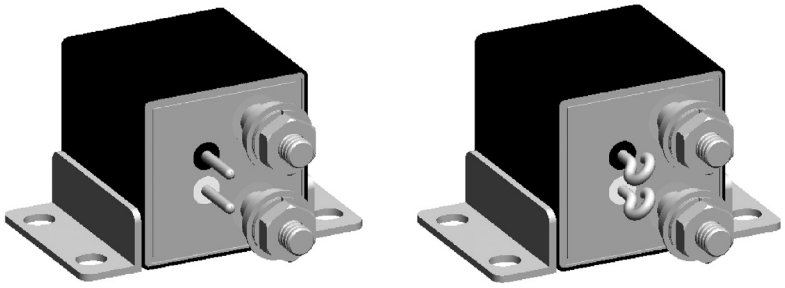

Coil Voltage (NOMINAL)

- **1** 6 VDC
- **2** 12 VDC
- **3** 28 VDC
- **4** 28 VDC Nominal, with Back EMF Suppression

FCA-150NC Series, 50 Amps, 1PST/NC (DB) Relay

Product Facts

- Non latching hermetically sealed relay
- Balanced force design
- Hermetically sealed, corrosion protected metal can
- All welded construction
- 6, 12 and 28Vdc coils available.
- Weight 90 grams
- Designed and built in accordance to MIL-PRF-6106

Specifications

General Characteristics				
Temperature range			-70° C to +125° C	
Altitude			300,000 feet	
Dielectric strength at sea level - Contacts to ground and between contacts - Coil to ground			 1250 Vrms / 60 Hz 1000 Vrms / 60 Hz	
Dielectric strength at altitude 25000 m (80,000 ft) (all points)			500 Vrms / 60 Hz	
Initial insulation resistance at 500 Vdc			100 MΩ min.	
Initial insulation after life or environmental test			50 MΩ min.	
Sinusoidal vibration			20g / 75 to 3000 Hz	
Shock			50g / 11 ms	
Operate time at nominal voltage			15 ms max.	
Release time			15 ms max.	
Bounce time			1 ms max.	
Contact voltage drop at nominal current -initial value -after life			 150 mV max. 175 mV max.

Selection and Application Guide

This selection and application guide is suggested practices from ARP (Aerospace Recommended Practice) 4005 Concerning proper performance of relays.

Caution:
The use of any coil voltage less than the rated coil voltage may compromise the operation of the relay. Choosing the proper relay depends primarily on matching the relay to the load, power supply, and environment. Selection should be limited to items that meet the following requirements:

A. **Contacts** must be rated for the load. Current rating, type of load (resistive, lamp, motor, inductive, and so forth), impedance range, voltage rating, DC or AC, frequency, single phase or polyphase, polyphase load balance, and type of switching or transfer should all be considered. Each of the following switching and transfer functions places a different requirement on each of the relay contacts and must be considered when selecting a relay with the proper contact rating:
(1) On-Off Switching - DC, single phase or polyphase
(2) Motor Reversing (AC or DC)
(3) Transferring load between phases of same source
(4) Transferring load between unsynchronized AC sources

B. **Power supply characteristics** must be taken into account. Voltage regulation, variations in frequency, ripples and spikes, as well as steady state conditions, should be included. If more than one power supply is involved, not only must each be suitable but interaction between them also should be investigated.

C. **Coil (or coils)** should be rated so as to have proper operation under all anticipated conditions.

D. **Consideration of environmental conditions** anticipated throughout the service of life, as well as those expected during storage and transportation before installing the relays in equipment, is mandatory. Electrical parameters, environmental factors, mechanical stresses, and compatibility are among the categories for which the relay must be reviewed.

E. **The circuit in which the relay is used,** the interlocking feature employed, the wiring harness, and the associated components should all be reviewed for assuring mutual suitability.

F. **Relays should be hard wired** whenever possible, to avoid the need for additional contact points associated with the relay plug-in socket arrangement. (Plug-in types should be considered for quick turnaround times).

G. **To permit "safe" isolation** of relay circuit in the OFF condition, and better eliminate an electrical shock hazard, an electromechanical switching device should be placed between the positive terminal of the power source and relay coil.

H. **Proper transistor control** of the relay coil requires a stable |reference voltage. This can be done by connecting the plus side of the coil to the positive side of the power source, the minus side of the relay coil to the collector of an NPN transistor, the emitter of the transistor to the grounded side of the power source, and the transistor base to the control voltage. For example, see MIL-R-28776/1.

I. **Any switching device** controlling the relay coil circuit must be capable of withstanding, without damage, the sum of the maximum coil circuitry voltage and the peak value of transient voltage that results when the coil circuit is opened; for example, a switch controlling a relay coil that is supplied with a 28V DC line and subjected to a transient voltage suppressed to 42V must be capable of withstanding 28V + 42V or a 70V surge without damage.

J. **In selecting solid state electronic switching devices** to control relay coil circuits, care must be used in selecting a solid state device with a leakage current (in the "off state") that is sufficiently low to permit the relay to drop out.

K. **Control of the relay coil circuit** by other than step-function switching may invalidate published relay performance properties such as pickup and dropout voltages, pickup, dropout, and bounce times.

NOTE:
TE Connectivity Does Not Manufacture Relay Sockets.

This Socket to Relay cross reference is provided for additional design assistance. Several of TE Authorized Distributors carry relay sockets for your convenience. Relay sockets come with a variety of profiles, mounting styles, and mounting hardware options, so please contact the relay socket supplier of your choice or one of our Authorized Distributors who carry relay sockets for additional information.

Engineering Notes

DH-14 and DHR-14 Series Contactors, Rated up to 25 Amps, 115/200 VAC, 400 Hz

Product Facts

- 3PDT
- Hermetically sealed
- Auxiliary contacts available
- Meets many requirements of MIL-PRF-6106

Performance Data

Electrical Characteristics

Contact Arrangement — 3PDT

Rated Operating Voltage — 115/200 VAC, 400 Hz

Resistive Rating — 25 Amps

Inductive Rating — 20 Amps

Motor Rating — 15 Amps

General Characteristics

Temperature Range — -55°C to +71°C

Operating Cycles (Life) at Rated Resistive Load, Min. — 50,000 cycles

Operating Cycles (Life) Mechanical, Min. — 100,000 cycles

Dielectric Strength — All Circuits to Ground — 1,500 Vrms
Circuit to Circuit — 1,500 Vrms
Coil to Ground and Aux. Contacts — 1,000 Vrms

Insulation Resistance, Initial — 100 megohm min.

Altitude — 80,000 ft.

Weight, Max. — .41 to .50 lbs

Duty Cycle —
VAC 400 Hz — AC Continuous (Type A, See diagram below)
Vdc — Continuous or continuous with suppression (See diagram B & C below)

Operating Voltage, Nom. —
VAC 400 Hz — 115 VAC
Vdc — 28 Vdc

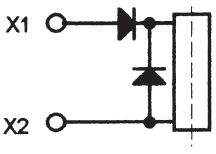

Pickup Voltage @ 25°C, Max. —
VAC 400 Hz — 95 VAC
Vdc — 18 Vdc

Dropout Voltage @ 25°C, Max. —
VAC 400 Hz — 25 VAC
Vdc — 1.5 to 7 Vdc

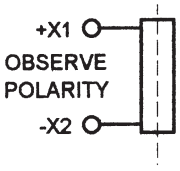

Coil Resistance ±20% @ 25°C —
VAC 400 Hz — N/A
Vdc — 290 Ohms

DHR-18 Series, Rated up to 30 Amps, 115 VAC, 400 Hz

Product Facts

- 3PDT, Center off
- Hermetically sealed

Performance Data

Electrical Characteristics

Contact Arrangement — 3PDT, Center Off

Rated Operating Voltage — 115 VAC, 400 Hz

Resistive Rating — 30 Amps

Inductive Rating — 20 Amps

General Characteristics

Operating Temperature — 71°C

Weight, Max. — 14 oz.

Coil Characteristics

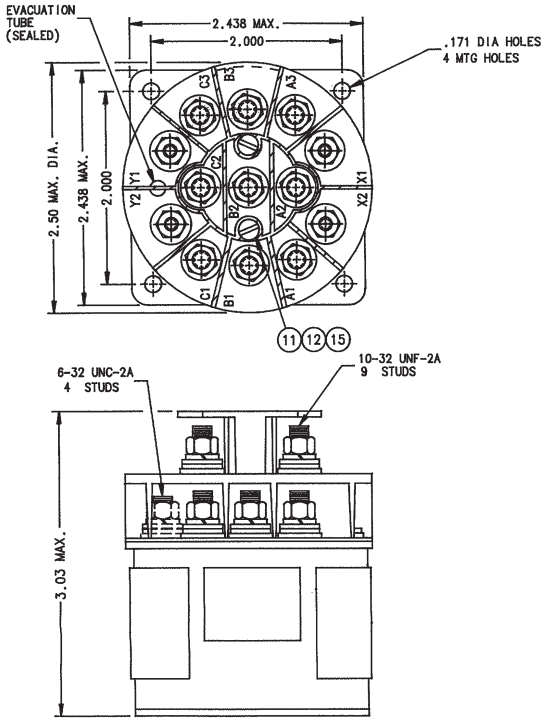

Duty Cycle — Continuous

Coil Rating — 115 VAC, 400 Hz

Pickup Voltage, Max. — 90 Vdc, Hot

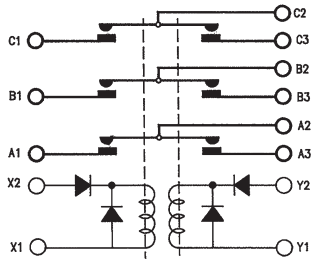

Dropout Voltage — 45 ± 20 Vdc

Current at 115 Vdc & 25°C — 0.28 Amp max.

Mounting Style A

Circuit Configurations (Consult factory for other available circuit configurations)

Circuit Configuration 1

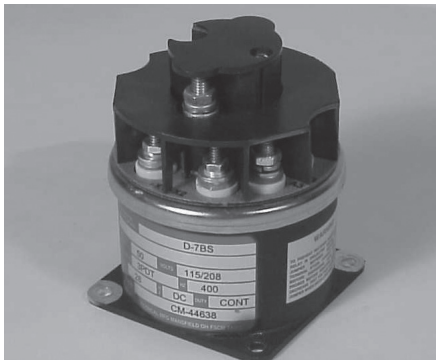

HARTMAN Part Number	Construction Type	Mounting Style	Coil Type	Circuit Config.	TE Part Number
DHR-18-1	Hermetically Sealed	A	Continuous	1	1616050-9

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

D7, DH7, DHR7, DR7 Series, Rated up to 50 Amps, 115/200 VAC, 400 Hz

Product Facts

- 3PDT and 3PST NO
- Gasket sealed or Hermetically sealed
- Auxiliary contacts available
- Meets many requirements of MIL-PRF-6106

Performance Data

Electrical Characteristics

Contact Arrangement — 3PDT and 3PST NO

Rated Operating Voltage — 115/200 VAC, 400 Hz, 3 phase

Resistive Rating — 50 Amps

Inductive Rating — 50 Amps

Motor Rating — 30 Amps

Lamp Rating — 15 Amps

General Characteristics

Temperature Range — -55°C to +71°C

Operating Cycles (Life) at Rated Resistive Load, Min. — 50,000 cycles

Operating Cycles (Life) Mechanical, Min. — 100,000 cycles

Dielectric Strength —
All Circuits to Ground — 1,500 Vrms
Circuit to Circuit — 1,500 Vrms
Coil to Ground and Aux. Contacts — 1,000 Vrms

Insulation Resistance, Initial — 100 megohm min.

Altitude —
D7, DR7 — 50,000 ft
DH7, DHR7 — 80,000 ft

Weight, Max. — .94 to 1.20 lbs

Coil Characteristics

Duty Cycle —
VAC 400 Hz — AC Continuous (Type A & E, See diagram below)
Vdc — Continuous (Type B, See diagram below)
Vdc — Continuous with suppression (Type C & D, See diagram below)

Operating Voltage, Nom. —
VAC 400 Hz — 115 VAC
Vdc — 28 Vdc

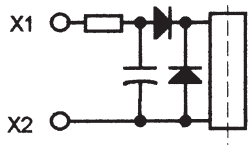

Pickup Voltage @ 25°C, Max. —
VAC 400 Hz — 75 VAC
Vdc — 18 Vdc

Dropout Voltage @ 25°C, Max. —
VAC 400 Hz — 12 to 38 VAC
Vdc — 1 to 7 Vdc

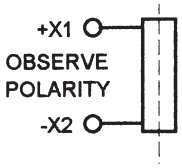

Coil Resistance ±20% @ 25°C —
VAC 400 Hz — 505 Ohms
Vdc — 126 Ohms

Coil Current @ 25°C, Max. —
VAC 400 Hz — .065 Amp
Vdc — .28 Amp

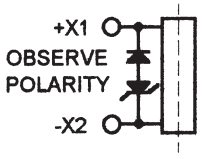

Coil Type

A — AC Continuous

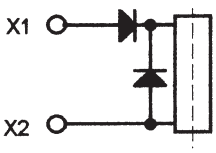

B — Continuous

C — Continuous with Suppression

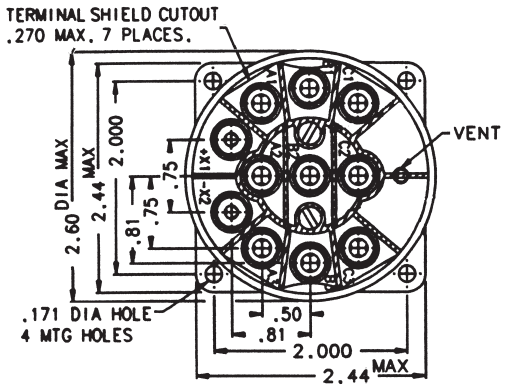

D — Continuous with Suppression

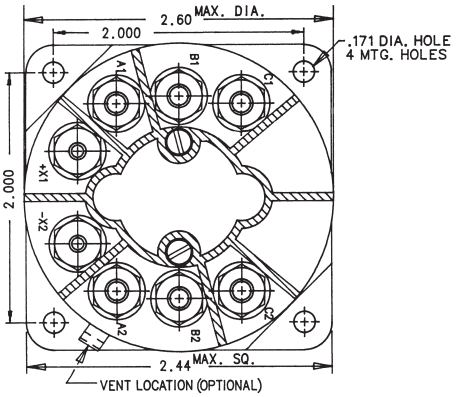

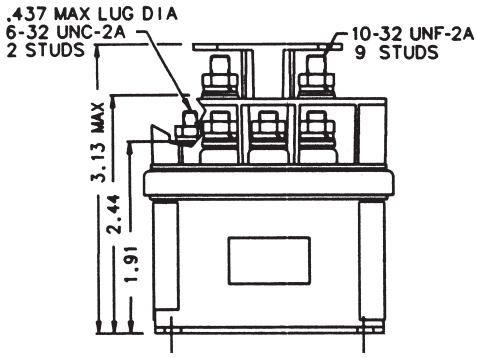

E — AC Continuous

Electrical Characteristics

Contact Arrangement — 3PDT, Center Off

Rated Operating Voltage — 115/200 VAC, 400 Hz, 3 phase

Resistive Rating — 100 Amps

General Characteristics

Temperature Range — -55°C to +71°C

Operating Cycles (Life) at Rated Resistive Load, Min. — 50,000 cycles

Operating Cycles (Life) Mechanical, Min. — 100,000 cycles

Dielectric Strength — All Circuits to Ground — 1,500 Vrms
Circuit to Circuit — 1,500 Vrms
Coil to Ground and Aux. Contacts — 1,000 Vrms

Altitude — 50,000 ft

Weight, Max. — 2.31 lbs

Coil Characteristics

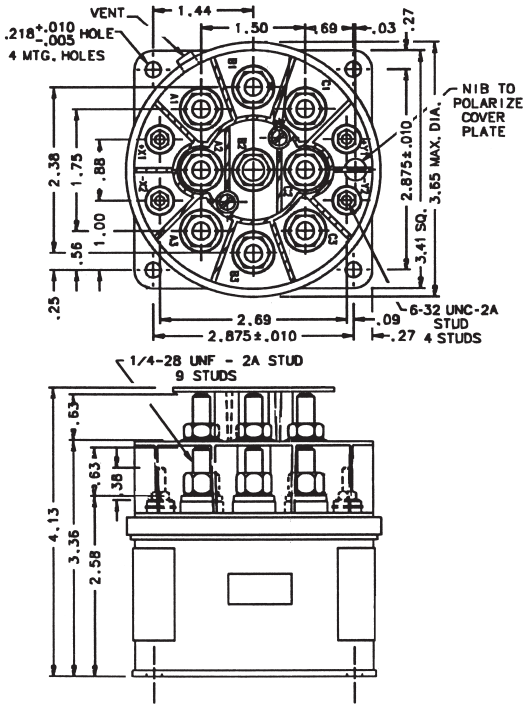

Duty Cycle — Continuous

Operating Voltage, Nom. — 28 Vdc

Pickup Voltage @ 71°C, Max. — 18 Vdc

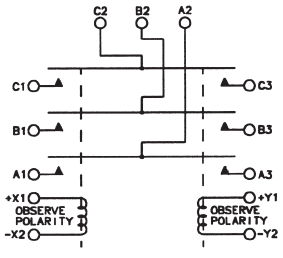

Dropout Voltage, Max. — 1.5 to 7 Vdc

Coil Resistance ±20% @ 25°C — 160 Ohms

Mounting Style A

Circuit Configurations (Consult factory for other available circuit configurations)

Circuit Configuration 1

HARTMAN Part Number	Construction Type	Mounting Style	Coil Type	Circuit Config.	TE Part Number
D-31C	Gasket/Vented	A	Continuous	1	1616049-1

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

D-31, DH-31, and DHL-31 Series, Rated up to 120 Amps, 115/200 VAC, 400 Hz

Product Facts

- 3PDT, Center off
- Gasket sealed or Hermetically sealed
- Auxiliary contacts available
- Meets many requirements of MIL-PRF-6106

Performance Data

Electrical Characteristics

Contact Arrangement — 3PDT, Center Off

Rated Operating Voltage — 115/200 VAC, 400 Hz, 3 phase

Resistive Rating — 120 Amps

Inductive Rating — 120 Amps

Motor Rating — 80 Amps

Rupture Rating — 1,000 Amps

General Characteristics

Temperature Range — -55°C to +71°C

Operating Cycles (Life) at Rated Resistive Load, Min. — 50,000 cycles

Operating Cycles (Life) Mechanical, Min. — 100,000 cycles

Dielectric Strength — All Circuits to Ground — 1,500 Vrms
Circuit to Circuit — 1,500 Vrms
Coil to Ground and Aux. Contacts — 1,000 Vrms

Altitude — D-31 — 50,000 ft
DH-31, DHL-31 — 70,000 ft

Weight — 2.60 lbs

Coil Characteristics

Duty Cycle — Continuous (Type A, See diagram below)
Continuous with suppression (Type B or Type C, See diagram below)

Operating Voltage, Nom. — 28 Vdc

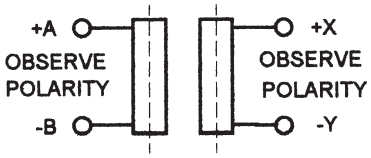

Pickup Voltage @ 25°C, Max. — Coil Type A and C — 18 Vdc
Coil Type B — 15 Vdc

Dropout Voltage @ 25°C, Max. — Coil Type A and C — 1.5 to 7 Vdc
Coil Type B — 2 to 7 Vdc

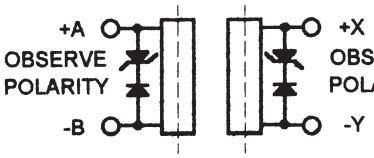

Coil Resistance ±20% @ 25°C — Coil Type A — N/A
Coil Type B — 100 Ohms
Coil Type C — 132 Ohms

Coil Current @ 25°C, Max. — .350 Amp

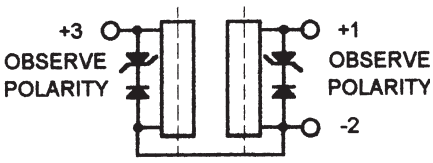

Coil Type

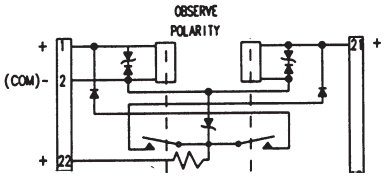

A — Continuous

B — Continuous with Suppression

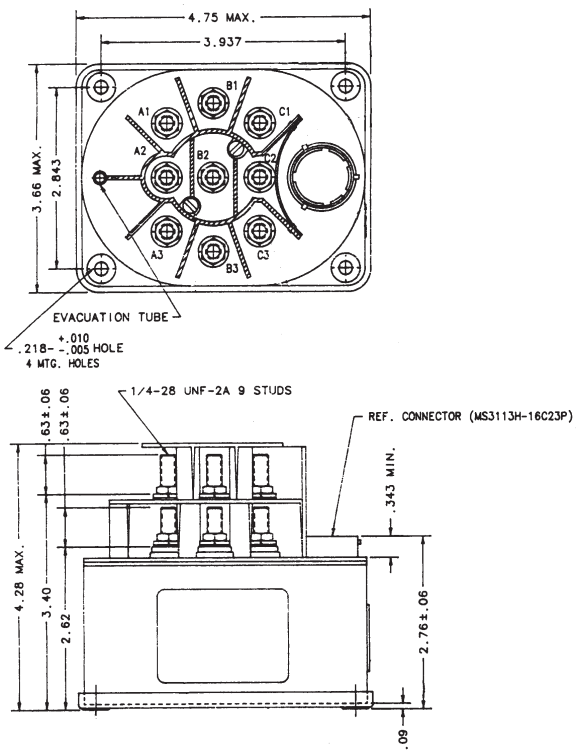

C — Continuous with Suppression

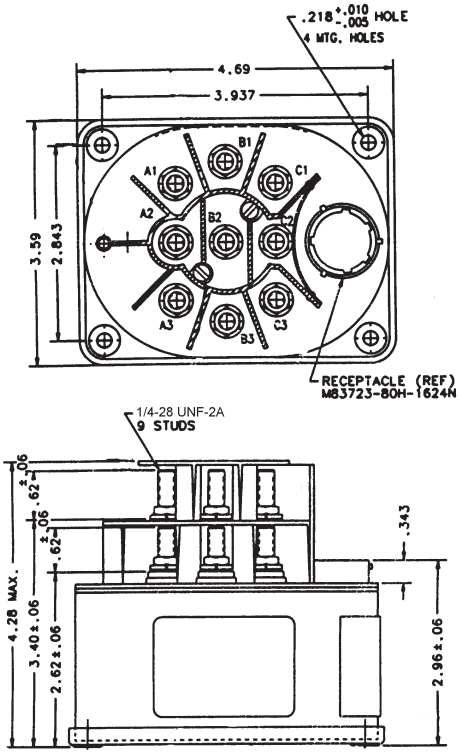

D — Latching

B309 Series, Rated up to 130 Amps, 115 VDC

Product Facts

- **3PST NO, Single break main contacts**
- **2PDT Auxiliary contacts (note 1)**
- **Gasket sealed**
- **Meets many requirements of MIL-PRF-6106**

Performance Data

Electrical Characteristics

Contact Arrangement — 3PST NO, Single Break

Rated Operating Voltage — 115 VDC

Resistive Currant Rating — 130 Amps (see note 2)

Rupture Rating — 1300 Amps (see note 3)

General Characteristics

Temperature Range — -55°C to +85°C

Minimum Electrical Cycles — 50,000

Minimum Mechanical Cycles — 100,000 @ 32.5 A

Dielectric Strength — 1500 Vrms

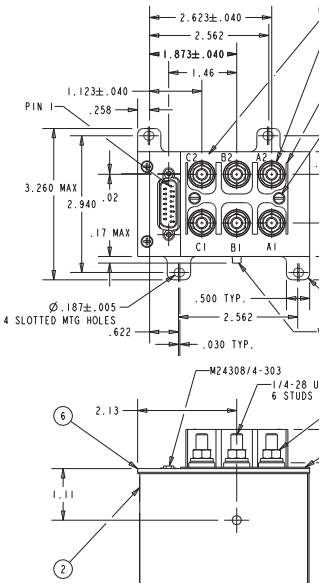

Altitude — 50,000 ft

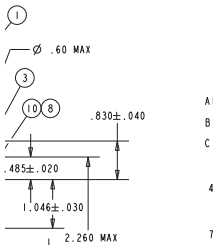

Weight, Max. — 1.35 lbs

Duty Cycle — Continuous (Electronically Economized)

Coil Operating Voltage — 28 Vdc

Drop Out Voltage — 1.5 to 7 Vdc

HARTMAN Part Number	Construction Type	Mounting Style	Coil Type	Circuit Config.	TE Part Number
B309A	Gasket Sealed	A	Continuous, Electronically Economized	1	1-1616975-7

NOTES

1. Other aux contact configurations available. Consult Factory.

2. Units with current ratings to 175A are available. Consult Factory.

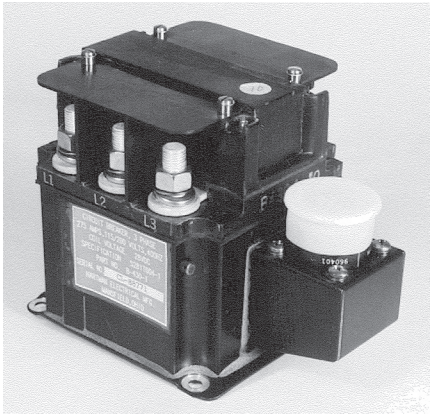

3. Units with rupture ratings to 1750A are available. Consult Factory.

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

B-451 Series, Rated up to 175 Amps, 115/200 VAC, 400 Hz

Product Facts

- 3PDT, Magnetic latching
- Gasket sealed
- Auxiliary contacts available
- Meets many requirements of MIL-PRF-6106

Performance Data

Electrical Characteristics

Contact Arrangement — 3PDT, Magnetic Latching

Rated Operating Voltage — 115/200 VAC, 400 Hz

Resistive Rating — 175 Amps

General Characteristics

Temperature Range — -55°C to +71°C

Operating Cycles (Life) at Rated Resistive Load, Min. — 50,000 cycles

Operating Cycles (Life) Mechanical, Min. — 100,000 cycles

Dielectric Strength —
All Circuits to Ground — 1,500 Vrms
Circuit to Circuit — 1,500 Vrms
Coil to Ground and Aux. Contacts — 1,000 Vrms

Insulation Resistance, Initial — 100 megohm min.

Altitude — 50,000 ft.

Weight, Max. — 2.44 lbs

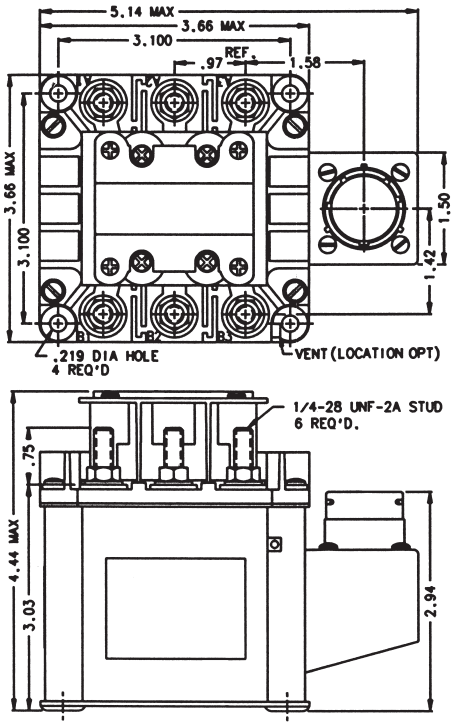

Coil Characteristics

Duty Cycle — Continuous, self-deenergizing

Operating Voltage, Max. — 30 Vdc

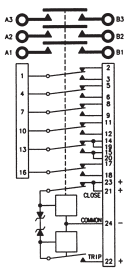

Close Voltage @ 15 to 30 Vdc —
Resistance — 4.4 +10% Ohms
Current — 5 Amp Max.

Trip Voltage @ 15 to 30 Vdc —
Resistance — 5.0 +10% Ohms
Current — 5 Amp Max.

Mounting Style A

K Series Connectors

Product Facts

- Light weight
- Small package size
- Small footprint
- Easy to package in panel assemblies
- Buss bar mount or chassis mount
- Designed to meet the applicable portions of MIL-PRF-6106
- 10X rupture current

TE HARTMAN brand of K Series contactors offer outstanding performance and reliability in a highly efficient package. The HARTMAN brand K-Series are among the smallest and lightest 200-1000 ampere DC contactors available in the aerospace industry.

These highly flexible buss bar mounted or chassis mounted units are designed for either continuous or start duty applications in the DC power distribution systems of military and commercial aircraft and ground vehicles.

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

K Series, Rated up to 200 Amps, 28 Vdc

Product Facts

- Among the smallest and lightest 200 A aerospace-quality contactors available
- High-quality materials to help withstand harsh environments
- Environmentally sealed
- -55° to +85°C temperature range
- Shock and vibration resistant
- SPST, normally open
- 28 Vdc
- 200 A make/carry/break
- 1200 A inrush
- 2000 A maximum interrupt
- Electronically economized to reduce power

Standards/Specifications

MIL-PRF-6106P — General Performance Specification for Electromechanical Relays

MIL-STD-202H — Test Method for Electronic and Electrical Component Parts

RTCA/DO-160F — Environmental Conditions and Test Procedures for Airborne Equipment

Performance Data

Electrical Characteristics

Main Contacts — 28 VDC SPST Normally Open, Double Make

Auxiliary Contacts — two-pole, double-throw

Economizer — Electronically controlled

Full Rupture Capability — 2000 A (50 cycles per MIL-PRF-6106)

Electrical Life —
Full Rated Resistive Load — 50,000 cycles
25% Rated Resistive Load — 100,000 cycles

Altitude — 50,000 feet max.

Current — Resistive Load: 200 A
Motor Load — 1200 A/200 A (inrush/carry)
Rupture: 2000 A

General Characteristics

Operating Temperature — 55°C to +85˚C

Weight —
K200A1C: 0.33 lbs (150 g)
K200B1C: 0.29 lbs (132 g)
K200A3C: 0.43 lbs (195 g)
K200B3C02: 0.40 lbs (181 g)

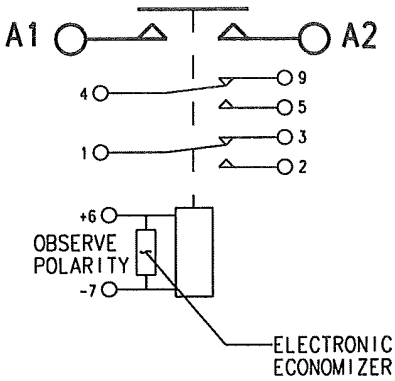

Coil Characteristics

Nom. Operate Voltage — 28 Vdc
Pickup Voltage — 18 Vdc max.
Drop Voltage — 1–9 Vdc
Pickup Time — 15 ms
Dropout Time — 15 ms

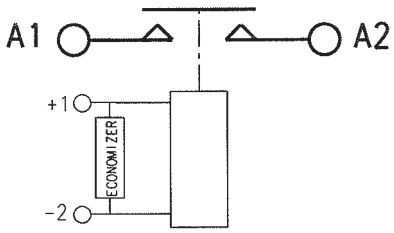

Coil Current —
Inrush — 5 A max. at 28 Vdc and 25°C
Holding — 300 mA max. at 28 Vdc and 25°C
Suppression — 45 Vdc

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

K400 Series, Rated up to 400 Amps, 28 Vdc

Product Facts

- SPST NO, Double break
- Buss bar or chassis mount design
- Gasket sealed
- Auxiliary contacts available
- Meets many requirements of MIL-PRF-6106

Performance Data

Electrical Characteristics

Contact Arrangement — SPST NO, Double Break

Rated Operating Voltage — 28 Vdc

Resistive Rating — 400 Amps

Overload Rating — 3,200 Amps

Rupture Rating — 4,000 Amps

General Characteristics

Temperature Range — -40°C to +85°C

Operating Cycles (Life) at Rated Resistive Load, Min. — 50,000 cycles

Operating Cycles (Life) Mechanical, Min. — 100,000 cycles

Dielectric Strength — All Circuits to Ground — 1,250 Vrms
Circuit to Circuit — 1,250 Vrms
Coil to Ground and Aux. Contacts — 1,000 Vrms

Altitude, Max. — 50,000 ft.

Weight, Max. — .59 -.75 lbs

Coil Characteristics

Duty Cycle — Economized with suppression (Type A, See diagram below), Continuous (Type B, See diagram below), Intermittent (Type C, See diagram below)

Operating Voltage, Nom. — 28 Vdc

Pickup Voltage @ 250°C, Max. — 18 Vdc - Economized and continuous duty coil

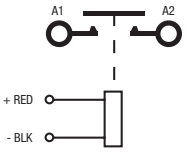

12 Vdc - Intermittent duty coil

Dropout Voltage, Max. —

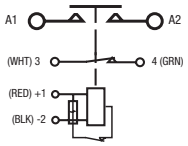

7 Vdc - Economized and continuous duty

5 Vdc - Intermittent duty coil

K400 Series, Rated up to 400 Amps, 28 Vdc

Product Facts

- **1.88 to 2 lbs. (854 to 908 grams) depending on style selected**
- **< 30 cubic inches (490 cm³) volume**
- **400 A make/carry/break**
- **4000 A rupture**
- **28 VDC**
- **One NO and one NC**
- **Electronically economized to reduce power**
- **Configuration flexibility**
- **Multiple mounting options**
- **-55°C to +70°C operating temperature range**
- **Meets applicable requirements of MIL-PRF-6106M**

Performance Data

Electrical Characteristics

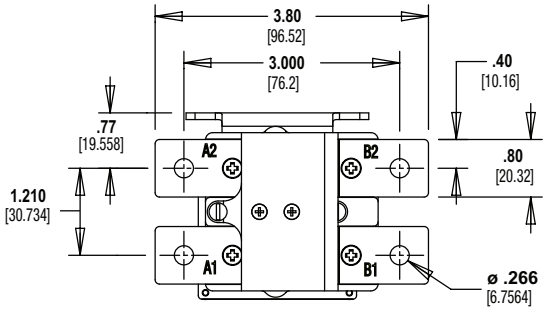

Main Contacts —
Configuration — One NO and one NC
Voltage — 28 VDC
Current (Resistive Load) — 400 A
Rupture Current — 4000 A
Voltage Drop — 150 mV max.
Auxiliary Contacts —
Configuration — SPDT
Number of Auxiliary Contacts — 1 to 3
Voltage — 28 VDC
Current:
Resistive Load — 5 A
Inductive Load — 1 A
Bounce — 5 ms at 28 VDC, 25°C
Dielectric Withstand — 1000 Vrm

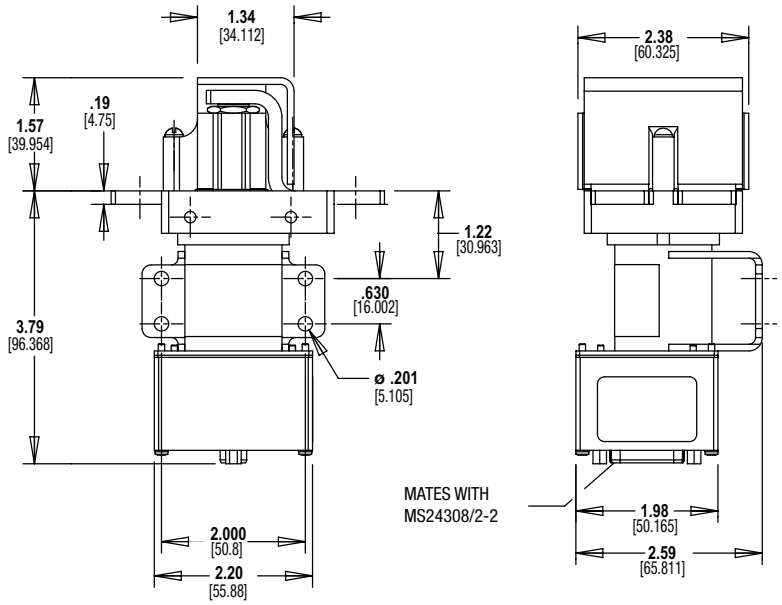

General Characteristics

Operating Temperature — -55°C to +70°C
Ground Survivability Temperature — -55°C to +85°C
Altitude — 55,000 ft.
Decompression — 55,000 ft.
Electrical Life — 50,000 cycles
Mechanical Life — 100,000 cycles
Mounting Styles — Chassis, captive screw, or bus bar
Weight — 1.88 to 2 lb. (854 to 908 g) depending on style

Coil Characteristics

Duty Cycle — Continuous (Electronic Economized)
Pickup Voltage — 18 VDC nom., 20 VDC max. at 85°C
Max. Operating Voltage — 32 VDC
Dropout Voltage — 1.5 to 7 VDC
Inrush Current — 12 A max. (100 ms)
Pickup and Dropout Time — 25 ms at 25°C
Suppression — ±42 V

Style	Description	Part No.
Chassis Mount	KD400A7C	1616986-6
Bus Mount	KD400B2C2	1-1616989-7

K500 Series, Rated up to 500 Amps, 28 Vdc

Product Facts

- SPST NO, Double break
- Buss bar or chassis mount designs
- Gasket sealed
- Multiple auxiliary contact choices
- Meets many requirements of MIL-PRF-6106

Performance Data

Electrical Characteristics

Main Contacts —

Contact Arrangement — SPST NO, Double Break

Rated Operating Voltage — 28 Vdc

Resistive Rating — 500 Amps

Rupture Rating — 5,000 Amps

Auxiliary Contacts —

Aux. Contact Arrangement — 3 SPDT

Rated Operating Voltage — 28 Vdc

Resistive Rating — 5 Amps

Lamp Rating — 1 Amps

Low Level — 1 mA @ 28 Vdc

General Characteristics

Temperature Range — -55°C to +85°C

Operating Cycles (Life) at Rated Resistive Load — 50,000 cycles

Operating Cycles (Life) Mechanical — 100,000 cycles

Altitude — 50,000 ft.

Weight, Max. — .88 lbs

Operate Time @ 18 Vdc & 85°C, Max. — 45 msec

Dropout Time @ 32 Vdc, Max. — 25 msec

Coil Characteristics

Duty Cycle — Continuous, economizing

Operating Voltage, Nom. — 28 Vdc

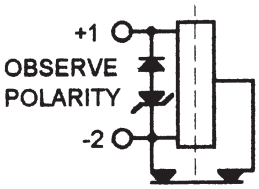

Pickup Voltage, Max. — 18 Vdc

Dropout Voltage — 1 to 7 Vdc

Inrush — 5 Amps

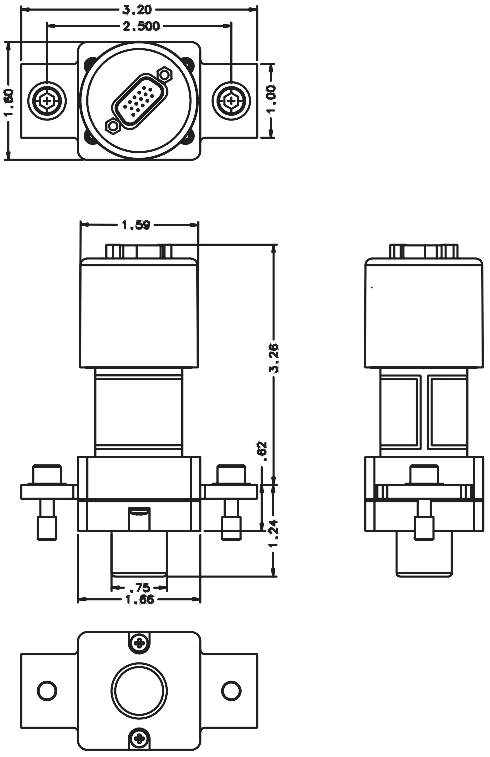

Hold @ 32 Vdc & -55°C — 0.272 mA max.

K Series, Rated up to 500 Amps, 28 Vdc — Time Delay

Product Facts

- **SPST NO, Double break**
- **Delay on operator or release**
- **Chassis Mount (bus bar mount available)**
- **Gasket sealed**
- **Meets many requirements of MIL-PRF-6106**

Performance Data

Electrical Characteristics

Contact Arrangement — SPST NO, Double Break

Rated Operating Voltage — 28 VDC

Resistive Rating — 500A

Rupture Rating — 5000A

Delay on operate or release — See note 1

General Characteristics

Temperature Range — -55°C to +85°C

Minimum Electrical Cycles — 50,000

Minimum Mechanical Cycles — 100,000 @ 125A

Dielectric Strength — 1000 Vrms

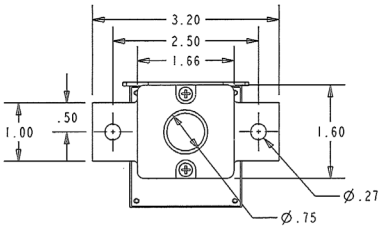

Altitude — 50,000 ft

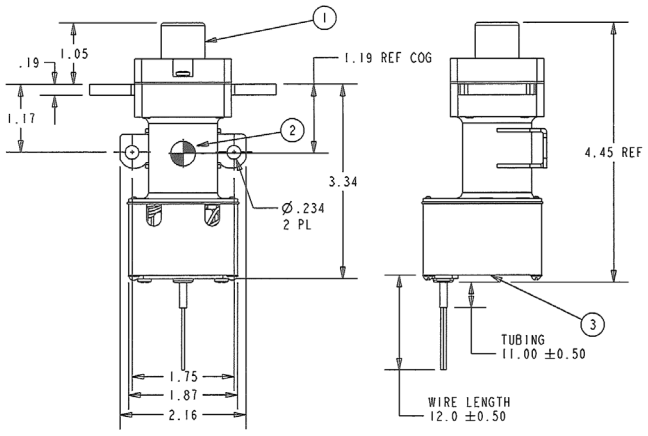

Weight, Max. — 1.0 lbs

Duty Cycle — Intermittent or Continuous (See note 2)

Operating Voltage Range — 21 - 32 Vdc

Drop Out Voltage — 1 to 7 Vdc

NOTES

1. Delay can be tailored to meet customer need. Consult Factory.
2. Intermittent duty coil is recommended for starting applications where significant control voltage sags are possible. Consult factory to specify correct coil duty for your application.

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

DH-14 and DH-21 Series, Rated up to 25 Amps, 28 Vdc

Product Facts

- SPDT, 1 NO, 1 NC, Double Break
- Hermetically Sealed
- DH21 Series has magnetically latched contacts
- Meets many requirements of MIL-PRF-6106

Performance Data

Electrical Characteristics

Contact Arrangement — SPDT, 1 NO, 1 NC, Double Break

Rated Operating Voltage — 28 Vdc

Resistive Rating — 25 Amps

Inductive Rating — 25 Amps

Motor Rating — 15 Amps

General Characteristics

Temperature Range — -55°C to +71°C

Operating Cycles (Life) at Rated Resistive Load, Min. — 50,000 cycles

Operating Cycles (Life) Mechanical, Min. — 100,000 cycles

Dielectric Strength — All Circuits to Ground — 1,250 Vrms
Circuit to Circuit — 1,250 Vrms
Coil to Ground and Aux. Contacts — 1,000 Vrms

Altitude Max. — 80,000 ft.

Weight — .39 lbs

Coil Characteristics

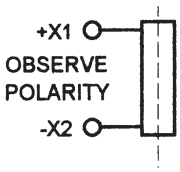

Duty Cycle — Continuous (Type A, See diagram below), Continuous with suppression (Type B, See diagram below) or Intermittent (Type C)

Operating Voltage, Nom. — 28 Vdc

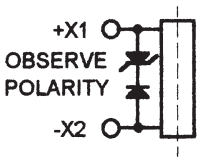

Pickup Voltage @ 25°C, Max. — 18 Vdc

Dropout Voltage @ 25°C, Max. — 1.0 to 7 Vdc

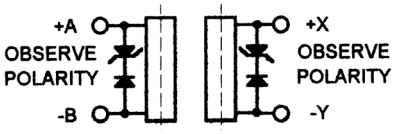

Coil Type

A — Continuous

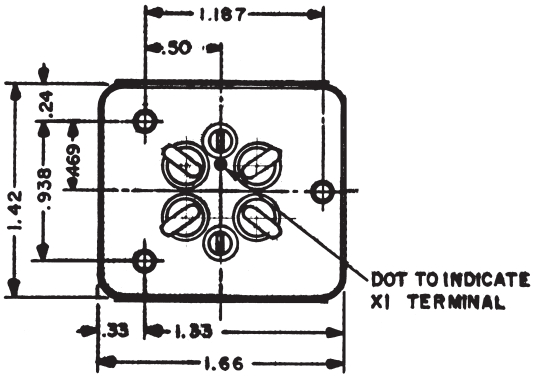

B — Continuous with Suppression

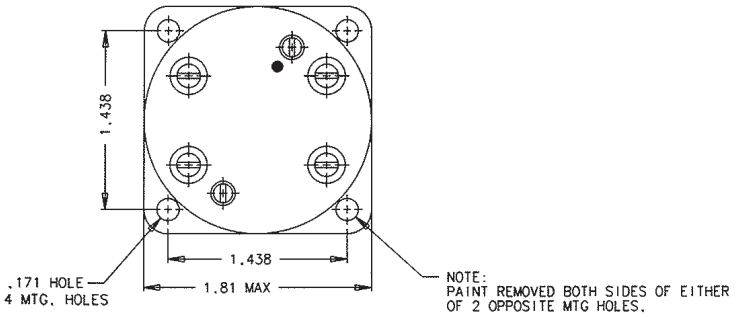

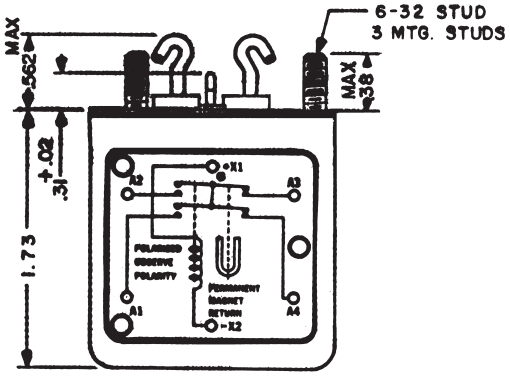

C — Intermittent

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

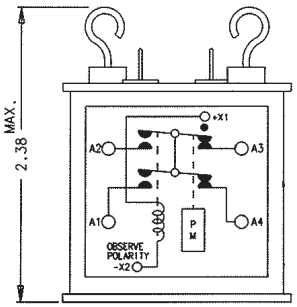

DH-14 and DH-21 Series, Rated up to 25 Amps, 28 Vdc (Continued)

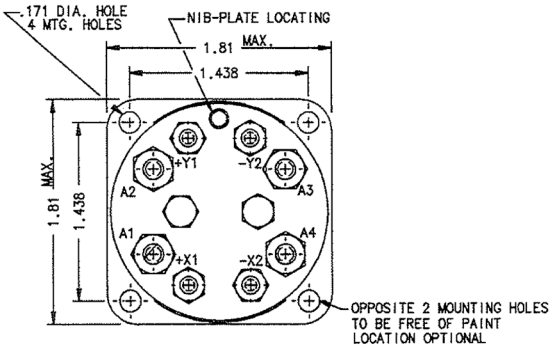

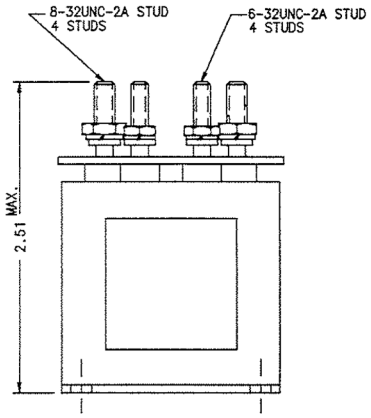

Mounting Style A

Mounting Style B

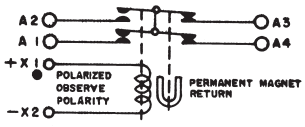

Mounting Style C

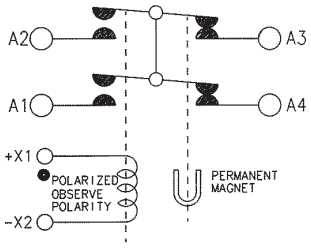

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

DH-14 and DH-21 Series, Rated up to 25 Amps, 28 Vdc (Continued)

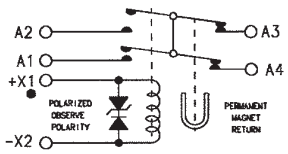

Circuit Configurations (Consult factory for other available circuit configurations)

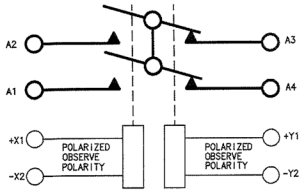

Circuit Configuration 1

Circuit Configuration 2

Circuit Configuration 3

Circuit Configuration 4

HARTMAN Part Number	Construction Type	Mounting Style	Coil Type	Circuit Config.	TE Part Number
DH-14A	Hermetically Sealed	A	A	1	1616089-1
DH-14AL	Hermetically Sealed	B	A	2	1616089-2
DH-14AT	Hermetically Sealed	A	B	3	1616089-3
DH-21N*	Hermetically Sealed	C	C	4	1616026-2

*DH21N is a magnetically latched unit. Contacts will remain in position until the opposing coil is pulsed.

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

D-7, DH-7 and DH-18 Series, Rated up to 50 Amps, 28 Vdc

Product Facts

- 2 SPST, 1 NO, 1 NC
- DH-18 Series are center-off double-throw units
- Gasket Sealed or Hermetically Sealed
- Auxiliary contacts available
- Meets many requirements of MIL-R-6106

Performance Data

Electrical Characteristics

Contact Arrangement — 2 SPST, 1 NO, 1 NC, Electrically Latched

Rated Operating Voltage — 28 Vdc

Resistive Rating — 50 Amps

Inductive Rating — 25 Amps

General Characteristics

Temperature Range — -55°C to +71°C

Operating Cycles (Life) at Rated Resistive Load, Min. — 50,000 cycles

Operating Cycles (Life) Mechanical, Min. — 100,000 cycles

Dielectric Strength — All Circuits to Ground — 1,500 Vrms
Circuit to Circuit — 1,500 Vrms
Coil to Ground and Aux. Contacts — 1,000 Vrms

Altitude Max. — 50,000 ft.

Weight — .72 to .94 lbs

Coil Characteristics

Duty Cycle — Continuous (Type A, See diagram below) or Continuous with suppression (Type B, See diagram below) or Continuous (Type C)

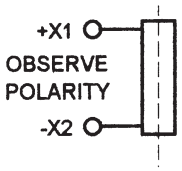

Operating Voltage, Nom. — 28 Vdc

Pickup Voltage @ 25°C, Max. — 18 Vdc

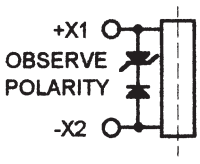

Dropout Voltage @ 25°C, Max. — 1.5 to 7 Vdc

Coil Current @ 25°C, Max. — 0.28 Amp

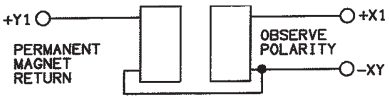

Coil Type

A — Continuous

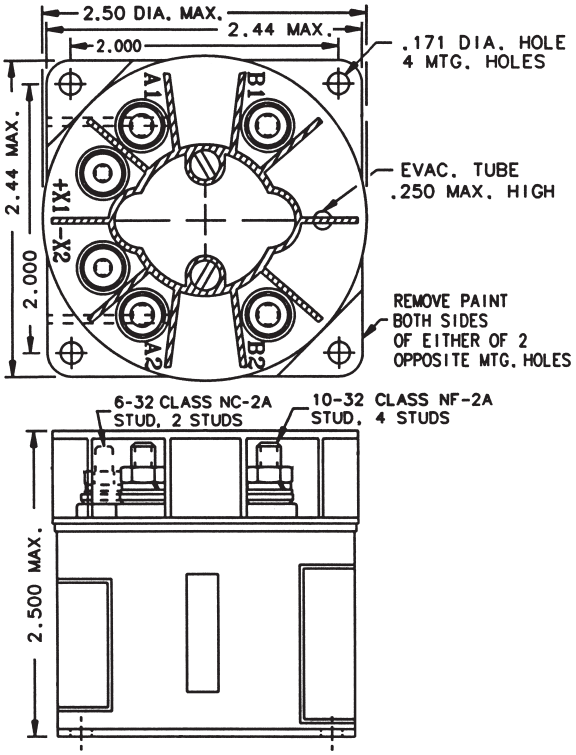

B — Continuous with Suppression

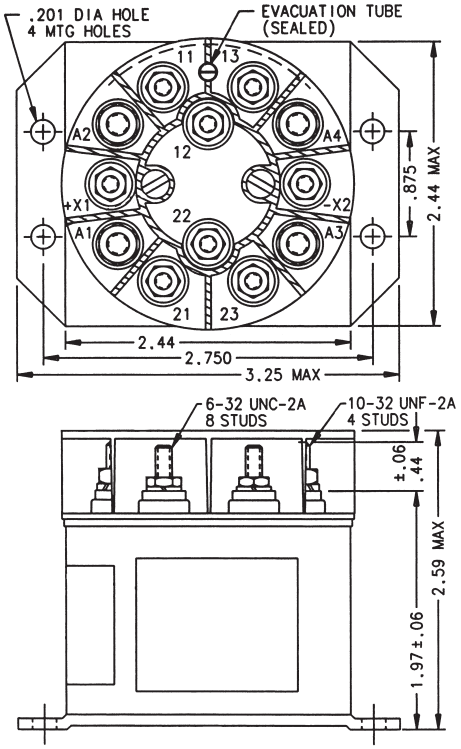

C — Continuous

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

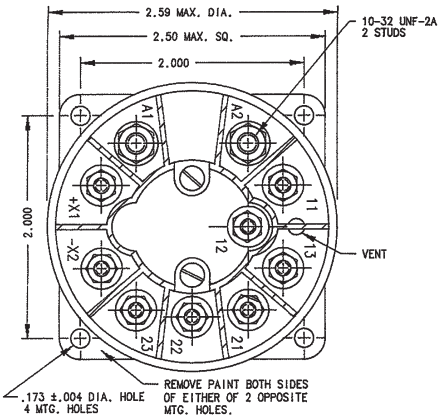

D-7, DH-7 and DH-18 Series, Rated up to 50 Amps, 28 Vdc (Continued)

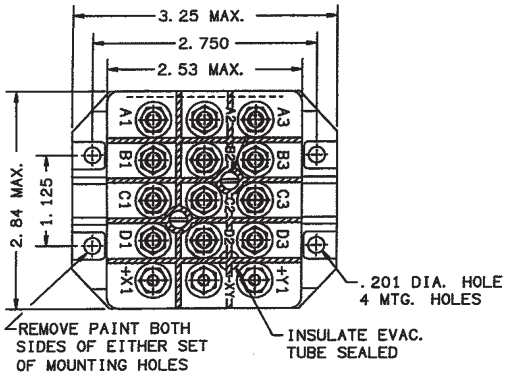

Mounting Style A

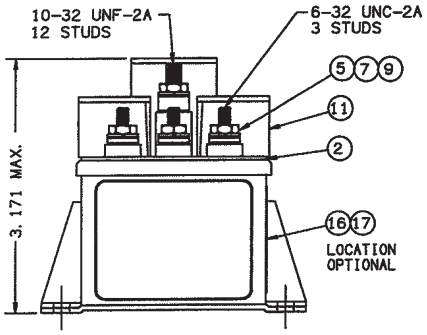

Mounting Style B

Mounting Style C

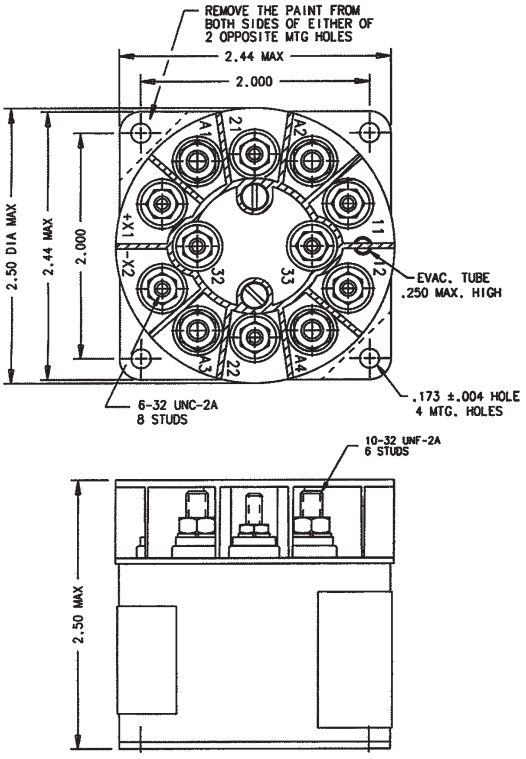

Mounting Style D

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

D-7, DH-7 and DH-18 Series, Rated up to 50 Amps, 28 Vdc (Continued)

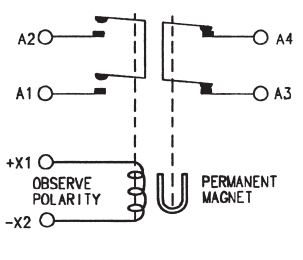

Mounting Style E

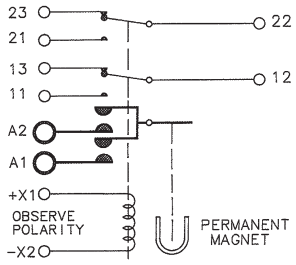

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

D-7, DH-7 and DH-18 Series, Rated up to 50 Amps, 28 Vdc (Continued)

D-31 Series, Rated up to 100 Amps, 28 Vdc

Product Facts

- SPDT, Center Off, Double Break
- Gasket Sealed, Vented
- Meets many requirements of MIL-PRF-6106

Performance Data

Electrical Characteristics

Main Contacts —

Main Contact Configuration — SPDT, Center Off, Double Break

Voltage, Nom. — 28 Vdc

Resistive Rating — 100 Amps

Inductive Rating — 100 Amps

Motor Rating — 80 Amps

Overload Rating — 800 Amps

Rupture Rating — 1,000 Amps

Auxiliary Contacts —

Aux. Contact Configuration — SPST, NO

Voltage, Nom. — 115 VAC, 400 Hz or 28 Vdc

Resistive Rating — 3 Amp

Inductive Rating — 3 Amp

Lamp Rating — 1 Amp

General Characteristics

Temperature Range — -55°C to +71°C

Operating Cycles (Life) at Rated Resistive Load, Min. — 50,000 cycles

Operating Cycles (Life) Mechanical, Min. — 100,000 cycles

Altitude — 50,000 ft.

Weight, Max. — 1 lb 15 oz

Coil Characteristics

Duty Cycle — Continuous

Coil Data, X Coil —

Operating Voltage, Nominal — 115 VAC, 400 Hz

Pickup Voltage @ 25°C, Max., Initial — 75 VAC, 400 Hz

Dropout Voltage @ 25°C — 12 V to 38 V

Coil Resistance ±20% @ 25°C — 655 Ohms

Coil Current @ 25°C — .050 Amp DC AV @ 115 VAC, 400 Hz

Coil Data, Y Coil —

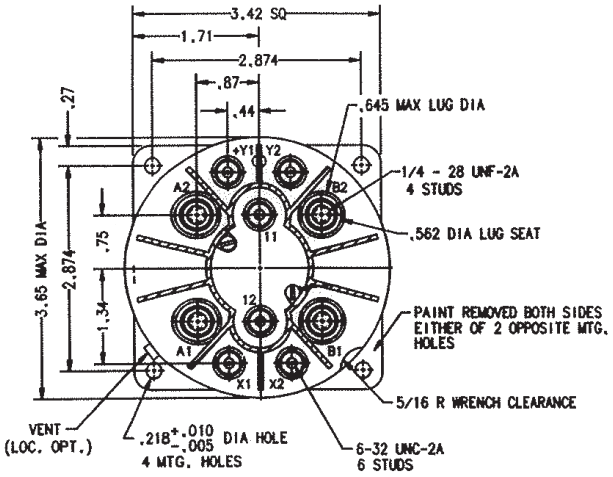

Operating Voltage, Nominal — 28 Vdc

Pickup Voltage @ 25°C, Max., Initial — 15 VDC

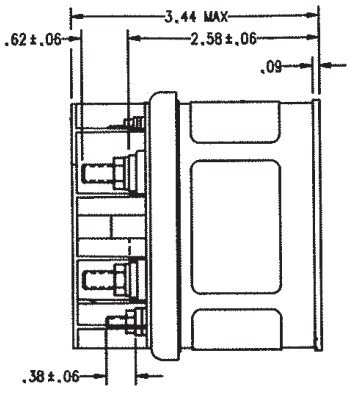

Dropout Voltage @ 25°C — 2.0 V to 6.5 V

Coil Resistance ±20% @ 25°C — 163 Ohms

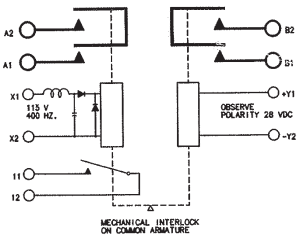

Coil Current @ 25°C — .215 Amp Max. @ 28 Vdc

A-848 Series, Rated up to 300 Amps, 24/48 Vdc

Product Facts

- SPST NO, DPST NC, Double break
- Gasket sealed
- Meets many requirements of MIL-PRF-6106
- Designed for series/parallel starting systems

Performance Data

Electrical Characteristics

Contact Arrangement — SPST NO, DPST NC, Double Break

Rated Operating Voltage — 24/48 Vdc

Resistive Rating — 300 Amps

Inrush for 30 sec — 1,100 Amps

Inrush — 700 Amps

General Characteristics

Temperature Range — -55°C to +71°C

Operating Cycles (Life) at Rated Resistive Load, Min. — 50,000 cycles

Operating Cycles (Life) Mechanical, Min. — 100,000 cycles

Dielectric Strength — All Circuits to Ground — 1,250 Vrms
Circuit to Circuit — 1,250 Vrms
Coil to Ground and Aux. Contacts — 1,000 Vrms

Weight — 3.5 lbs

Coil Characteristics

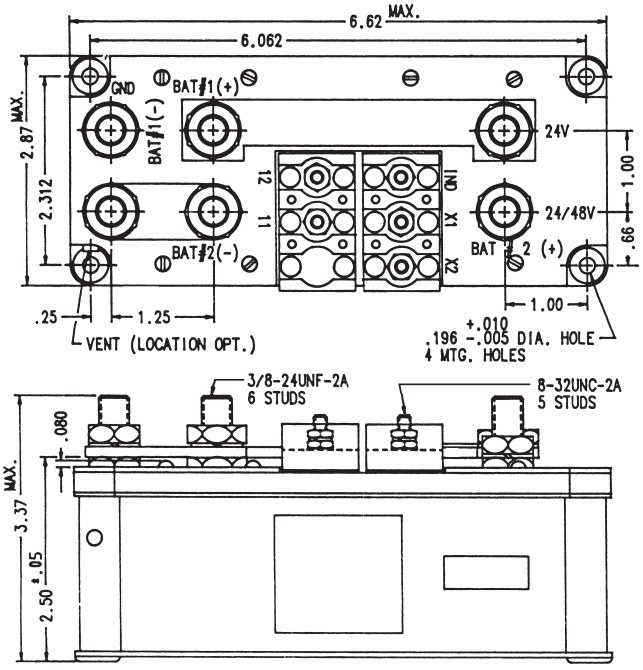

Duty Cycle — Intermittent

Operating Voltage, Max. — 31 Vdc

Operating Voltage, Min. — 18 Vdc

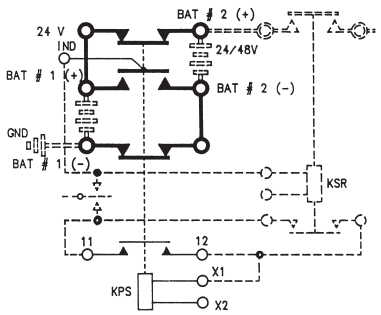

Pickup Voltage @ 25°C, Max., Initial — 12 Vdc

Dropout Voltage — 1.5 to 7 Vdc

Mounting Style A

Circuit Configurations (Consult factory for other available circuit configurations)

Circuit Configuration 1

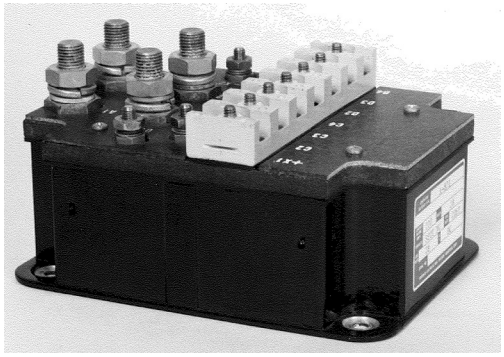

HARTMAN Part Number	Construction Type	Mounting Style	Coil Type	Circuit Config.	TE Part Number
A-848KH	Gasket/Vented	A	Intermittent	1	1616082-2
A-848KH-2	Gasket/Vented	A	Intermittent	1	1616082-4

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

A-848 Series, Rated up to 300 Amps, 28 Vdc

Product Facts

- **DPST NO, Double break and DPDT Double break**
- **Gasket sealed**
- **Auxiliary contacts available**
- **Meets many requirements of MIL-PRF-6106**

Performance Data

Electrical Characteristics

Contact Arrangement — A-848MAS/MLS: DPST NO, Double Break
A-848KLC: DPDT Double Break

Rated Operating Voltage — 28 Vdc

Resistive Rating — 300 Amps, A-848KLC – 200 Amps

General Characteristics

Temperature Range — -55°C to +71°C

Operating Cycles (Life) at Rated Resistive Load, Min. — 50,000 cycles

Operating Cycles (Life) Mechanical, Min. — 100,000 cycles

Dielectric Strength — All Circuits to Ground — 1,250 Vrms
Circuit to Circuit — 1,250 Vrms
Coil to Ground and Aux. Contacts — 1,000 Vrms

Weight — 3.00 lbs

Coil Characteristics

Duty Cycle — Continuous

Operating Voltage, Nom. — 28 Vdc

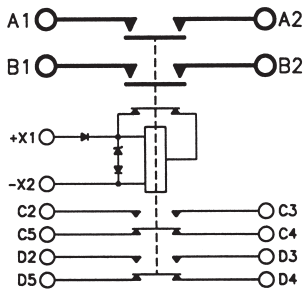

Pickup Voltage, Max. — 18 Vdc

Dropout Voltage — 9 Vdc (12 Vdc Hot)

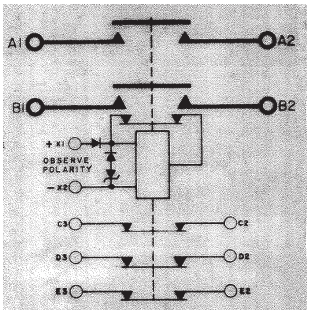

Coil Current, Inrush, Max. — 3.0 Amp

Coil Current, Holding, Max. — 0.35 Amp

AH-965 Series, Rated up to 300 Amps, 30 Vdc

Product Facts

- SPDT NO, SPST NC
- Hermetically sealed
- Auxiliary contacts available
- Meets many requirements of MIL-PRF-6106

Performance Data

Electrical Characteristics

Contact Arrangement — SPDT, Double Break

Rated Operating Voltage — 30 Vdc

Resistive Rating — 300 Amps

Carry Only for 30 sec — 1,000 Amps

Carry Only, Inrush — 1,500 Amps

Rupture Rating — 3,000 Amps

General Characteristics

Temperature Range — -65°C to +120°C

Operating Cycles (Life) at Rated Resistive Load, Min. — 50,000 cycles

Operating Cycles (Life) Mechanical, Min. — 100,000 cycles

Dielectric Strength —
All Circuits to Ground — 1,250 Vrms
Circuit to Circuit — 1,250 Vrms
Coil to Ground and Aux. Contacts — 1,000 Vrms

Altitude, Max. — 50,000 ft.

Weight, Max. — 2.88 lbs

Coil Characteristics

Duty Cycle — Intermittent, 3 minutes max.

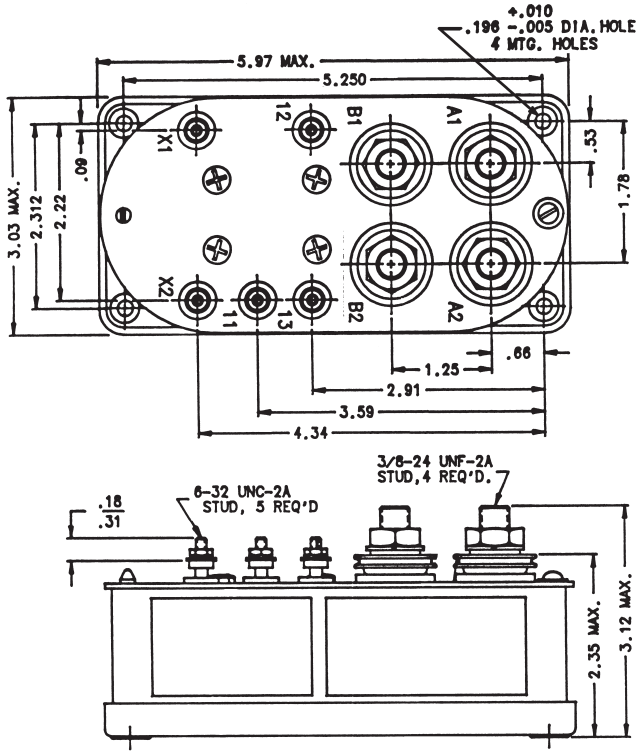

Operating Voltage, Max. — 30 Vdc

Pickup Voltage, Max. Hot — 20 Vdc

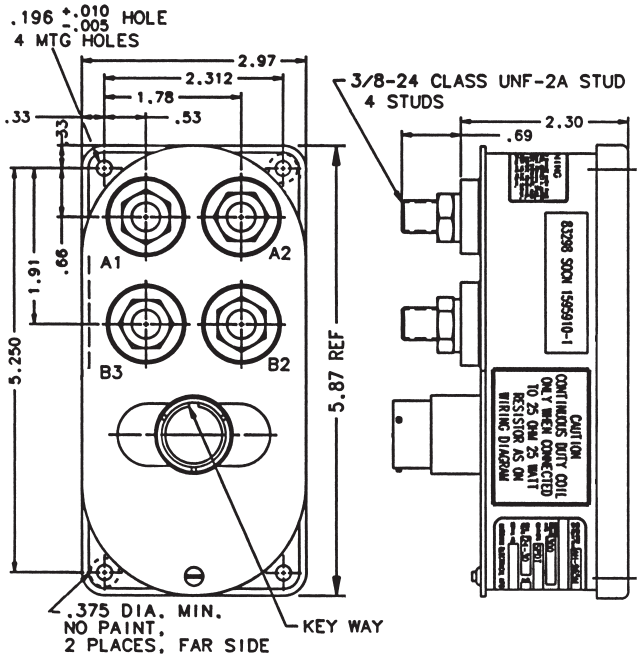

Dropout Voltage — 0.5 to 5 Vdc

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

A-882DL	Gasket/Vented	A	Intermittent	1	1616102-6

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

A-931 Series, Rated up to 600 Amps, 28 Vdc

Product Facts

- SPST NC, Double break
- Gasket sealed
- Auxiliary contacts available
- Meets many requirements of MIL-PRF-6106

Performance Data

Electrical Characteristics

Main Contacts —

Contact Arrangement — SPST NC, Double Break

Rated Operating Voltage — 28 Vdc

Resistive Rating — 600 Amps

Inrush for 30 sec — 1,000 Amps

Inrush for 5 min — 800 Amps

Auxiliary Contacts —

Aux. Contact Arrangement — DPST

Rated Operating Voltage — 28 Vdc

Resistive Rating — 5 Amps

General Characteristics

Temperature Range — -55°C to +71°C

Operating Cycles (Life) at Rated Resistive Load, Min. — 50,000 cycles

Operating Cycles (Life) Mechanical, Min. — 100,000 cycles

Dielectric Strength — All Circuits to Ground — 1,250 Vrms
Circuit to Circuit — 1,250 Vrms
Coil to Ground and Aux. Contacts — 1,000 Vrms

Weight, Max. — 3.00 lbs

Coil Characteristics

Duty Cycle — Continuous, economizing

Operating Voltage, Max. — 30 Vdc

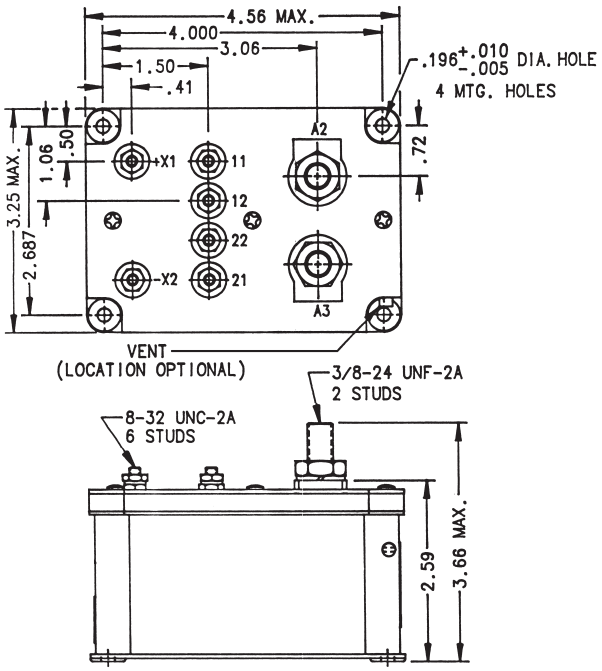

Operating Voltage, Min. — 18 Vdc

Pickup Voltage, Initial, Max. @ 71°C — 10 Vdc

Dropout Voltage — 1 to 7 Vdc

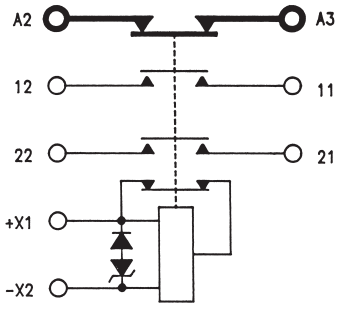

Resistance, Inrush ± 20% @ 25°C — 3 Ohm

Resistance, Hold ± 20% @ 25°C — 80 Ohm

Mounting Style A

A-981 Series, Rated up to 600 Amps, 28/48 Vdc

Product Facts

- SPDT, Double break or 1PST NO, 1PST NC
- Gasket sealed
- Auxiliary contacts available
- Meets many requirements of MIL-PRF-6106

Performance Data

Electrical Characteristics

Contact Arrangement — SPST NC, Double Break or 1PST NO, 1PST NC

Rated Operating Voltage — 28 Vdc

Resistive Rating — 600 Amps

Inrush for 30 sec — 1,000 Amps

Motor Rating — 1,500 Amps, Inrush only

General Characteristics

Temperature Range — -55°C to +71°C

Operating Cycles (Life) at Rated Resistive Load, Min. — 50,000 cycles

Operating Cycles (Life) Mechanical, Min. — 100,000 cycles

Weight, Max. —
A-981E — 4 lbs 5 oz
A-981K — 4.5 lbs

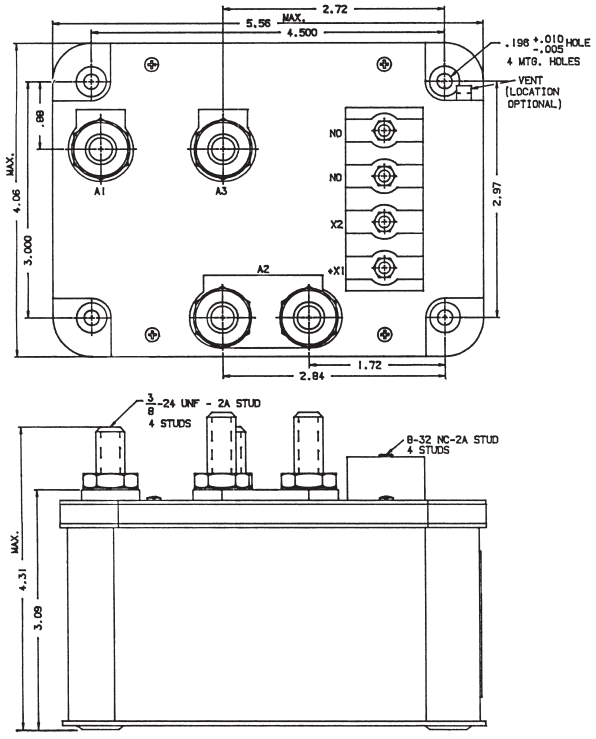

Coil Characteristics

Duty Cycle —
A-981E — Continuous
A-981K — Continuous, economizing

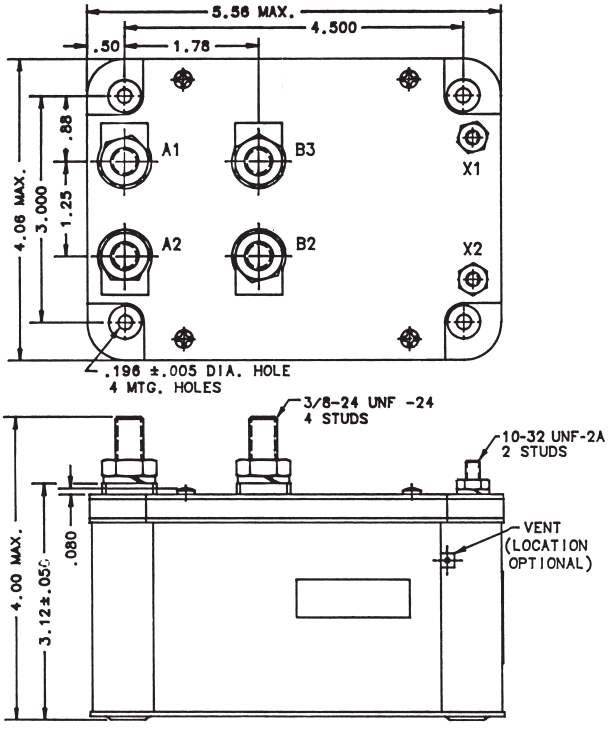

Operating Voltage —
A-981E — 28 Vdc
A-981K — 24 Vdc min. to 30 Vdc max.

Pickup Voltage —
A-981E — 18 Vdc max. hot
A-981K — 16 Vdc max. initial @ 25°C

Dropout Voltage —
A-981E — 10 Vdc max. hot
A-981K — 1 to 10 Vdc

E-328-2 Series AC Low Voltage Warning Relay, 10 Amps, 28 Vdc Contacts

Product Facts

- DPDT
- Gasket sealed

Performance Data

Electrical Characteristics

Relay/Relay Driver

Contact Arrangement — DPDT

Rated Operating Voltage — 28 Vdc

Resistive Rating — 10 Amps

Inductive Rating — 5 Amps

Lamp Rating — 1.5 Amps

Coil Characteristics

Duty Cycle — Continuous

Voltage Sensor

Operating Voltage, Nom. — 115 V, 380-420 Hz

Pickup Voltage — 107 ± 3 Vrms

Dropout Voltage — 100 ± 2 Vrms

Dropout Time, Min. — 40 msec

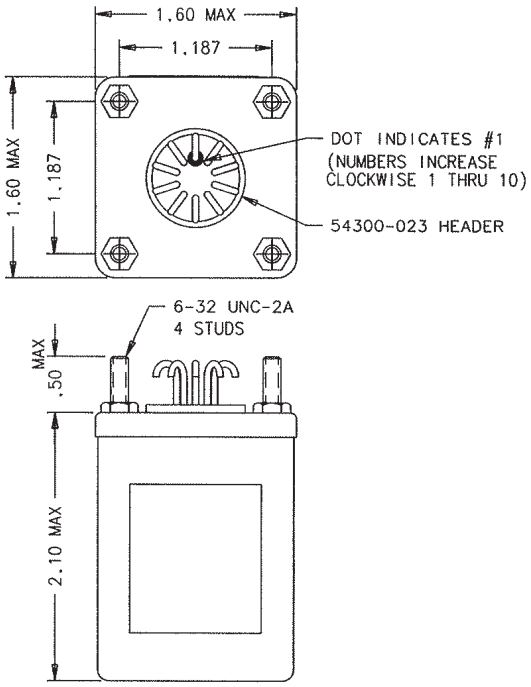

General Characteristics

Temperature Range — -55°C to +85°C

Operating Cycles (Life)

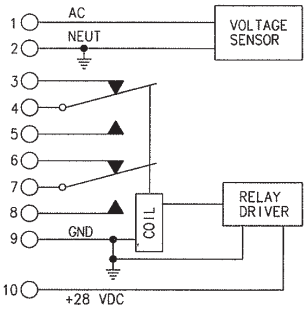

Mechanical, Min. — 100,000 cycles

Weight,Max. – 6 oz.

Mounting Style A

Circuit Configurations (Consult factory for other available circuit configurations)

Circuit Configuration 1

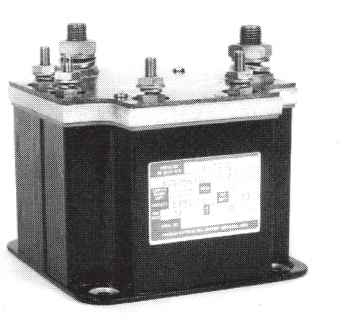

HARTMAN Part Number	Construction Type	Mounting Style	Coil Type	Circuit Config.	TE Part Number
E-328-2	Gasket/Vented	A	Continuous	1	1-1616126-8

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

A-772 Series Battery Contactor — Discharge Overload, Rated up to 200 Amps, 28 Vdc

Product Facts

- **SPST NO**
- **Gasket sealed**
- **Auxiliary contacts available**
- **Limits overload current duration**

Performance Data

Electrical Characteristics

Main Contacts —

Contact Arrangement — SPST NO

Rated Operating Voltage — 28 Vdc

Resistive Rating — 200 Amps

Auxiliary Contacts —

Aux. Contact Arrangement — SPST NC

Rated Operating Voltage — 28 Vdc

Resistive Rating — 5 Amps

General Characteristics

Temperature Range — -55°C to +71°C

Operating Cycles (Life) at Rated Resistive Load — 50,000 cycles

Operating Cycles (Life) Mechanical — 100,000 cycles

Electrical— 50,000 min.

Weight, Max. — 2 lbs. 13 oz.

Coil Characteristics

Duty Cycle — Continuous

Operating Voltage, Max. — 30 V

Operating Voltage, Min. — 24 V

Pickup Voltage @ 25°C, Max. — 16 V

Dropout Voltage — 1 to 7 V

Overload Sensor

Type — Latching

Polarized — Discharge

Trip — 300 Amps ± 10%

Time Delay — 900 to 1,100 msec

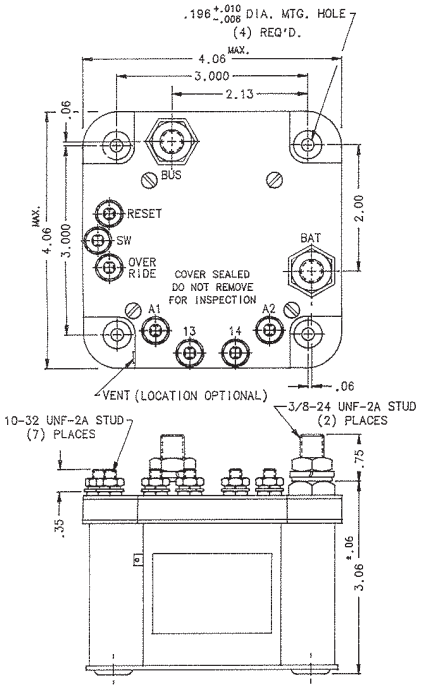

Sensor Contacts, Aux.

Sensor Contact Arrangement — SPST NO

Rated Operating Voltage — 28 Vdc

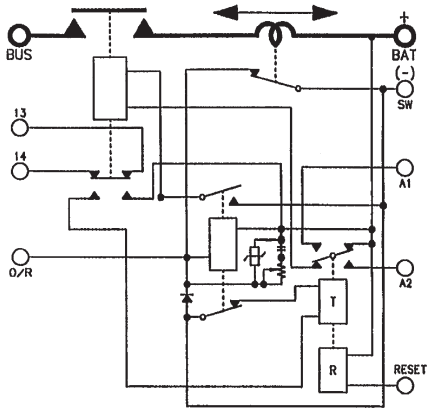

Resistive Rating — 3 Amps

Reset Rating, Max. — 18 V

Mounting Style A

Circuit Configurations (Consult factory for other available circuit configurations)

Circuit Configuration 1

E-387 Series Current Sensor, Rated up to 25 Amps, 28 Vdc

Product Facts

- SPDT
- Gasket sealed
- Meets many requirements of MIL-PRF-6106

Performance Data

Electrical Characteristics

Indicator Contact Arrangement — SPDT

Rated Operating Voltage — 28 Vdc

Resistive Rating — 1 Amp

General Characteristics

Dielectric Strength — 1,000 Vrms, 60 Hz

Insulation Resistance @ 500 Vdc & 20°C & 50% R.H. (Max.)— 1,000 megohm min.

Weight, Max. — 8 oz

Coil Characteristics

Duty Cycle — Continuous

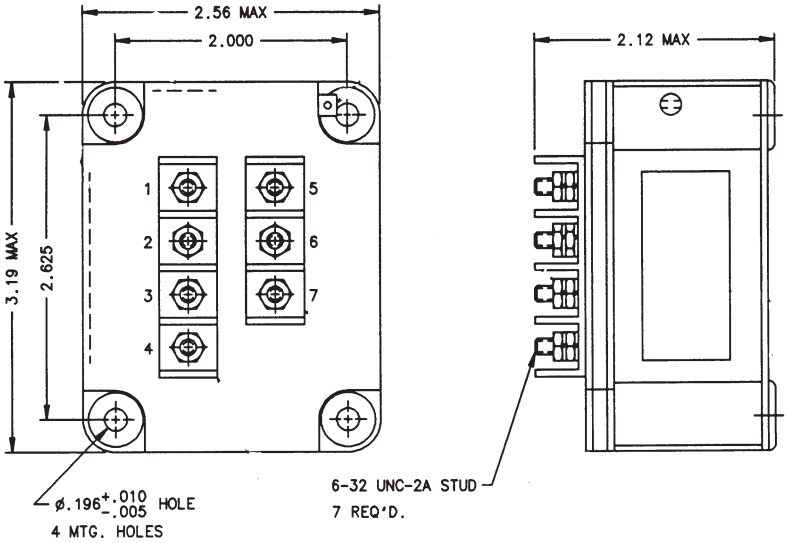

Control Power — 28 Vdc

Sensor Input — 400 Hz ± 100 Hz

Pickup Current — 14 ± 2 Amps

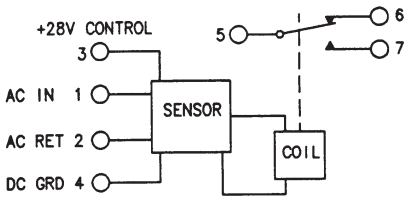

Dropout Current — 7 ± 1 Amp

Continuous Sensor Current — 25 Amp, max.

Mounting Style A

Circuit Configurations (Consult factory for other available circuit configurations)

A-700 Series Cutout — Reverse Current, Rated up to 100 Amps, 28 Vdc

Product Facts

- SPST NO
- Gasket sealed
- Auxiliary contacts available

Performance Data

Electrical Characteristics

Main Contacts —
Contact Arrangement — SPST NO
Rated Operating Voltage — 28 Vdc
Resistive Rating — 100 Amps
Resistive Rating at 1 min. — 200 Amps
Interrupting Capacity — 4,500 Amps

Reverse Current Setting* — 2 to 6 Amps
Differential Voltage for Pickup — .85 ± .15 V
Auxiliary Contacts —
Aux. Contact Arrangement — SPST NC, SPST NO
Resistive Rating — 5 Amps
Inductive Rating — 2 Amps
Lamp Rating — 1 Amps

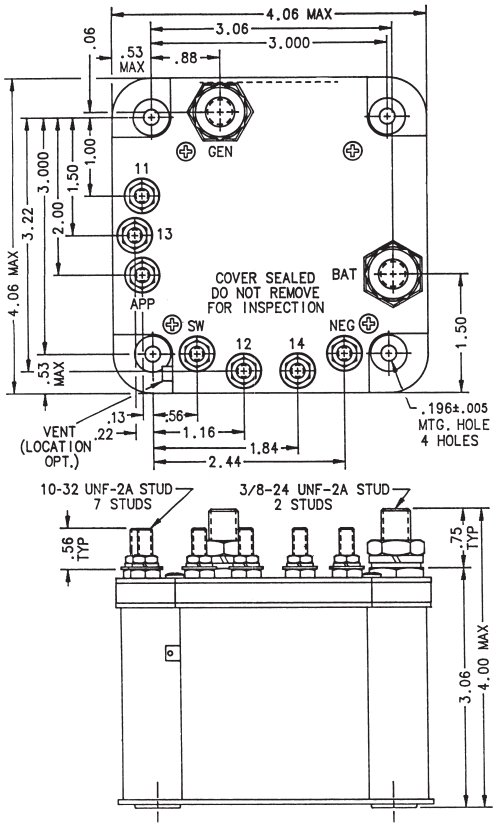

General Characteristics

Weight, Max. — 3 lbs 1 oz

Coil Characteristics

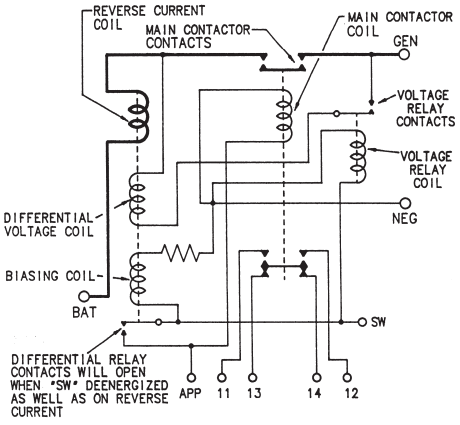

Duty Cycle — Continuous

*Over a Voltage Range of 27.5 ± 2.5 Vdc

Mounting Style A

Circuit Configurations (Consult factory for other available circuit configurations)

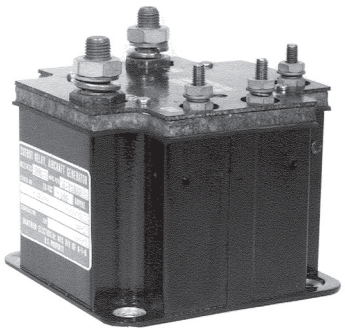

Circuit Configuration 1

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

A-700 Series Cutout — Reverse Current, Rated up to 200 Amps, 28 Vdc

Product Facts

- SPST NO
- Gasket sealed
- Meets many requirements of MIL-PRF-6106

Performance Data

Electrical Characteristics

Contact Arrangement — SPST NO

Rated Operating Voltage — 28 Vdc

Current Rating, Continuous — 200 Amps

Current Rating at 15 sec. — 1,000 Amps

Current Rating at 1 min. — 500 Amps

Current Rating at 5 min. — 300 Amps

Interrupting Capacity — 4,500 Amps

Reverse Current Setting* — 6 to 17 Amps

Differential Voltage for Pickup — .85 ± .15 V

General Characteristics

Temperature Range — -55°C to +71°C

Operating Cycles (Life) at Rated Resistive Load, Min. — 50,000 cycles

Operating Cycles (Life) Mechanical, Min. — 100,000 cycles

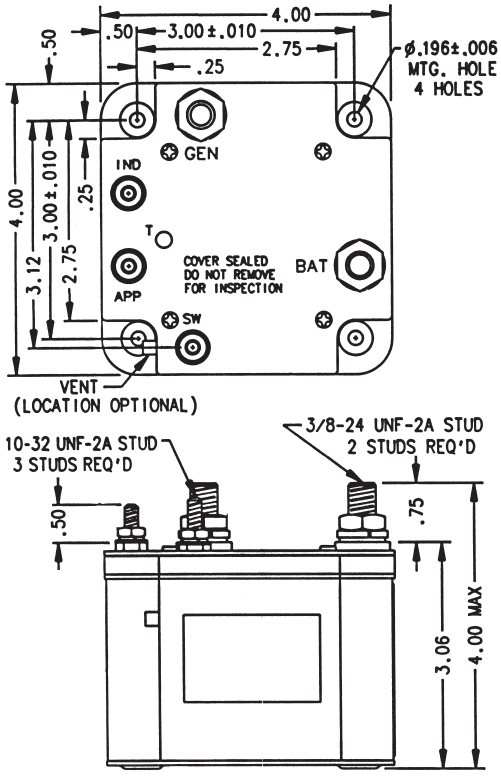

Electrical— 50,000 min.

Weight, Max. — 2 lbs 15 oz

Coil Characteristics

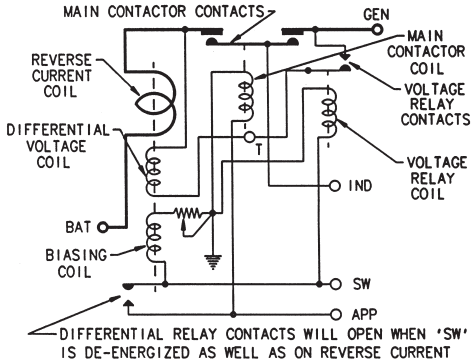

Duty Cycle — Continuous

*Over a Voltage Range of 27.5 ± 2.5 Vdc and Calibrated at 12 ± 1 Amp RC at 28 Vdc & 25°C ± 5°C

Mounting Style A

Circuit Configurations (Consult factory for other available circuit configurations)

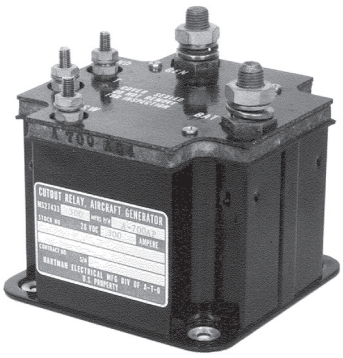

Circuit Configuration 1

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

A-700 Series Cutout — Reverse Current, Rated up to 300 Amps, 28 Vdc

Product Facts

- SPST NO, Double break
- Gasket sealed
- Meets many requirements of MIL-PRF-6106

Performance Data

Electrical Characteristics

Contact Arrangement — SPST NO, Double Break

Rated Operating Voltage — 28 Vdc

Resistive Rating — 300 Amps

Reverse Current Dropout — 9 to 25 Amps

Differential Pickup — .5 ± .15

General Characteristics

Temperature Range — -55°C to +71°C

Operating Cycles (Life) at Rated Resistive Load, Min. — 50,000 cycles

Operating Cycles (Life) Mechanical, Min. — 100,000 cycles

Electrical —50,000 min.

Dielectric Strength — All Circuits to Ground — 1,250 Vrms
Circuit to Circuit — 1,250 Vrms
Coil to Ground and Aux. Contacts — 500 Vrms

Weight, Max. —
A-700AAP — 2.9 lbs
A-700ZC-7, A-700ZG — 2.5 lbs

Coil Characteristics

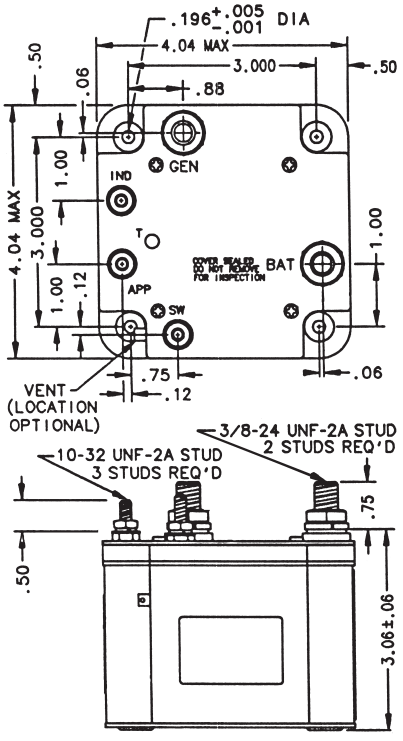

Duty Cycle — Continuous

Duty Cycle when using "APP" — Intermittent

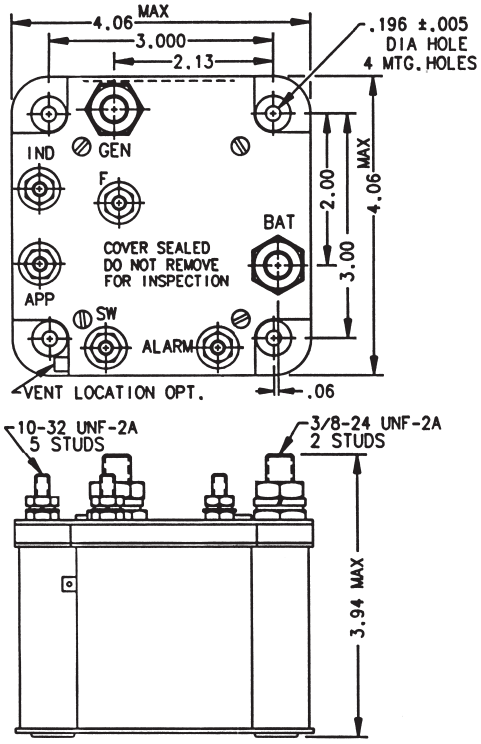

Nom. Coil Voltage — 24 to 30 Vdc

Pickup Voltage, Max. — 18 Vdc

Dropout Voltage — 0.5 to 7.0 Vdc

Mounting Style A

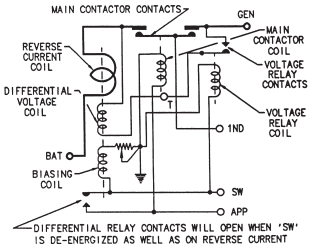

Mounting Style B

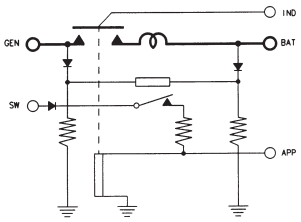

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

A-700 Series Cutout — Reverse Current, Rated up to 300 Amps, 28 Vdc (Continued)

A-701 Series Cutout — Reverse Current, Rated up to 400 Amps, 28 Vdc

Product Facts

- SPST NO, Double break
- Gasket sealed
- Meets many requirements of MIL-C-5026 and MIL-PRF-6106

Performance Data

Electrical Characteristics

Contact Arrangement — SPST NO, Double Break

Rated Operating Voltage — 28 Vdc

Resistive Rating — 400 Amps

Resistive for 30 sec. — 1,000 Amps

Inrush Rating — 1,500 Amps

Reverse Current Dropout —
A-701D — 25 to 50 Amps
A-701C — 18 to 35 Amps

General Characteristics

Temperature Range —
-55°C to +71°C

Operating Cycles (Life) at Rated Resistive Load, Min. — 50,000 cycles

Operating Cycles (Life) Mechanical, Min. — 100,000 cycles

Electrical — 50,000 min.

Dielectric Strength —
All Circuits to Ground — 1,250 Vrms
Circuit to Circuit — 1,250 Vrms
Coil to Ground and Aux. Contacts — 500 Vrms

Differential Pickup — 0.5 ± .15 Vdc

Weight, Max. —
A-701D — 3 lbs 10 oz
A-701C — 4 lbs

Coil Characteristics

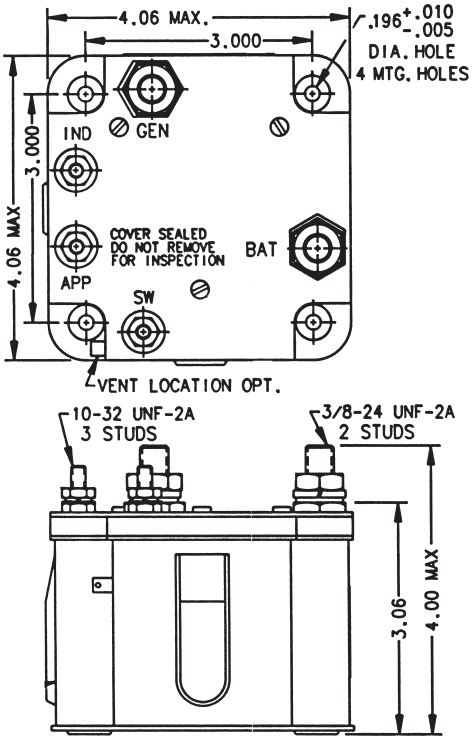

Duty Cycle — Continuous, economizing

Duty Cycle when using "APP"on A-701D or "GMG" on A-701C — Intermittent

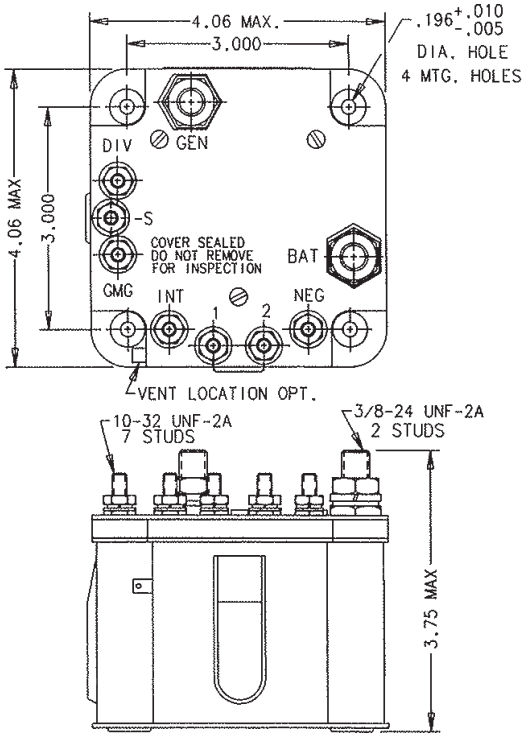

Nom. Coil Voltage — 24 to 30 Vdc

Pickup Voltage, Max. —
A-701D — 15 Vdc
A-701C — 12 Vdc

Dropout Voltage — 0.5 to 7.0 Vdc

Mounting Style A

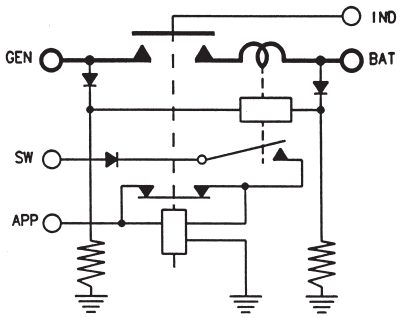

Mounting Style B

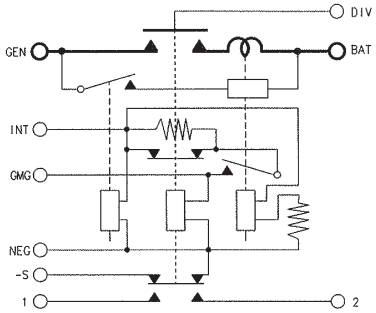

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

A-701 Series Cutout — Reverse Current, Rated up to 400 Amps, 28 Vdc (Continued)

Circuit Configurations (Consult factory for other available circuit configurations)

A-702 Series Cutout — Reverse Current, Rated up to 600 Amps, 28 Vdc

Product Facts

- **SPST NO**
- **Gasket sealed**

Performance Data

Electrical Characteristics

Contact Arrangement — SPST NO, Double Break

Rated Operating Voltage — 28 Vdc

Resistive Rating — 600 Amps

Reverse Current Dropout — 18 to 35 Amps

Differential Pickup — .5 ± .15

General Characteristics

Temperature Range — -55°C to +71°C

Operating Cycles (Life) at Rated Resistive Load, Min. — 50,000 cycles

Operating Cycles (Life) Mechanical, Min. — 100,000 cycles

Electrical —50,000 min.

Dielectric Strength — All Circuits to Ground — 1,250 Vrms
Circuit to Circuit — 1,250 Vrms
Coil to Ground and Aux. Contacts — 500 Vrms

Weight, Max. — 3.9 lbs.

Coil Characteristics

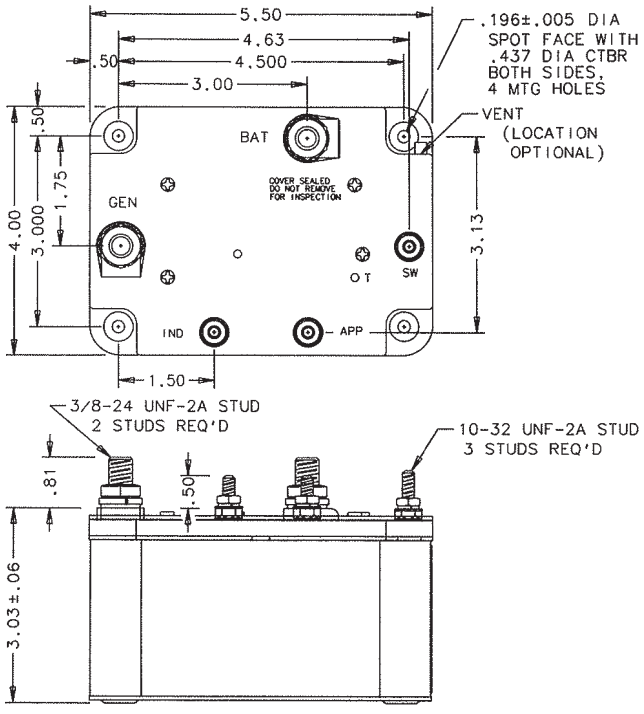

Duty Cycle — Continuous

Duty Cycle when using "APP" — Continuous

Nom. Coil Voltage — 24 to 30 Vdc

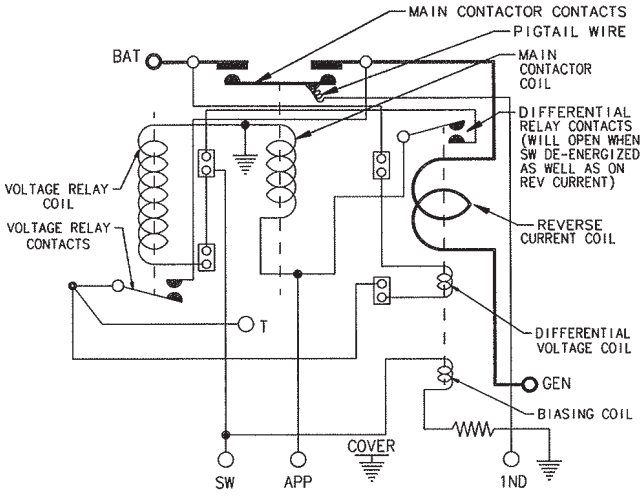

Pickup Voltage, Max. — 18 Vdc

Dropout Voltage — 0.5 to 7.0 Vdc

Mounting Style A

Circuit Configurations (Consult factory for other available circuit configurations)

Circuit Configuration 1

HARTMAN Part Number	Construction Type	Mounting Style	Coil Type	Circuit Config.	TE Part Number
A-702AAP	Gasket/Vented	A	Continuous	1	1-1616109-3

B-188 Series External Power Monitor, 115 VAC, 400 Hz

Product Facts

- SPST
- Gasket Sealed
- Over/under frequency protection
- Over/under voltage protection
- Dust tight

Performance Data

Electrical Characteristics

Contact Arrangement — SPST

Rated Operating Voltage — 115 VAC/28 Vdc, 3 phase, 400 Hz

Resistive Rating — 3 Amps

General Characteristics

Operating Temperature Range — -54°C to +71°C

Dielectric Strength — Leakage current will not exceed .001 Amps when unit is subjected to test of Para. 4.6.2 of MIL-E-24021A

Altitude — 0-40,000 ft

Weight, Max. — .75 lb

Sinusoidal Vibration — 5-15.5 CPS ±0.13 G, 15.5-54 CPS 0.01 inch DA, 54-500 CPS ± 1.5 G

Shock, Max. — 10 G 30 ± 1 ms

Operation — Contacts will remain as shown (off condition) until input power is anywhere within the "on" zone. Contacts will revert to off condition whenever input voltage and/or frequency is above the high side or below the low side "off". Limits for time intervals exceeding the transient period.

Limits —

"On" zone —

"On" zone voltage limits 100 to 120 volts rms all phases

"On" zone frequency limits 380 to 420 CPS

"Off" limits —

High side voltage "off" limits — 131 ± 5 volts 3 Ø (highest of 3Ø)

High side frequency "off" limits — 425 ± 5 CPS

Low side frequency "off" limits — 375 ± 5 CPS

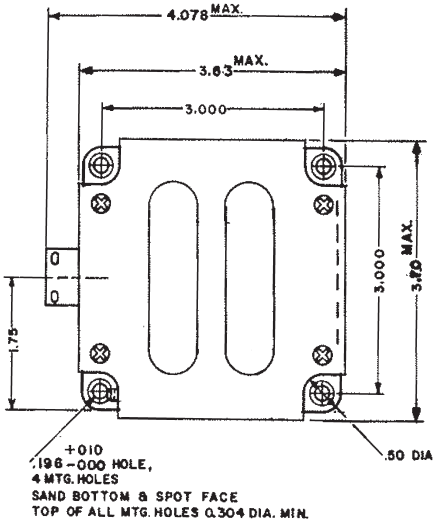

Voltage Transient Limits —

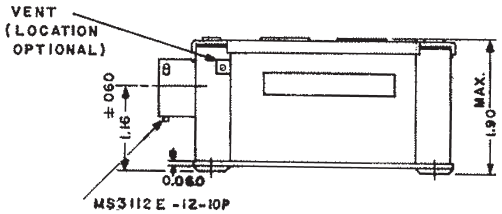

High Side — above limit 2 but below limit 1 of Fig. 2 MIL-STD-704, 3Ø (highest of 3Ø)

Low Side — below limit 3 Fig. 2 MIL-STD-704

Over and Under frequency time delay 3 ± 1 sec.

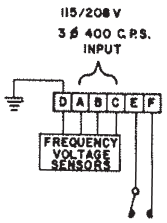

Output rating SPST 3 AMP Ind. 28 V DC/115 V 400 CPS

Mounting Style A

Circuit Configurations (Consult factory for other available circuit configurations)

A-711 Series Relay, Automatic Dropout, Rated up to 600 Amps, 29 Vdc

Product Facts

- SPST NO, Double break
- Gasket sealed
- Auxiliary contacts available
- Meets many requirements of MIL-PRF-6106

Performance Data

Electrical Characteristics

Contact Arrangement — SPST NO, Double Break

Operating Voltage, Max. — 29 Vdc

Resistive Rating — 600 Amps

Pickup Voltage, Max. — 17 Vdc

Dropout Voltage, Max. — 14 Vdc, except for A-711 which is 1 to 5 Vdc

Pickup Current, Max. — 490 Amps

Dropout Current at any Contactor Voltage — 150 ± 15 Amps, except for A-711R which is S1 — 135 ± 15 Amps and S2 — 235 ± 20 Amps

General Characteristics

Temperature Range — -55°C to +71°C

Operating Cycles (Life) at Rated Resistive Load, Min. — 25,000 cycles

Operating Period, Max. — 3 min.

Weight, Max. — A-711JF, A-711JF — 3 lbs 13 oz
A-711Z — 3 lbs 6 oz
A-711R — 3 lbs 5 oz

Coil Characteristics

Duty Cycle — Intermittent

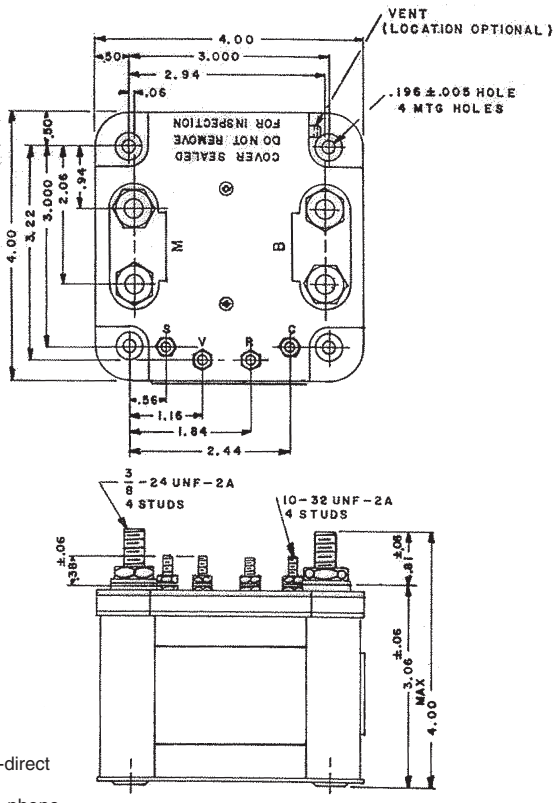

Coil Current, Max. — A-711AJ, A-711JM — 2 Amps
A-711Z — 0.6 Amp
A-711R — 1.0 Amp

Coil Voltage, Nom. — 28 Vdc

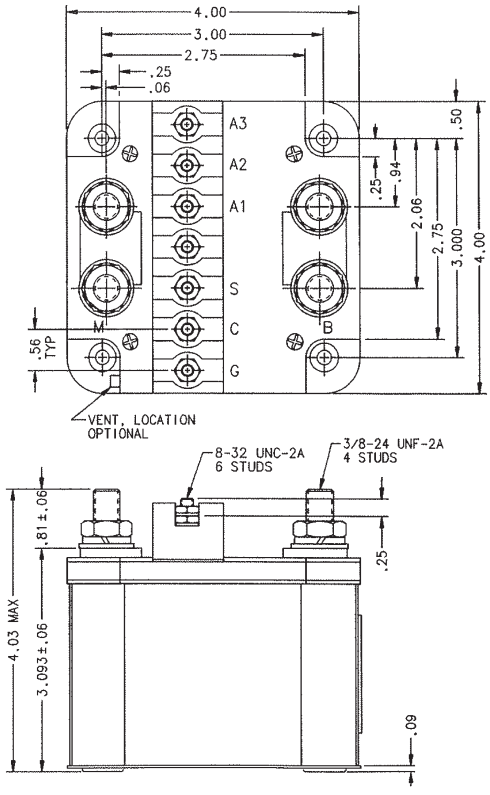

Signal Resistor — 20 Ohm ± 10%, 20 W

Coil Res., "C" Term. to "GND" — 36 Ohm ± 10%

Operating Voltage, Nom. — 28 Vdc

Resistive Rating — 10 Amps

Inductive Rating — 6 Amps

Motor Rating — 3 Amps

Lamp Rating — 1 Amps

Pickup Time, Max. — 125 msec

Contact Bounce, Max. — 3 msec

Operating Voltage, Max. — 36 Vdc

Operating Voltage, Nom. — 28 Vdc

Pickup Voltage — 24.5 ± 0.5 Vdc

Dropout Voltage — 21.5 ± 0.5 Vdc

Dropout Time Delay — 200-400 milliseconds when the relay is in the energized position and the voltage drops below 21.5 ± 0.5 Vdc and above 15 Vdc. The relay will remain energized for 200 to 400 milliseconds before de-energizing when the voltage drops below 15 Vdc. Time delay is 30 Ms max.

Operating Current, Max. @ 25°C — 150 milliamp

General Characteristics

Ambient Temperature Range — -55°C to +85°C

Operating Cycles (Life) at Rated Resistive Load, Min. — 100,000 cycles

Dielectric Withstanding Voltage — 1,000 Vrms, 60 Hz, 1 mil/Amp max. leakage

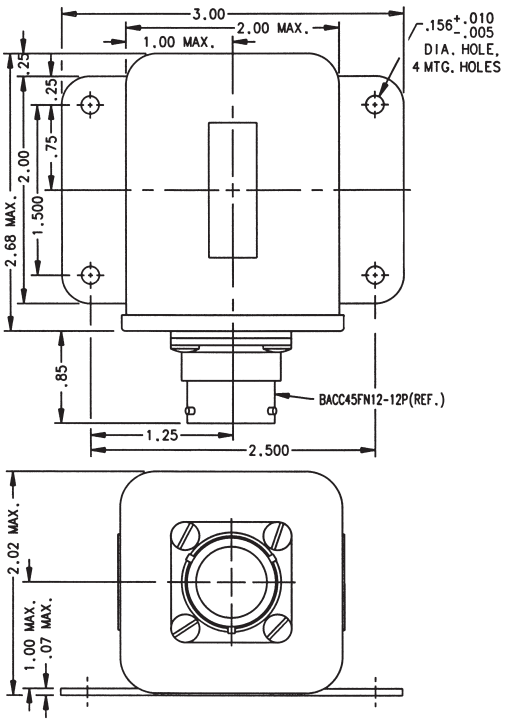

Insulation Resistance @ 500 Vdc — 100 megohm min.

Altitude — 80,000 ft

Weight, Max. — .25 lbs

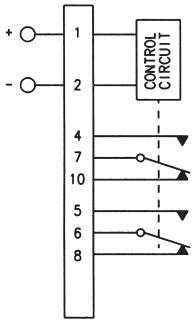

Sinusoidal Vibration — .060 DA @ 5 to 80 Hz
20 G ™ 80 to 2000 Hz

Shock for 11 msec, 1/2 Sine, 3 Axes — 30 G

Mounting Style A

E-329 Series Relay, Voltage Sensing

Product Facts

- 3PDT
- Solder sealed cover, hermetically sealed contacts
- Meets many requirements of MIL-PRF-6106

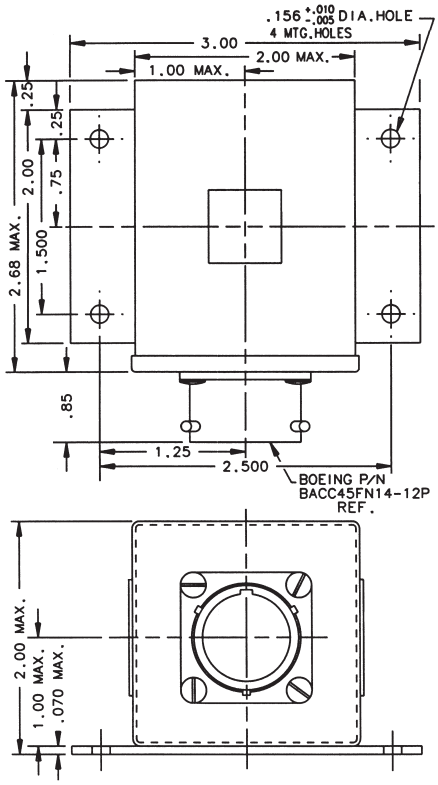

Performance Data

Electrical Characteristics

Contact Arrangement — 3PDT
Rated Operating Voltage — 28 Vdc, and 155 Vac 400 Hz
Resistive Rating — 10 Amps
Inductive Rating — 8 Amps
Motor Rating — 4 Amps
Lamp Rating — 2 Amps
Pickup Time, Max. — 70 msec
Contact Bounce, Max. — 3 msec
Dropout Time Delay — 200-400 msec when the relay is in the energized position and the voltage drops below 104 ± 2 Vrms and above 88 ±4 Vrms. The relay will remain energized for 200-400 msec before deenergizing. When the voltage drops below 88 ±4 Vrms no time delay is required. When the voltage drops to 30 volts or less the relay will de-energize 50 msec max.
Operating Voltage, Nom. — 115 VAC, RMS L-N
Operating Voltage, Max. — 122 VAC, RMS L-N
Operating Frequency — 400 ±20 Hz
Pickup Voltage — 109 ±2 Vrms
Dropout Voltage — 104 ±2 Vrms
Operating Current, Max. @ 25°C — 100 milliamp

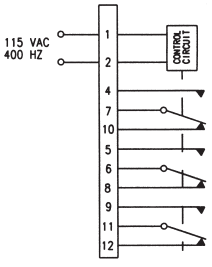

General Characteristics

Temperature Range — -55°C to +85°C
Operating Cycles (Life) at Rated Resistive Load, Min. — 100,000 cycles
Operating Cycles (Life) Mechanical, Min. — 100,000 cycles
Dielectric Withstanding Voltage — 1,000 Vrms, 60 Hz
Insulation Resistance @ 500 Vdc — 1,000 megohm min.
Altitude — 0-80,000 ft
Weight, Max. — 10 oz
Shock for 11 msec, 1/2 Sine, 3 Axis — 30 G

E-308TA Series, Undervoltage Sensor, Rated up to 10 Amps, 28 Vdc

Product Facts

- **DPDT**
- **Gasket sealed**
- **Meets many requirements of MIL-PRF-6106**

Performance Data

Electrical Characteristics

Contact Arrangement — DPDT

Operating Voltage, Nom. — 28 Vdc

Resistive Rating — 10 Amps

Inductive Rating — 2 Amps

General Characteristics

Operating Ambient Temperature Range — -55°F to +165°F

Altitude — 50,000 ft

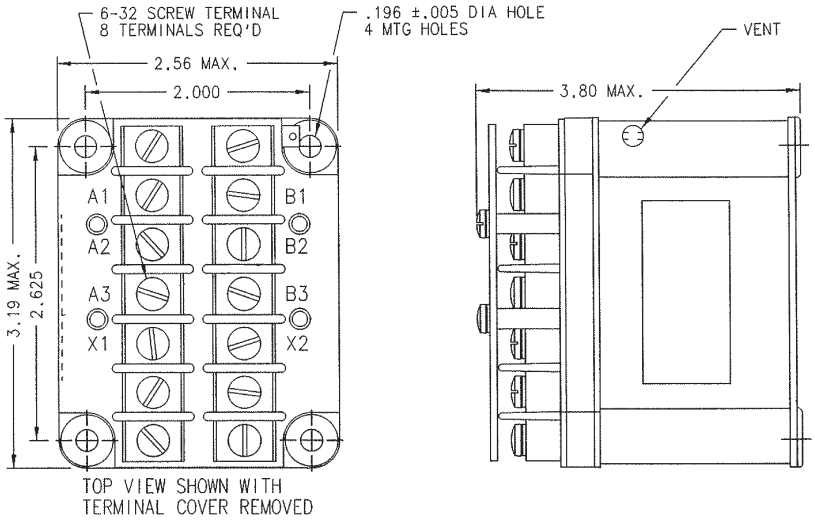

Weight, Max. — 15.5 oz

Coil Characteristics

Duty Cycle — Continuous

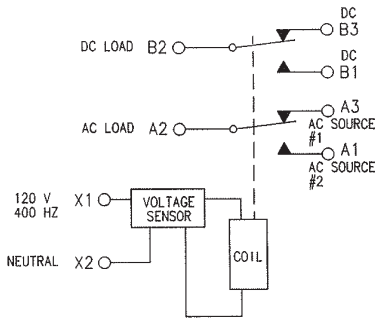

Input to Sensor, Nom. — 120 V, 400 Hz

Operating Characteristic — Contacts A1-A2, B1-B2 will close if the AC input voltage is above 106 ± 2 VAC Contacts A1-A2, B1-B2 will open if the AC input voltage falls below 106 ± 2 VAC.

KILOVAC MAP101 Series Contactor with 1 Form A (SPST-NO) Contacts Rated up to 100 Amps, 12-900 Vdc Dual Contact Material (Cu/Mo)

Product Facts

- **Dual contact material (copper/moly) designed for high current make and interrupt military aerospace, ground vehicle and naval applications**
- **Hermetically sealed, intrinsically safe, operates in explosive/harsh environments with no oxidation or contamination of coils or contacts, during long periods of non-operation**
- **Comes standard with 1 SPST-NO Aux. contact**
- **Not position sensitive, can be mounted in any orientation**
- **RoHS versions available**

Physical Data

Contact Arrangement — Main Contacts — SPST-Latching (form X) 1X Auxiliary Contact — SPST-NO (form A)

Dimensions — See drawing

Weight, Nominal — 0.35 Kg (12.35 oz)

Environmental Data

Shock, 11ms 1/2 Sine (Operating) — 20 G_{peak}

Sine Vibration, 20 G_{peak} — 55-2000 Hz

Random Vibration, 14.06 Grms — 15 Hz (.002 G^2/Hz), 100 Hz (.002 G^2/Hz), 450 Hz (.12 G^2/Hz), 900 Hz (.12 G^2/Hz), 2000 Hz (.083 G^2/Hz)

Operating Temperature Range — -55°C to +85°C

Electrical Data

Voltage Rating — Main Contacts (max) — 400 Vdc Auxiliary Contacts — 30 Vdc

Current Rating, Continuous — Main Contacts [1] — 100 A Auxiliary Contacts — 3 A

Contact Resistance — Main Contacts — 100 mΩ max @ 1 amp 0.75 mΩ max @ rated current Auxiliary Contacts — 200 mΩ max

Electric Life at Rated Current 270 Vdc, Resistive Load — 25,000 cycles

Mechanical Life — 1 million cycles

Dielectric Withstand Voltage — Terminal to Terminal/ Terminals to Coil — 1mA max @ 1,300Vrms

Insulation Resistance — Terminal to Terminal/ Terminals to Coil —

100MΩ min @ 500Vdc new
50MΩ min @ 500Vdc end of life

Note:
[1] Continuous current rating is affected by conductors attached. Keep terminals below 150°C max continuous.

Coil Data

Coil Voltage, Nominal/ Max — 28/ 32 Vdc

Coil Resistance @ 25°C — Contacts Close Coil — 18 Ω Contacts Open Coil — 13 Ω

Pick Up/ Drop Out (Max) — 16 Vdc (-55°C to +25°C) 18 Vdc (+25°C to +85°C)

Coil Current (Max) @ 32Vdc/ -40°C — 4.0 A

Coil Current On Time (Minimum Required to Latch) — 40 ms

Main Contacts — Operate Time (Max) — 40 ms Operate Bounce (Max) — 5 ms Release Time — 25 ms

Auxiliary Contacts Operate/ Release — Within ± 5 ms of main

Ordering Information

Typical Part Number ▶ **MAP101 R B A F E**

Series:
MAP101 = 100 Amp, 12-900VDC Contactor
Dual Contact Material

Contact Form:
R - Latch with 1 SPST NO Aux.

Coil Voltage:
B = 28 Vdc Coil

Lead Length:
A = 15.3 in. (300 mm)

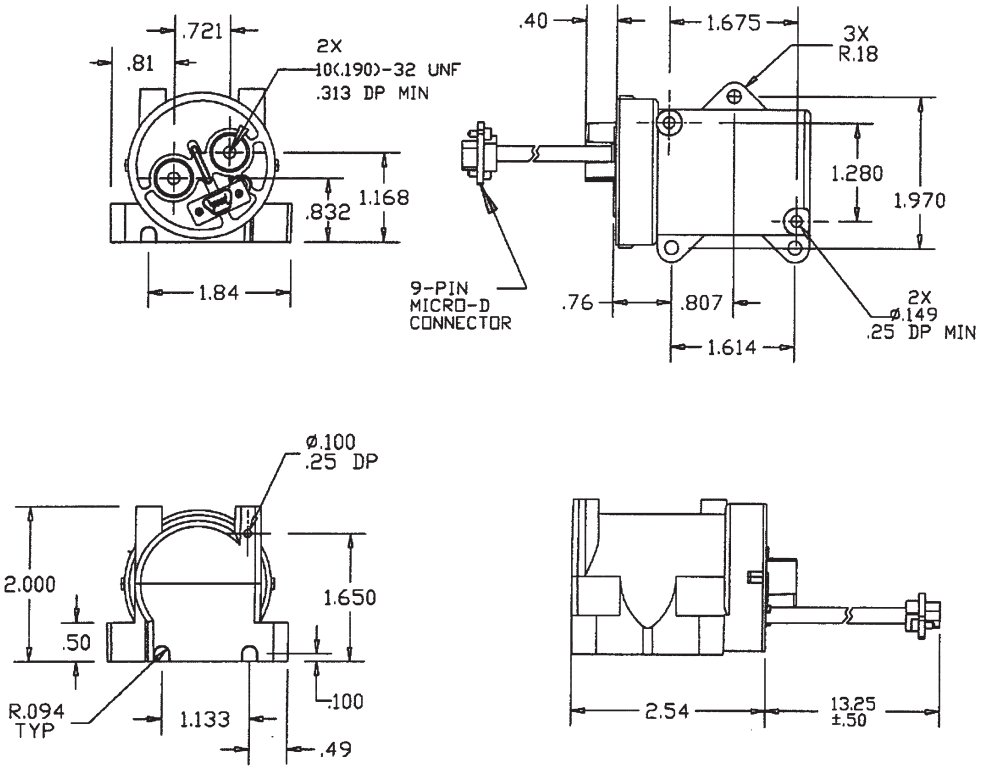

Coil Terminal Connector:
N = None
F = Plug on Flying Lead, 9 Pin Micro-D

Mounting & Power Terminals
E = side mount with 2x#8 10-32 Female Power Terminals

KILOVAC MAP200 Series Contactor with 1 Form A (SPST-NO) Contacts Rated up to 500 Amps, 12-900 Vdc

Product Facts

- **Designed to be the smallest, lightest weight, lowest cost sealed contactor in the industry with its current rating for military aerospace, ground vehicle and naval, high current applications**
- **Built-in coil economizer (models requiring external economizer also available)**
- **Optional auxiliary contact for easy monitoring of power contact position**
- **Hermetically sealed — intrinsically safe, operates in explosive/ harsh environments with no oxidation or contamination of coil or contacts, including long periods of non-operation**
- **Versatile coil and power connections**
- **RoHS versions available**

Performance Data

Contact Arrangement, Power Contacts — 1 Form A (SPST-NO)

Rated Operating Voltage — 12 - 900 VDC

Continuous (Carry) Current, Typical — 500 A @ 85°C, 400 mcm conductors

Consult Factory for required conductors for higher currents

Make/Break Current at Various Voltages [1] — See graph next page

Break Current at 320VDC [1] — 2,000 A, 1 cycle

Contact Resistance, Typ. (@200A) — 0.2 mohms

Load Life — See graph next page

Mechanical Life — 1 million cycles

Contact Arrangement, Auxiliary Contacts — 1 Form A (SPST-NO)

Aux. Contact Current, Max. — 2A @ 30VDC / 3A @ 125VAC

Aux. Contact Current, Min. — 100mA @ 8V

Aux. Contact Resistance, Max. — 0.417 ohms @ 30VDC / .150 ohms @ 125VAC

Dielectric Withstanding Voltage — 2,200 Vrms @ sea level

Insulation Resistance @ 500VDC — 100 megohms [2]

Shock, 11ms 1/2 Sine, Peak, Operating — 20 G

Vibration, Sine, 50-2000Hz., Peak — 20 G

Operating Temperature — -55°C to +85°C

Weight, Nominal — .95 lb. (.43 kg)

Notes:
[1] Main power contacts
[2] 50 at end of life

Coil Operating Voltage (Valid Over Temperature Range)	
Voltage (Will Operate)	18-32VDC
Voltage (Max.)	32VDC
Pickup (Close) Voltage Max.	18VDC
Hold Voltage (Min.)	10VDC
Dropout (Open) Voltage (Min.)	2VDC
Inrush Current (Max.)	4.5A
Holding Current (Avg.)	0.5A
Inrush Time (Max.)	100ms

Ordering Information

Typical Part Number ▶ **MAP200 A R D E A**

Series:
MAP200 = 500 Amp, 12-900VDC Contactor

Contact Form:
A = Normally Open
H = Normally Open with Aux. Contacts

Coil Voltage:
R = 28 Vdc, Mechanical Economizer
S = 28 Vdc, Electrical Cut-throat Economizer

Coil Wire Length:
A = 15.3 in (390 mm)
D = Coil connector on relay (requires option “E” or “X” in next step).

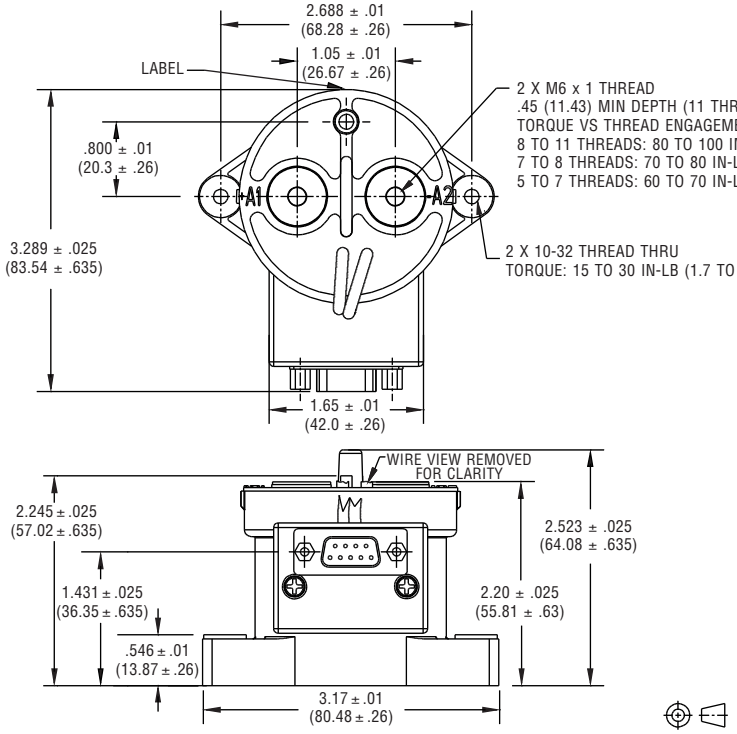

Coil Terminal Connector:
N = No connector
E = 9-pin subminiature “D” plug mounted on contactor housing
X = Special configuration (consult factory)

Mounting & Power Terminals:

KILOVAC CAP202 Series Aerospace Commercial Contactor with 2 Form X (DPST-NO), Contacts Rated up to 300 Amps, 12-600 Vdc

Product Facts

- **Hermetically sealed**
- **Up to 4X SPDT auxiliary switch outputs: 30 Vdc/2A max switching or 6V/5mA min. signal**
- **Integrated coil economizer with coil suppression**
- **EMC compliant - no radiated coil emission**
- **Bidirectional switching - main contacts not polarity sensitive**
- **Mount in any orientation -not position sensitive**

Description

2-pole single throw hermetically sealed DC contactor; 12-900 Vdc/350A per pole

Not position sensitive

Bi-directional switching

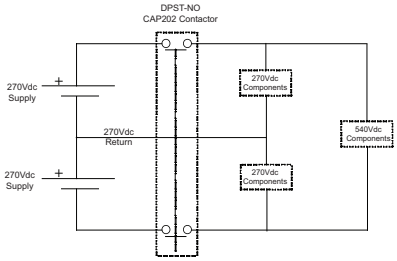

Applications

High Voltage DC Converter Systems (ref schematic below)

Test Equipment

Power Distribution

Power Motion Control

Electrical

Compact epoxy-sealed resin enclosure occupies only about 4 in³ (65.5 cm³)

Contact arrangement: DPST-No (2 form X)

Voltage rating: 12-900 Vdc (main contacts); 30 Vdc (auxiliary)

Mechanical life: 100,000 cycles

Physical or Other Properties

Weight: 0.79 Kg

Hermetically sealed

Safe for harsh/corrosive environments

No contacts oxidation over periods on non-use

Number of SPDT Auxiliary Contacts per Contactor Type:
CAP202AS — None
CAP202MS — Two
CAP202FS — Four

0.3 mΩ max. @ 200A after 3 mins.
Auxiliary Catacts — 200 mΩ max

Hot Switching Performance @ ± 400 Vdc (3) —
100A make/break — 10,000 cycles
250A make/break — 2,500 cycles
700A break only — 10 cycles

Hot Switching Performance @ ± 270 Vdc (4) —
100A make/break — 40,000 cycles
250A make/break — 7,500 cycles
2000A break only @ ±370Vdc (5) — 2 cycles

Maximum Make Current — 700A

Dielectric Withstand Voltage over Life — Terminal to Terminal/Terminals to Coil — 1mA max @ 2,200Vrms

Insulation Resistance over Life — Terminal to Terminal/Terminals to Coil — 50mΩ min @ 500Vdc

Mechanical Life — 100,000 cycles

Environmental Data

Shock, 11ms 1/2 sine (operating) — 20G peak

Sine Vibration, 10G peak — 55-2,000 Hz.

Random Vibration, 14 Grms —

15	100	300	900	2000 Hz
.01	.01	.2	.2	.01 G2/Hz

Operating Temperature Range — -55°C to +85°C

Notes:

[1] Using 4/0 conductor. Current rating is affected by attached conductor size and design. Keep terminals below 150˚C max. continuous, 175˚C for 2 hours max. and 200˚C for 1 minute max. For mounting large conductors, request terminal adapter PN 3-1618396-7.

[2] Operational contact resistance is measured by millivolt drop across contacts a > 100A current. Initial contact resistance may be higher than 0.3mΩ, but will drop below within 30 mins. max.

[3] Voltage applied to each contact set separately.

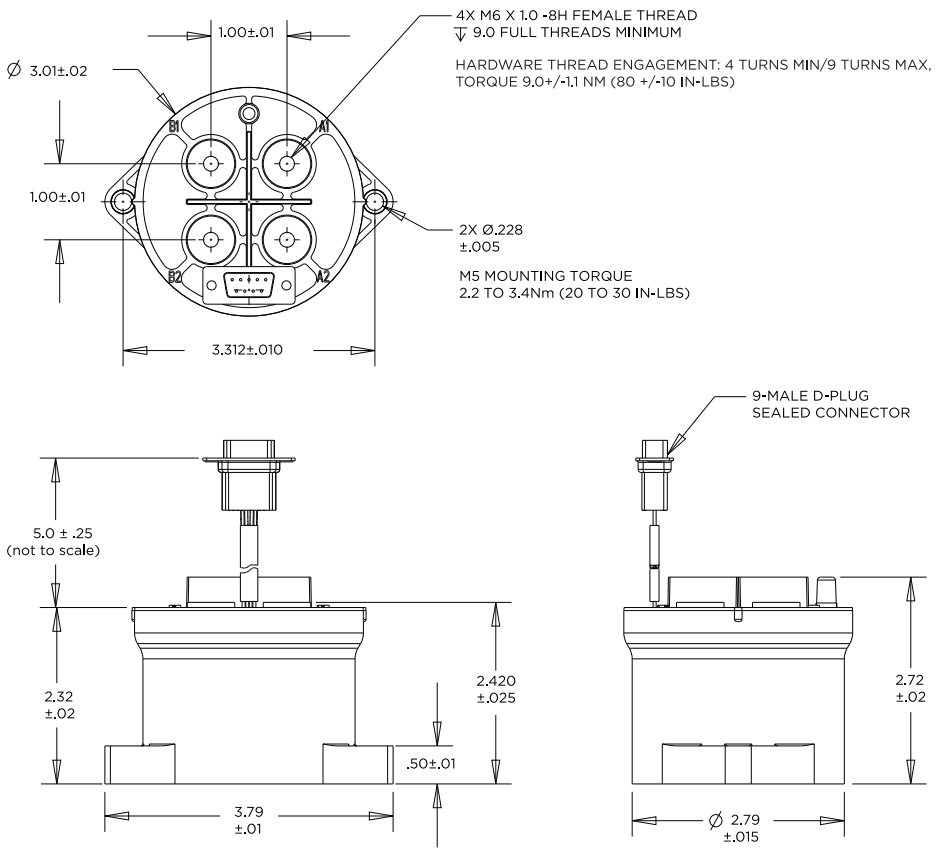

[4] Voltage applied across both contact sets in series.

[5] May not pass 2,200 Vrms dielectric testing after second interrupt cycle.

For factory-direct application assistance, dial 800-253-4560, ext. 2055, or 805-220-2055.

KILOVAC CAP200 Series Contactor with 1 Form A (SPST-NO) Contacts Rated up to 500 Amps, 12-900 Vdc

Product Facts

- **Designed to be the smallest, lightest weight, lowest cost sealed contactor in the industry with its current rating**
- **Built-in coil economizer — only 1.7W hold power @ 12VDC and it limits back EMF to 0V. (models requiring external economizer also available)**
- **Optional auxiliary contact for easy monitoring of power contact position**
- **Hermetically sealed — intrinsically safe, operates in explosive/ harsh environments with no oxidation or contamination of coil or contacts, including long periods of non-operation**
- **Versatile coil and power connections**
- **RoHS versions available**

Coil Operating Voltage (Valid Over Temperature Range)			
Voltage (Will Operate)	9-36VDC	32-95VDC	48-95VDC
Voltage (Max.)	36VDC	95VDC	95VDC
Pickup (Close) Voltage Max.	9VDC	32VDC	48VDC
Hold Voltage (Min.)	7.5VDC	22VDC	34VDC
Dropout (Open) Voltage (Min.)	6VDC	18VDC	27VDC
Inrush Current (Max.)	3.8A	1.3A	0.7A
Holding Current (Avg.)	0.13A@12V, 0.07A@24V	0.03A@48V	0.02A@72V
Inrush Time (Max.)	130ms	130ms	130ms

dial 800-253-4560, ext. 2055, or
805-220-2055.

KILOVAC CAP120 Series 900 Vdc Contactor

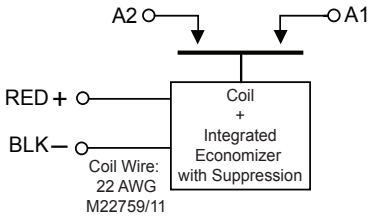

Product Facts

- Suitable for application in harsh and explosive environments
- No contact oxidation over periods of non-use
- Size reduced version of MAP/CAP 100 Series contactors
- Bidirectional switching
- Main contacts not polarity sensitive
- Panel mount
- Not position sensitive: mounts in any orientation
- Integrated dual-coil electronic “cut-throat” economizer with suppression

Applications

- Energy storage systems
- Power distribution
- High-current battery systems
- Lithium ion battery systems
- Solar power

Schematic

Description

Designed for harsh environments and loads, the new KILOVAC CAP120 contactor from TE Connectivity (TE) offers exceptional performance for a device this small and light. A reduced-size version of our popular MAP and CAP series contactors, the CAP120 contactor’s small size and light weight opens up new application possibilities for a 150 A/600 Vdc device.

High break levels—1000 A at 400 Vdc and 600 A at 600 Vdc—help increase system flexibility and reliability.

CAP120 contactors provide reliable and long-lasting performance in military ground, military and commercial aerospace, and marine applications.

KILOVAC KHR500 High-Voltage 600 Amp Contactors

Product Facts

- 600 A carry
- 3300 A break at 400 Vdc
- 4000 A make current
- Bidirectional load switching
- Safe for application in harsh and explosive environments
- Not position sensitive
- Rugged, robust design
- Smaller and up to 64% lighter than our popular EV500 BUBBA contactors
- Integrated dual-coil electronic “cut throat” economizer
- Switches voltages from 28 to 1000 Vdc

Applications

- Aerospace
- Ground vehicles
- Marine
- Solar
- Automotive
- Energy storage systems
- UL 508 recognized for US and Canada

Description

TE Connectivity’s (TE) KILOVAC KHR500 “BUBBA II” feature smaller size and lighter weight than our popular EV500 “BUBBA” high-voltage contactors. Capable of handling inrush currents as high 4000 A, the contactors are hermetically sealed for use in hazardous or explosive environments.

Configured as a single-pole, single-throw device, the contactors can handle voltages from 28 to 1000 Vdc and continuous 600 A currents.

Because it is not polarity sensitive, the contactor allows bidirectional load switching. An integrated coil economizer reduces the power required to hold the contacts closed to 320 mA at 24 Vdc.

A single-pole, double-throw auxiliary switch supports 3 A @ 125 Vrms or 1 A @ 30 Vdc, and low-level signals down to 5 V/10 mA.

Electrical Data

Main Contact Arrangement — SPST (1 Form X)

Auxiliary Contact Arrangement — SPDT (1 For C)

Voltage Rating:

Main Contact — 28 to 1000 Vdc

Auxiliary Contacts — (3 A @ 125 Vrms or 1 A @ 30 Vdc)

Current Rating:

Main Contacts, Continuous — 600 A

Contact Resistance:

Main Contacts — 0.3 mΩ max @ 600 A

Auxiliary Contacts — 150 mΩ @ 1 A

Hot Switching Performance @ 400 Vdc:

KILOVAC K1K High-Voltage Contactor

Product Facts

- Handles up to 1000 A/1000 V
- Suitable for application in harsh and explosive environments
- No contact oxidation over periods of non-use
- Bidirectional switching
- Main contacts not polarity sensitive
- Bottom or buss bar mount
- Integrated dual-coil electronic "cut-throat" economizer with internal suppression
- One of the smallest 1000 A/1000 V hermetically-sealed contactors in the industry

Applications

- Energy Storage/Battery Storage
- Power Distribution
- Alternative Energy
- Electric Vehicles (Military and Commercial)
- Test Equipment

Description

As one of the smallest, lowest cost, hermetically sealed 1000 A/1000 V switching devices in the Industry, the KILOVAC K1K contactor from TE Connectivity (TE) operates reliably in harsh and explosive environments without oxidation or contamination of contacts, even after long periods of non-operation. The K1K is well suited for power switching at voltages as low as 5 VDC and as high as 1000 VDC. Typical applications include main disconnect contactor for large battery bank applications, for carry and interrupt battery fault currents and other high current applications, power/motor control circuit isolation, and circuit protection and safety.

Electrical Data

Main Contacts

Contact Arrangement — SPST-NO (Form X)

Voltage Rating (Max.) — 1000 VDC

Current Rating, Continuous — 1000 A (At 25°C ambient with four 4/0 conductors or equivalent)

KILOVAC KCS01 Current-Sensing High-Voltage Contactor

Product Facts

- Saves space by eliminating the need for external sensor
- Simplifies design
- Flexible configuration for application needs
- Suitable for many applications in harsh, explosive, and corrosive environments
- No oxidation or contamination of contacts, including long periods of non-operation
- Extremely small size
- Lightweight contactor: 145 grams
- Bidirectional switching
- Main contacts not polarity sensitive
- Not position sensitive: mounts in any orientation
- Integrated dual-coil electronic economizer with coil suppression
- EMC compliant: no radiated coil emissions

Applications

- Energy Storage/Battery Storage
- Power Distribution
- Power Motion Control
- High-Voltage DC Converter Systems
- Alternative Energy
- Military and Commercial Electric Vehicles
- Test Equipment

Description

The new KILOVAC Current Sensing contactors from TE Connectivity (TE) eliminate the need for a discrete current sensor, saving the customer money, weight and space. The sensor function also has a programmable trip feature, allowing for immediate, delayed or disabled trip.

In addition to the integrated current sensing feature, KCS01 contactors are rugged and hermetically sealed, making them suitable for a variety of applications in harsh, corrosive and explosive environments. Even after long periods of non-operation, the contacts are impervious to oxidation and contamination.

The KCS01 contactor is extremely small and lightweight. It features bidirectional switching and an integrated dual-coil electronic economizer with internal coil suppression, and can be mounted in any orientation. Main contacts are not polarity sensitive, and the KCS01 is EMC compliant with no radiated coil emissions.

Performance Data

Main Contacts

Contact Arrangement — SPST-NO (Form X)

Voltage Rating, Switching — 600 VDC max.

Current Rating, Continuous — ±100 A

Current Rating, Short Term — ±200 A / 3 minutes

Connection Diagram

KILOVAC KCS03 Current-Sensing High-Voltage Contactor

Product Facts

- Saves space by eliminating the need for external sensor
- Simplifies design
- Flexible configuration for application needs
- Suitable for application in many harsh, explosive, and corrosive environments
- No oxidation or contamination of contacts, including long periods of non-operation
- Extremely small size
- Lightweight contactor: 500 grams
- Bidirectional switching
- Main contacts not polarity sensitive
- Not position sensitive: mounts in any orientation
- Integrated dual-coil electronic economizer with coil suppression
- EMC compliant: no radiated coil emissions

Applications

- Energy Storage/Battery Storage
- Power Distribution
- Power Motion Control
- High-Voltage DC Converter Systems
- Alternative Energy
- Military and Commercial

Description

The new KILOVAC Current Sensing contactors from TE Connectivity (TE) eliminate the need for a discrete current sensor, saving the customer money, weight and space. The sensor function also has a programmable trip feature, allowing for immediate, delayed or disabled trip.

In addition to the integrated current sensing feature, KCS03 contactors are rugged and hermetically sealed, making them suitable for a variety of applications in harsh, corrosive and explosive environments. Even after long periods of non-operation, the contacts are impervious to oxidation and contamination.

The KCS03 contactor is extremely small and lightweight. It features bidirectional switching and an integrated dual-coil electronic economizer with internal coil suppression, and can be mounted in any orientation. Main contacts are not polarity sensitive, and the KCS03 is EMC compliant with no radiated coil emissions.

Performance Data

Physical Data

Contact Arrangement — SPST-NO (Form X)

Voltage Rating, Switching — 600 VDC max.

Current Rating, Continuous — ±600 A

Current Rating, Short Term — ±1200 A / 30 sec

Contact Resistance, Main Contacts — 0.2 mΩ max. at rated current

Hot-Switching Performance, Resistive Load
1 A / 600 VDC: 1,000,000 cycles
100 A / 28 VDC: 100,000 cycles
100 A / 400 VDC: 25,000 cycles
100 A / 600 VDC: 20,000 cycles
1000 A / 28 VDC: 100 cycles
1000 A / 400 VDC: 10 cycles
1000 A / 600 VDC: 5 cycles

Maximum Pulse Through Closed Contacts — 3000 A (half cycle, 60 Hz)

Dielectric Withstanding Voltage — Between Open Contacts: 2800 Vrms
Contacts to Coil: 2800 Vrms / 4000 VDC

Insulation Resistance (Terminal to Terminal; Terminals to Coil) — Beginning of Life — 100 MΩ min. @ 500 VDC
End of Life — 50 MΩ min. @ 500 VDC

General Characteristics

Mechanical/Environmental

Mechanical Life— 1,000,000 cycles

Shock— 11 ms 1/2 sine (operating), 20 g peak

Sine Vibration— 20 g peak (operating), 55-2000 Hz

Operating Temperature Range— -40 to +105 °C

RoHS Compliant

Weight, Nominal— 500 grams

Hermetically Sealed— Safe for many harsh/corrosive environments

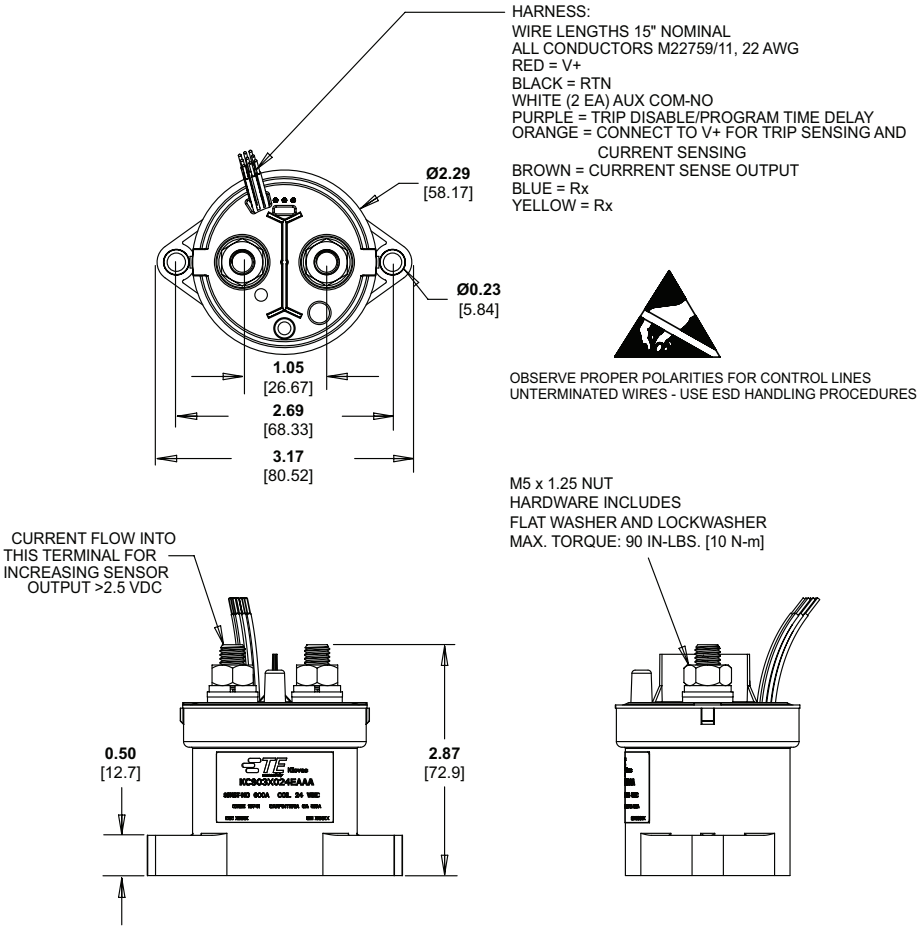

Nonoxidizing— No contact oxidation over periods of nonuse

Mounting— Not position-sensitive

Noise Emission (at 100 mm distance)— 70 dBa

For factory-direct application assistance, dial 800-253-4560, ext. 2055, or 805-220-2055.

KILOVAC EV202 High-Voltage Contactors

Product Facts

- Suitable for application in harsh, explosive, and corrosive environments
- EMC compliant: no radiated coil emissions
- Extremely small size
- Lightweight contactor: 0.77 kg
- Bidirectional switching
- Main contacts not polarity sensitive
- Not position sensitive: mounts in any orientation
- Integrated dual-coil electronic economizer with coil suppression

Applications

- Energy Storage/Battery Storage
- Power Distribution
- Power Motion Control
- High-Voltage DC Converter Systems
- Alternative Energy
- Military and Commercial Electric Vehicles
- Test Equipment

Description

Hermetically sealed and designed for harsh environments and loads, KILOVAC EV202 high-voltage contactors from TE Connectivity (TE) offers exceptional performance in an extremely small and lightweight device.

Available with 12 or 24-V coils, the contactors are suited to 270 and 400-VDC power systems. They are available with two optional auxiliary contacts.

High break levels—2000 A at 270 VDC and 700 A at 400 VDC—help increase system flexibility and reliability.

EV202 contactors provide reliable and long-lasting performance in military and commercial electric ground vehicles, energy storage systems, and power distribution and motion control applications.

Electrical Data

Configuration: Double pole, single throw, normally open

Voltage Rating, Main Contacts: 600 VDC, max.

Make Current: 700 A, max.

DWV and Insulation Resistance over Life, Terminal to Terminal/ Terminals to Coil

Dielectric Withstand Voltage: 1 mA max @ 2200 Vrms

Insulation Resistance: 50 mΩ min. @ 500 VDC

Hot Switch Life:

Make/Break Current	@ Voltage	Hot Switch Life
100 A	270 VDC	40,000
	400 VDC	10,000
250 A	270 VDC	7500
	400 VDC	2500
700 A Break Only	400 VDC	10
2000 A Break Only	270 VDC	2

Coil Data (over -40°C to +85°C unless noted)

Coil Voltage, nom./max.	12/16 VDC	24/32 VDC
Pick up voltage, max. (applied as step voltage only)	8 VDC	16 VDC
Dropout Voltage	2.5–4 VDC	3–8 VDC

Typical Schematic

(Shown with Auxiliary Contacts)

KILOVAC EV200 Series Contactor With 1 Form X (SPST-NO) Contacts Rated 500+ Amps, 12-900 Vdc

Product Facts

- **Designed to be the smallest, lightest weight, lowest cost sealed contactor in the industry with its current rating (500+A carry, 2000A interrupt at 320VDC)**
- **Built-in coil economizer — only 1.7W hold power @ 12VDC and it limits back EMF to 0V. Models requiring external economizer also available**
- **Optional auxiliary contact for easy monitoring of power contact position**
- **Hermetically sealed — intrinsically safe, operates in explosive/ harsh environments with no oxidation or contamination of coil or contacts, during long periods of non-operation**
- **Versatile coil/power connections**
- **UL Recognized for the U.S. and Canada (File E208033) All contact ratings & coil versions may not be UL Recognized**
- **CE marked for EC applications**
- **AIAG QS9000 designed, built and approved**
- **RoHS versions available**

dial 800-253-4560, ext. 2055, or
805-220-2055.

KILOVAC EV200B Series Contactor With 1 Form Y (SPST-NC) Contacts Rated 500+ Amps, 12-900 Vdc

Product Facts

- **Normally closed version of popular EV200 series contactors**
- **Designed to be the smallest, lowest cost, lightest weight sealed contactor in the industry at its current rating**
- **Optional auxiliary contacts for monitoring position of power contacts**
- **Hermetically sealed — operates in explosive/ harsh environments with no oxidation or contamination of coil or contacts during long periods of non-operation**
- **Not position sensitive, can be mounted in any orientation**
- **RoHS versions available**

Physical Data

Contact Arrangements — Main Contacts — SPST, Normally Closed

Dimensions — See drawing

Weight, Nominal — .95 lb. (.43 kg)

Environmental Data

Shock, 11ms 1/2 Sine (Operating) — 30 G_{peak} (Closed) 10 G_{peak} (Open)

Sine Vibration, 10 G_{peak} — 55-2000 Hz

Random Vibration, 7.1 Grms — 15 Hz (.001 G^2/Hz), 100 Hz (.04 G^2/Hz), 1000 Hz (.04 G^2/Hz), 1500 Hz (.02 G^2/Hz)

Operating Temperature Range — -40°C to +85°C

Electrical Data

Voltage Rating — Main Contacts (Max) — 750 Vdc

Current Rating, Continuous — Main Contacts [1] — 500A

Contact Resistance — Main Contacts [2] — 0.2 mΩ max above 300A 0.3 mΩ max between 50 and 300A

Hot Switching Performance (Positive Polarity) [3] — 200A make/ break @ 270Vdc — 10,000 cycles 600A make/ break @ 360Vdc — 100 cycles 800A break only @ 360Vdc — 15 cycles 1500A break only @ 360Vdc — 1 cycle

Mechanical Life (Min) — 1 million cycles

Dielectric Withstand Voltage — Terminal to Terminal/ Terminals to Coil — 1mA max @ 2,200 Vrms

Insulation Resistance — Terminal to Terminal/ Terminals to Coil — 100MΩ min @ 500Vdc new 50MΩ min @ 500Vdc end of life

Coil Data [4]

Nominal Coil Voltage [5] — Low range — 9.6-14 Vdc High range — 19-28 Vdc

Pick Up (Max) @ 25°C — 9.6/18.5 Vdc

Pick Up @ Max Coil Temperature — 10.5/22 Vdc

Hold (Min) — 6/12 Vdc

Dropout (Min) — 4/9 Vdc

Pickup Current, Peak [6] @ 25°C — 6 A

Operate Specs @ 25°C — Operate Time (Typ) — 15 ms Operate Bounce (Max) — 5 ms Release Time (Typ) — 15 ms

Economizer Operating Frequency — 18 kHz

Hold Current — 0.9A/12 Vdc 0.3A/24 Vdc

Notes:

1 Ambient conditions and conductor design affect rating. Terminal temperature rise should be 75°C max above ambient. Keep relay terminals below 150°C max continuous, 175°C max for two hours, and 200°C for 1 minute.

2 Stabilized reading. Contact resistance may exceed spec in the first 10 minutes of current carry.

3 Units are polarity sensitive. Approximately 50% de-rating for reverse polarity switching. Consult factory for review of specific requirements.

4 Over temperature range unless noted.

5 Voltage ranged sensed by contactor 10 ms after application of source voltage.

6 Pickup duration 100 ms.

KILOVAC EV100 Series Contactor With 1 Form X Contacts Rated 100 Amps Continuous, 600 Vdc

Product Facts

- **Hermetically sealed**
- **Operates in explosive/ harsh environments without oxidation or contamination of contacts, during long periods of non-operation**
- **8kV isolation between open contacts permits use for high voltage isolation and carry**
- **Coil economizer allows for operation between 9-36 VDC**
- **Designed and built in accordance with AS 9100**

Description

Low cost, 600 Vdc, 100 amp, hermetically sealed DC contactor

Economized coil for low power consumption between 9-36 VDC

Bottom mount, not position sensitive

One million cycle mechanical life

Applications

Power/motor control circuit isolation, circuit protection and safety in industrial machinery

Automotive battery switching and backup

Solar inverter switching

Automotive pre-charge

Test Equipment

Power distribution

Electrical

Contact arrangement: SPST-NO (Form X., Double Make)

Voltage rating: 5-600 Vdc at 100 Amps

50K cycles Make/Break: 50 Amps at 400 Vdc

25K cycles Make/Break: 50 Amps at 600 Vdc

Holding current: 0.15 Amps at 24 Vdc

Operate time: 30 ms max.

Physical or Other Properties

Hermetically sealed

Safe for harsh/corrosive environments

No contact oxidation over periods of non-use

Mechanical

Small size: 1.5” x 1.5” approximately

Weight: 130 grams

Contact Voltage Drop, Main Contacts — 0.05 max @ rated current

Resistive Load Performance (polarity sensitive) —
50A make/break @ +400Vdc — 50,000 cycles
50A make/break @ +600Vdc — 25,000 cycles
100A make/break @ +400Vdc — 6,000 cycles
100A make/break @ +600Vdc — 5,000 cycles
100A make/break @ -400Vdc — 1,000 cycles
100A make/break @ -600Vdc — 25 cycles
200A make/break @ +400Vdc — 500 cycles
200A make/break @ +600Vdc — 200 cycles
1,000A break only @ +400Vdc — 5 cycles
600A break only @ +600Vdc — 5 cycles
600A make only — 10 cycles

Maximum Short Circuit Current (1/2 cycle, 60 Hz) — 1,250A (through closed contacts)

Dielectric Withstand Voltage —
Between Open Contacts — 2,2000Vrms
Contacts to Coil — 1,500Vrms/4,000Vdc

Insulation Resistance, Terminal to Terminal / Terminals to Coil —
When New — 100 megohms, min. @ 500Vdc
At End of Life — 50 megohms, min. @ 500Vdc

Mechanical Life — 106

Operate & Release Time

Operate Time Max. — 30ms

Operate Bounce Max. — 5ms

Release Time — 10ms

Environmental Data

Shock, 11ms 1/2 sine (operating) — 20G peak

Sine Vibration, 20G peak — 55-2,000 Hz.

Operating Temperature Range — -40°C to +85°C

Noise Emission (at 100 mm distance) — 70dB(a)

Notes

[1] 8.4mm² conductor. Current rating is affected by conductor size. Keep terminals below 150˚C max. continuous.

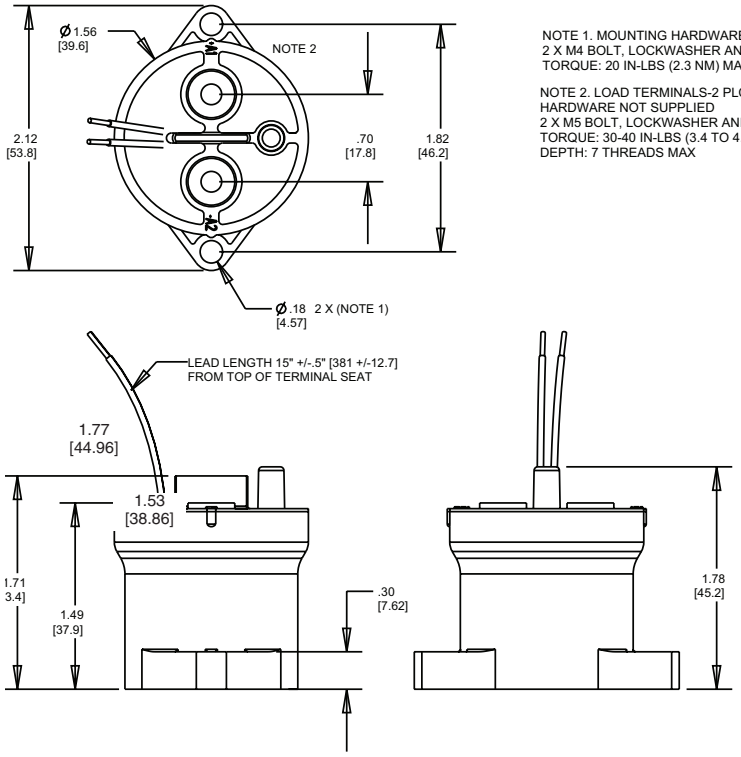

[2] 3 minutes at +40˚C ambient, 1 minute at –80˚C ambient with 8.4mm² (#8 AWG) conductor.

For factory-direct application assistance, dial 800-253-4560, ext. 2055, or 805-220-2055.

KILOVAC LEV100 Series 900 Vdc Contactor With 1 Form X Contacts Rated 100A Continuous

Product Facts

- **Hermetically sealed — Operates in explosive/ harsh environments without oxidation or contamination of contacts, including long periods of non-operation**
- **8kV isolation between open contacts permits use for high voltage isolation and carry**
- **12, 24 and 48 Vdc coils**
- **Designed and built in accordance to AIAG QS9000**
- **Not position sensitive, can be mounted in any orientation**
- **Solid copper contacts**
- **UL Recognized for the U.S. and Canada (File E208033) All contact ratings & coil versions may not be UL Recognized**
- **RoHS versions available**

Description

Lowest cost, 900 Vdc 100 amp, hermetically sealed DC contactor in the industry

Compact package available in side- or bottom-mount configurations, not position sensitive

Applications

Power/motor control circuit isolation, circuit protection and safety in industrial machinery

Automotive battery switching and backup

Mechanical

Compact epoxy-sealed resin enclosure occupies only about 4 in³ (65.5 cm³)

Robust integral mounting plate on either bottom or side of enclosure accepts two M4 screws

Inert gas filled contact chamber

Flying leads for coil connections

Load terminals threaded for M5 bolts (not included)

Performance Data

Physical Data

Contact Arrangement, Main Contacts — SPST-NO-DM (1 Form X)

KILOVAC LEV100H High-Voltage Contactor

Product Facts

- Safe for application in harsh, explosive, and corrosive environments
- No contact oxidation over periods of non-use
- Not position sensitive; available in side and bottom mount configurations
- 8 kV isolation between open contacts permits use for high voltage isolation and carry
- 12, 24, and 48 VDC coils available
- Small 1000 VDC, 150 A contactor

Applications

- Energy Storage/Battery Storage
- Power Distribution
- Alternative Energy
- Hybrid Electric Vehicles (Military and Commercial)
- Test Equipment

Description

The new KILOVAC LEV100H extended performance contactors with auxiliary contacts from TE Connectivity (TE) are designed for harsh environment and load applications. This version of our popular EV and LEV series contactors offers extremely high performance for its small size and low weight. Hermetically sealed, KILOVAC LEV100H contactors are capable of operating in harsh, explosive environments without oxidation or contamination of contacts, even after long periods of non-operation.

Mechanical/Environmental

Contact Arrangement —

Main Contacts — SPST-NO (Form X)

Auxiliary Contact — SPST-NO (Form A) (Note 1)

Dimensions — See drawings

Weight — 6.70 oz. (190 g)

Hermetically Sealed

Safe for Harsh/Corrosive Environments

Contact Oxidation — None over periods of non-use

Shock — 11 ms 1/2 sine (operating, 20 g Peak)

Sine Vibration — 20 g peak—55-2000 Hz

Operating Temperature Range—40°C to +80°C

Noise Emission (at 100 mm distance) — 70 dBa

Electrical Data

Mechanical Life — 1,000,000 cycles

Voltage Rating —

Main Contacts Switching (max.) — 1000 VDC

Continuous (Note 2) 100 A

Short Term (3 minutes) (Note 3)—200 A

Contact Voltage Drop — Main Contacts: 0.05 max. @ rated current

Resistive Load Performance (polarity sensitive) —

50 A make/break @ +1000 VDC—50 cycles

100 A make/break @ +400 VDC—1000 cycles

200 A make/break @ +400 VDC—500 cycles

1000 A break only @ +400 VDC—2 cycles

600 A make only: 10 cycles

50 A @ 400 VDC make only—25,000 cycles

Maximum Short Circuit Current (1/2 cycle, 60 Hz) (through closed contacts) — 1250 A

Dielectric Withstanding Voltage —

Between Open Contacts (Note 4) — 5600 Vrms

Contacts to Coil — 2200 Vrms

Insulation Resistance @ 500 VDC, Terminal to Terminal/ Terminals to Coil —

New — 100 MΩ min.

End of Life — 50 MΩ min.

PART drawing

KILOVAC LEV200 Series Contactor With 1 Form X Contacts Rated 500+ Amps, 12-900Vdc

Product Facts

- **Designed to be the lowest cost sealed contactor in the industry with its current rating (500+A carry, 2000A interrupt at 320Vdc)**
- **Available with bottom or side mounting — not position sensitive**
- **Optional auxiliary contact for easy monitoring of power contact position**
- **Hermetically sealed — operates in explosive/ harsh environments with no oxidation or contamination of coils or contacts, including long periods of non-operation**
- **Typical applications include battery switching and backup, DC voltage power control, circuit protection and safety**
- **Versatile coil/power connections**
- **Designed and built in accordance to AIAG QS9000**
- **RoHS compliant**

Coil Data (Valid Over Temperature Range) [4]			
Nominal Voltage	12Vdc	24Vdc	48Vdc
Pickup Voltage (Will Operate)	9.0Vdc	19.0Vdc	38.0Vdc
Voltage (Max.)	15Vdc	30Vdc	60Vdc
Dropout Voltage	0.75 - 2.0Vdc	1.0 - 5.0Vdc	2.0 - 7.0Vdc
Coil Resistance @ 25° (Typ.)	11 ohms	40 ohms	145 ohms

Ordering Information

Typical Part Number ▶ **LEV200 A 4 N A A**

Series:
LEV200 = 500+ Amp, 12-900Vdc Contactor

Contact Form:
A = Normally Open
H = Normally Open with Aux. Contacts. (Option "H" requires option "A" in Coil Wire Length and option "N" in Coil Terminal Connector.)
Note: Other auxiliary contact forms available. Consult factory.

Coil Voltage:
4 = 12Vdc 5 = 24Vdc B = 28Vdc
6 = 48Vdc K = 72Vdc
8 = 96Vdc L = 110Vdc O = 115Vac 9 = 240Vac
Notes: Consult factory for detailed specifications and availability of coils not listed in "Coil Data" table above. In coil voltage codes, 115Vac is designated by the letter "O" rather than the numeral "0."

Coil Wire Length:
A = 15.3 in (390 mm) N = None (Requires option "A" in next step.)

Coil Terminal Connector:
N = None, stripped wires (Requires option "A" in previous step.)
A = Studs, #10-32 Threaded (Electrical connection is made to the tab at the base of the stud.)
Note: Specify option A, stripped wires, for coil voltages > 96Vdc

Mounting & Power Terminals:
A = Bottom Mount & Male 10mm x M8 Threaded Terminals
F = Side Mount & Male 10mm x M8 Threaded Terminals

Consult factory regarding other available mountings and power terminals.

For factory-direct application assistance, dial 800-253-4560, ext. 2055, or 805-220-2055.

Performance Data

Contact Arrangement, Power Contacts — 1 Form X (SPST-NO-DM)

Rated Operating Voltage — 12 - 900 VDC

Continuous (Carry) Current, Typical — 500 A @ 65°C, 400 mcm conductors
Consult TE for required conductors for higher (500+ A) currents

Make/Break Current at Various Voltages [1] — See graph next page

Break Current at 320VDC [1] — 2,000 A, 1 cycle [3]

Contact Resistance, Typ. (@200A) — 0.2 mohms

Load Life — See graph next page

Mechanical Life — 1 million cycles

Contact Arrangement, Auxiliary Contacts — 1 Form A (SPST-NO)

Aux. Contact Current, Max. — 2A @ 30VDC / 3A @ 125VAC

Aux. Contact Current, Min. — 100mA @ 8V

Aux. Contact Resistance, Max. — 0.417 ohms @ 30VDC / .150 ohms @ 125VAC

Operate Time @ 25°C — Close (includes bounce), Typ. — 25 ms Bounce (after close only), Max. — 7 ms Release (includes arcing), Max @ 2000A — 12 ms

Dielectric Withstanding Voltage — 2,200 Vrms @ sea level (leakage <1mA)

Insulation Resistance @ 500VDC — 100 megohms [2]

Shock, 11ms 1/2 Sine, Peak, Operating — 20 G

Vibration, Sine, 80-2000Hz., Peak — 20 G

Operating Ambient Temperature —
-40°C to +85°C

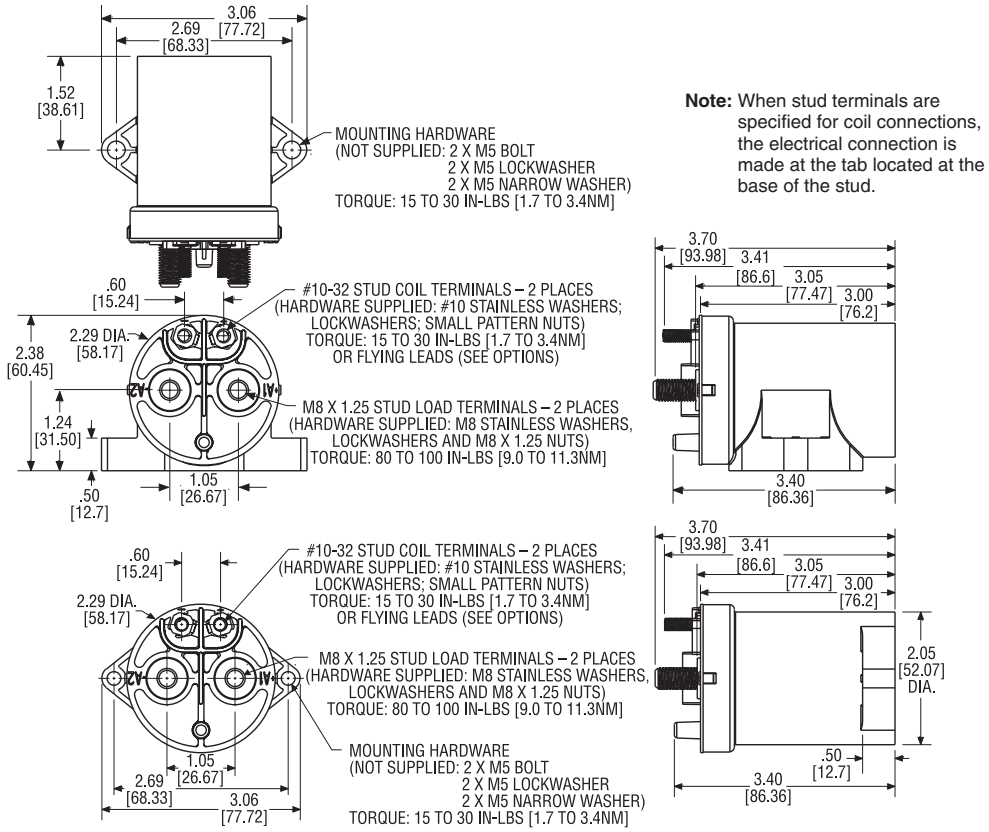

Weight, Typical — 1.3 lb. (.60 kg)

Notes:
[1] Main power contacts
[2] 50 at end of life
[3] Does not meet dielectric & IR after test, 1700 amp for unit with Aux. Contacts
[4] Contacts will operate with $0.8V_{nom} < V_{coil} < 1.1V_{nom}$ over temperature

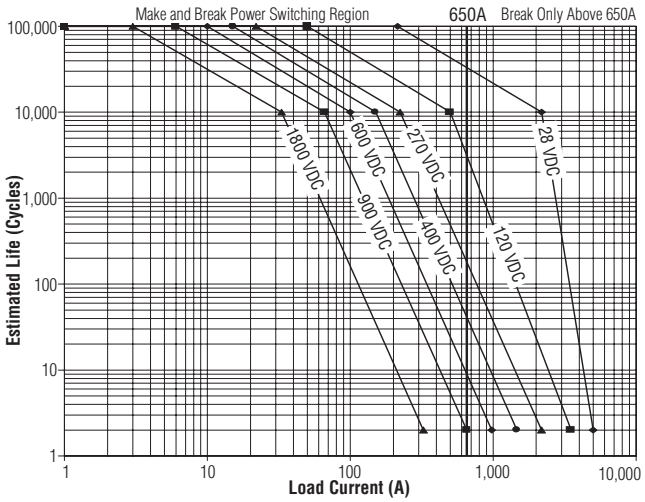

Invalid Combinations/Reason
LEV200H-NA_
No auxiliary function with coil studs
LEV200_ONA_
No coil studs with rectifier circuit
LEV200_9NA_
No coil studs with rectifier circuit
LEV200_O_F
No side mont with rectifier circuit
LEV200_9_F
No side mount with rectifier circuit

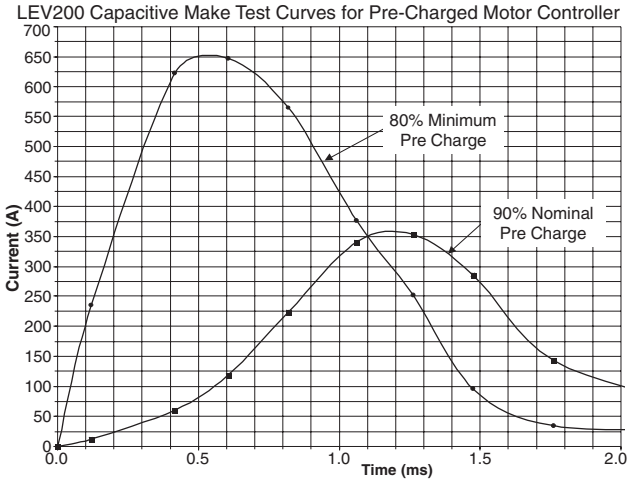

KILOVAC LEV200 Series (Continued)

Outline Dimensions

Estimated Make & Break Power Switching Ratings

NOTES:

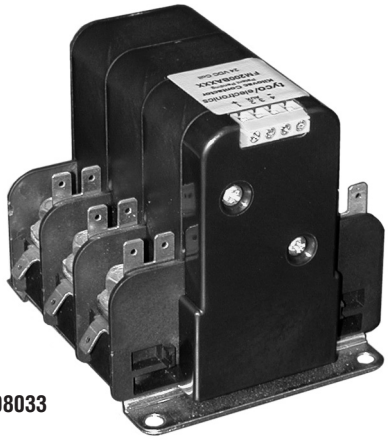

1) For resistive loads with 300µH maximum inductance. Consult factory for inductive loads.
2) Estimates based on extrapolated data. User is encouraged to confirm performance in application.
3) End of life when dielectric strength between terminals falls below 50 megohms @ 500VDC.
4) The maximum make current is 650A to avoid contact welding.

For factory-direct application assistance,
dial 800-253-4560, ext. 2055, or
805-220-2055.

FM200 ("Flatman III") Series Contactor
200 Amps, 480 VAC (50/60 Hz), or 48 Vdc, 1-, 2-, or 3-poles

Product Facts

- Multi-pole configurations
- Normally open, normally closed and mixed contact arrangements
- Optional quick connect tabs for sensing
- Small, lightweight & cost-effective – designed to be the smallest, lowest cost contactor in the industry with its current rating
- Standard models available with 12VDC, 24VDC and 115 VAC coils. Consult factory for 240VAC coil models.
- 1 Form A auxiliary contacts

AP90X-05 - 90 Amps SPUD Contactor

Product Facts

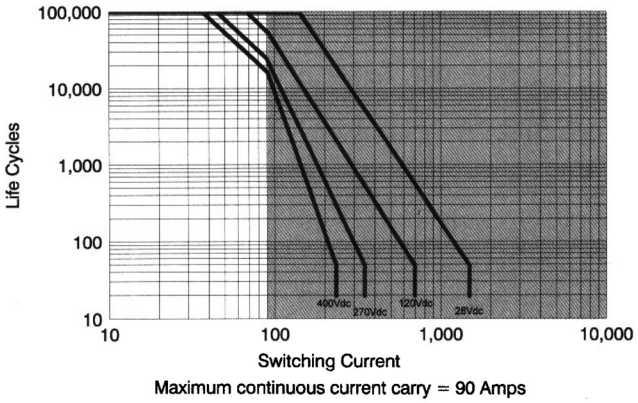

- 90 A carry, 350 A overload @ 270 Vdc
- Same size and weight as AP50X
- Versatile power, voltage, and current operating range
- Ideal for circuit protection and control
- Bi-directional switching
- Fast operate and release time
- Low power consumption
- Vacuum-sealed contacts; can operate in harsh environments
- Space-rated version built in accordance with customers SCD
- Meets many requirements of MIL-PRF-32085

Contact Ratings*

Maximum continuous current carry = 90 Amps

*Based on data extrapolated from qualification at 270 Vdc with resistive load. Since each application is unique, user is encouraged to verify rating in actual application.

Product Specifications

Contact Arrangement — SPST-NO

Contact Form — X

Rated Resistive Load @ 270 Vdc — 90 A

Continuous Current Carry, Max. — 65 A

Overload @ 270 Vdc — 350 A

Contact Resistance, Max. — 2 mohm

Dielectric at Sea Level — Coil to Power Terminals — 1,800 Vrms All Other Points — 2,000 Vrms

Shock, 11ms, 1/2 Sine (Peak) — 30 g

Vibration, Sinusoidal (55-2000 Hz, Peak) — 20 g

Operating Ambient Temperature Range — -55°C to +90°C

Load Life @ 270 Vdc, Min. — 25,000 cycles

Operate Time, Excluding Bounce, Max. — 35 ms

Release Time, Max. — 10 ms

Bounce Time, Max. — 8 ms

Insulation Resistance @ 500 Vdc, Min. — Initial — 100 mohm End of Life — 50 mohm

Weight, Nominal — 454 gram (16 oz.)

Coil Data

Volts, Nominal	12	28	120
Pickup, Max.	9.9 Vdc	23 Vdc	99 Vdc
Dropout, Min.	.4 Vdc	1.0 Vdc	4.0 Vdc
Coil Resistance (±10%)	19 Ω	103 Ω	1890 Ω
Energy, Magnetic, Max.	.05 J	.05 J	.05 J

Coil resistance rated at 25°C

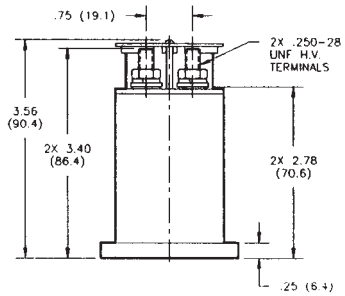

For factory-direct application assistance, dial 800-253-4560, ext. 2055, or 805-220-2055.

AP150X (Form X, Electrically Held)

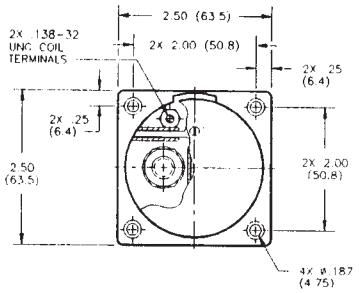

CZONKA Contactor

Product Facts

- 150 A carry, 500 A overload @ 270 Vdc
- Suitable for circuit protection, control, and battery switching
- Versatile power, voltage, and current operating range
- Bi-directional switching
- Electrically held and latching coil versions
- Fast operate and release time
- Low power consumption
- Vacuum-sealed contacts; can operate in harsh environments
- Space-rated version built in accordance with customers SCD
- Meets many requirements of MIL-PRF-32085

Product Specifications

Contact Arrangement — AP150X — SPST-NO

Contact Form — AP150X — X

Rated Resistive Load @ 270 Vdc — 150 A

Continuous Current Carry, Max. — 150 A

Overload Make & Break @ 270 Vdc — 400/500 A*

AP265 (Form X, Electrically Held) & AP265P (Form P, Latching) 265 Amps

CZONKA II Contactor

Product Facts

- 265 A carry, 1000 A overload @ 270 Vdc
- Bi-directional power switching
- Auxiliary Contacts
- Electrically held and latching coil versions
- Built-in coil drivers for electrically held (5W hold) and latching (coil pulser)
- Coil divers EMC qualified to most of the requirements of MIL-STD-461D
- Versatile power, voltage, and current operating range
- Excellent for safety disconnect and transfer switch applications
- Designed for main generator loads
- Suitable for circuit protection and control
- Remote Power Controller version with overload protection available — contact factory for more information
- Hermetically-sealed contacts; can operate in harsh environments
- Space-rated version built in accordance with customers SCD
- Meets many requirements of MIL-PRF-32085

EV250-1A & 1B 400 Amps CZONKA-II EVX Make & Break Load Switching

Product Facts

- Hydrogen dielectric for power switching high current loads
- 400 A carry, 2,500 A interrupt @ 320 Vdc
- Suited for circuit protection, control, battery switching, and main power safety disconnect
- Versatile power, voltage, and current operating range: 28-1800 Vdc tested
- Low-cost compact version for volume production applications. Requires external coil economizer (PWM or lower hold voltage)
- "Hammer effect" mechanism breaks light contact welds
- "Super-sealed" environment chamber uniquely protects ALL moving parts
- Can operate in harsh environments
- Moving contact rotates to provide fresh contact surface for low contact resistance and low power consumption
- Sealed control connector. Mating connector with flying leads Part Number 2005 available, see page 7-95
- Logic control enabled by external economizer Part Number 9913
- High temperature (135°C) model with 10 inch flying leads available (-4A — Call TE for sales drawing)
- Bi-directional power switching
- Fast operate and release time

Note: Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

Product Specifications

Contact Arrangement — SPST-NO

Contact Form — X

Continuous Current Carry, Max. — 400 A; 6.5 Minutes — 500 A

Break Current @ 320 Vdc — 2,500 A

Contact Resistance, Max. — 0.0003 ohm

Contact Resistance, Typ. — 0.0001 – 0.0002 ohm

Dielectric at Sea Level (Leakage < 1mA) — 2,200 Vrms

Shock, 11ms, 1/2 Sine (Peak), Operating — 30 g

Vibration, Sinusoidal (80-2000 Hz, Peak) — 20 g

Operating Ambient Temperature Range — -40°C to +85°C

EV250-2A & 2B 400 Amps CZONKA II EVX Make & Break Load Switching

Product Facts

- Hydrogen dielectric for power switching high current loads
- 400 A carry, 2,500 A interrupt @ 320 Vdc
- Suited for circuit protection, control, battery switching, and main power safety disconnect
- Versatile power, voltage, and current operating range: 28-1800 Vdc tested
- Internal coil economizer provides:
  - 4W typical hold power independent of temperature & voltage range
  - EMI spectrum tested and approved
  - Built-in coil suppression
- "Hammer effect" mechanism breaks light contact welds
- Hermetically "Super-sealed" environment chamber uniquely protects ALL moving parts
- Can operate in harsh environments
- Moving contact rotates to provide fresh contact surface for low contact resistance and low power consumption
- Sealed control connector. Mating connector with flying leads Part Number 2005 available
- Special versions available:
  - Economical (-8A/B) for light duty power switching (without arc blowout magnets)
  - 10 inch flying leads model (-7A)

Note: Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

Dielectric at Sea Level (Leakage < 1mA) —
Open Power Terminal to Terminal — 2,000 Vrms
Closed Power Terminals to All Other Points — 2,000 Vrms

Shock, 11ms, 1/2 Sine (Peak), Operating — 30 g

Vibration, Sinusoidal (80-2000 Hz, Peak) — EV500-5 — 5 g
EV500-4 — 10 g

Operating Ambient Temperature Range — -40°C to +85°C

Load Life (Mechanical/ Electrical) [2] — See next page

Operate Time @ 25°C —

Close (Includes Bounce), Typ. — 40 ms

Bounce (After Close Only), Max. — 5 ms

Release Time (Includes Arcing), Max. at 2500 A — 20 ms

Insulation Resistance @ 500 Vdc, Min. — 100 mohm

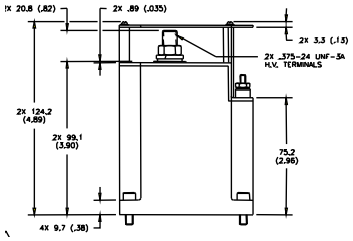

Weight, Nominal —
3.38 lb (1.53 kg)

Notes:
1. Current Carry: 750 A @ 25°C. Derate 2.5 A/°C to 600 A @ 85°C for still air, no heat sink. Reference National Electric Code for specific conductor size recommendation versus current. For > 600 A carry, call TE and request the "EV500 Current Carry study" for additional data.
2. See EV500 sales drawing for complete specifications, including normal capacitive pre-charge make, plus abnormal make and break ratings.

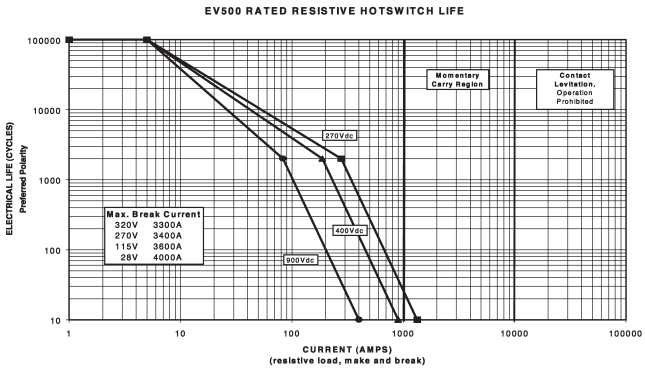

Coil Data

	12 V	24 V
Type Driver	2 Coil Electronic	
Volts, Nominal*	12 Vdc	24 Vdc
Pickup (Close), Max.	9.9 Vdc	19.7 Vdc
Hold, Min.	9 Vdc	18 Vdc
Dropout (Open), Min.	2 Vdc	4 Vdc
Current (@ VsNom / 25°C)		
Inrush	3.3 A	1.7 A
Holding, Standby	0.74 A	0.37 A
Inrush Time, Max.	300 ms	300 ms

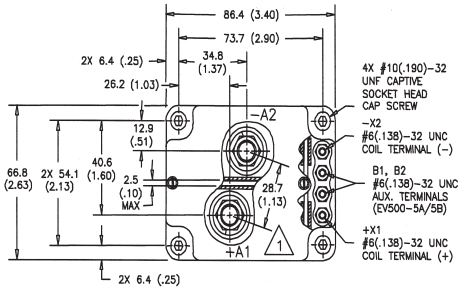

Electrical Life Cycles vs Power Switching

*Failure mode: Dielectric withstand voltage test @ 2000 Vdc, power terminal to terminal, leakage exceeds 1.0 A.

Ordering Information

Sample Part Number ▶ **EV500 4 A**

EV500 "BUBBA" Contactor 600 Amps, Make & Break Load Switching (Continued)

Current vs Time

Life Ratings and Qualification Test Plan

	Normal Operations		Abnormal Operations	
Test #	**1**	**2**	**3**	**4**
Current	Reference Graph and Test Circuit Diagram (Sht. 8)		-250 A	3300 A
Voltage			320 V	320 V
Load Type	Capacitive	Capacitive	Resistive	Resistive
% Pre Charge	90%	70%	NA	N/A
Switch Mode	Make Only	Make Only	Make/Break	Break Only
Sequence				
1	10K cycles	10 cycles	2	2
2	10K	10	2	—
3	10K	10	2	—
4	10K	10	2	2
5	10K	10	2	—
Etc.	Continue Cycling to Relay Failure			

The testing objective is to verify proper relay function for a given number of consecutive and cumulative cycles under both normal and abnormal conditions in a variety of load switching applications. The life rating of 40K cycles minimum was calculated with 95% Weibull reliability.

Electrical Data (Over Temperature Range — Max. Terminal Temp. = 200°C)

Make/Break Life for Capacitive & Resistive Loads at 320 Vdc [1,2] —
@ 90% Capacitive Pre-Charge — 50,000 cycles
@ 70% Capacitive Pre-Charge — 50 cycles
@ -250 A (2 Consecutive, Reverse Polarity) [1] — 10 cycles
@ 3300 A (Break only, 2 Consecutive) [1] — 4 cycles

Mechanical Life — 100,000 cycles

Notes:
1 Resistive load includes inductance L = 25 µH.
2 Testing is limited at this time. Consult TE for official ratings.

For factory-direct application assistance, dial 800-253-4560, ext. 2055, or 805-220-2055.

PD350X - 500 Amps "BUBBA" Contactor, Make & Break Load Switching

Product Facts

- **500 A carry, 1300 A make overload, 3000 A break overload, @ 320 Vdc**
- **Hydrogen dielectric for power switching high current loads**
- **Auxiliary contacts**
- **Coil power economizing — 8 W holding**
- **Versatile power, voltage, and current operating range**
- **Excellent for safety disconnect and transfer switch applications**
- **Suited for circuit protection and control**
- **Bi-directional power switching**
- **Hermetically-sealed contacts; can operate in harsh environments**
- **Fast operate and release time**
- **Low power consumption**

For factory-direct application assistance, dial 800-253-4560, ext. 2055, or 805-220-2055.

Contact Rating Notes:
1. Maximum continuous current carry = 500A @ 25°C = T_A, derate 5A/°C for higher temp.
2. Maximum interrupt power (break only) = 1 MW @ 200mH inductance.

Product Specifications

Contact Arrangement — Form X — SPST-NO

Auxiliary Contact (28 Vdc, 0.1 A) — SPST-NO

Rated Resistive Load @ 320 Vdc — 300 Amps @85°C

Continuous Current Carry, Max. @ 50°C — 500 A

Overload Current @ 320 Vdc — Make — 1,300 A
Break — 3,300 A

Load Life, @ 320 Vdc, Min. — See chart at right

Contact Resistance, Max. — End of Life — 0.0002 ohm

Dielectric at Sea Level — Power Terminals to Coil and All Other Points — 1,800 Vrms

Shock, 11ms, 1/2 Sine (Peak) — 30 g

Vibration, Sinusoidal (55-2000 Hz, Peak) — 5 g

Operating Ambient Temperature Range — -40°C to +85°C

Operate Time, Including Bounce, Max., 25°C — 40 ms

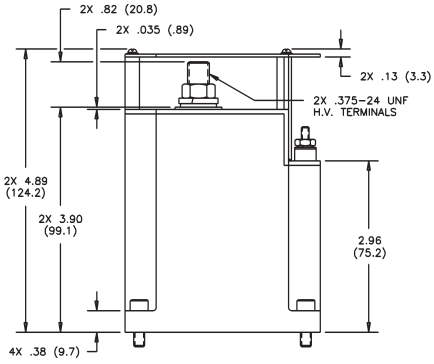

Release Time, Max. — 20 ms

Bounce Time, Max. — 5 ms

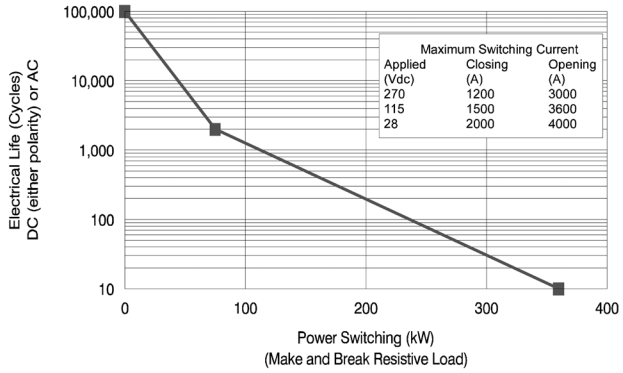

Insulation Resistance @ 500 Vdc, Min. — Initial — 100 mohm
End of Life — 50 mohm

Weight, Nominal — 3.4 lb (1.52 kg)

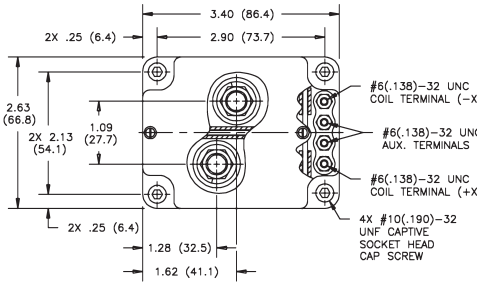

Electrical Life Cycles vs Power Switching

*Failure Mode: Dielectric withstand voltage test @ 2000 Vdc, power terminal to terminal, leakage exceeds 1.0 mA. Current carry: 500 A @ 25°C. Derate 2.5 A/°C to 350 A @ 85°C for still air, no heat sink, AWG# 00 conductor.

Coil Data

Volts, Nominal	12 V	24 V
Pickup, Max. @ 65°C	9.9 Vdc	19.7 Vdc
Hold, Max. @ 65°C	8.5 Vdc	17 Vdc
Dropout, Min. @ -35°C	1.2 Vdc	2.4 Vdc
Coil Power** 25°C		
During Pickup (300 ms)	43 W	43 W
While Holding	8 W	8 W
Energy, Magnetic, Max.***	.26 J	.26 J

**Two coils are employed for power economizing subsequent to pickup. During pickup both coils operate in parallel drawing 43 Watts momentarily. After pickup, the electronic economizing system leaves only the holding coil on, drawing 8 Watts @ 25°C. Economizing system includes transient voltage suppression.

***Coil energy absorbed internally -4x nominal voltage.

AP5/AP10 Relays

Product Facts

- **AP5 make and break 5 A; AP10 make and break 10 A @ 270 Vdc**
- **20 A overload rating**
- **Latching actuator available for low power consumption**
- **Ideal for applications from 28 to 1000 Vdc**
- **Small size and weight**
- **Wide variety of mounting styles (see pages 54 and 55)**
- **No heat sinks required**
- **2000 V isolation across open contacts**
- **Vacuum-sealed contacts; can operate in harsh environments**
- **Qualified to SAE ARD 50031**
- **Space-rated version built in accordance with customers SCD**

- 2000 V isolation across open contacts
- Vacuum dielectric for power switching

For factory-direct application assistance, dial 800-253-4560, ext. 2055, or 805-220-2055.

Panel mount version shown above is applicable to both PD5 and PD10. For PD10, the two power terminals are .064" (1.63) diameter. Refer to PD5 for PCB mount dimensions.

Product Specifications

Contact Arrangement —
PD10A — SPST-NO
PD10B — SPST-NC
PD10P*** — SPST-Latching

Contact Form —
PD10A — A**
PD10B — B**
PD10P*** — P**

Rated Resistive Load @ 320 Vdc — 10 A

Continuous Current Carry, Max. @ 85°C —
PD10A and PD10B — 25 A
PD10P*** — 30 A

Overload @ 320 Vdc, (Make/Break) — 20 A

Life, (Mechanical/Rated Load) —
PD10A and PD10B —
500k cycles/10k cycles
PD10P*** — 7,000 cycles

Contact Resistance, Max., End of Life —
PD10A and PD10B — 0.010 ohm
PD10P*** — 0.030 ohm

Dielectric at Sea Level —
Power Terminals to Coil and All Other Points —
PD10A and PD10B — 1,800 Vrms
PD10P*** — 2,000 Vrms

Shock, 11ms, 1/2 Sine (Peak) — 25 g

Vibration, Sinusoidal (55-2000 Hz, Peak) — 5 g

Operating Ambient Temperature Range —
PD10A and PD10B — -40°C to +85°C
PD10P*** — -35°C to +65°C

Operate Time, Max., Including Bounce @ 25°C —
PD10A and PD10B — 10 ms
PD10P*** — 6 ms

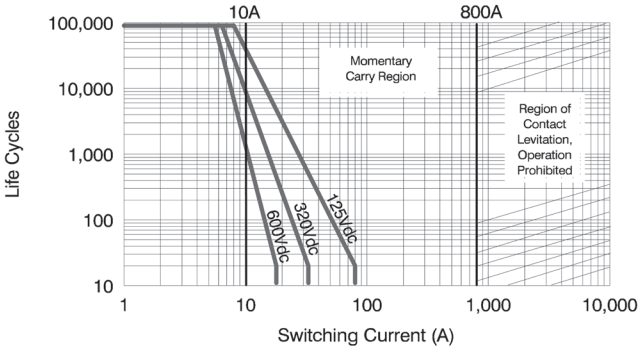

Release Time, Max., Including Bounce @ 25°C —
PD10A and PD10B — 10 ms
PD10P*** — 6 ms

Insulation Resistance @ 500 Vdc, Min. —
Initial/End of Life — 100 mohm/50 mohm

Weight, Nominal —
71 g (.156 lb)

Notes:
**Contact TE for availability of other contact forms
***Not available in package shown, package is the same as the K41P.

Contact Ratings*

*Based on extrapolated data. Since each application is unique, user is encouraged to verify rating in actual application. The load terminals should always be connected as follows: Common Contact (A2) positive; Other Contact negative.

Coil Data

Nominal Volts DC	12 Vdc	24 Vdc	125 Vdc
Max. Coil Voltage	14 Vdc	28 Vdc	130 Vdc
Pickup, Max. @ 85°C	8 Vdc	16 Vdc	80 Vdc
Hold, Min. @ 85°C	3.3 Vdc	10 Vdc	33 Vdc
Dropout, Min. @ -40°C	.5 Vdc	1 Vdc	5 Vdc
Coil Resistance (±10%)	70 Ω	290 Ω	4700 Ω

Ratings listed are for 25°C, sea level conditions

K45 Series Make & Break Load Switching — 1.5 - 2 kV Relays

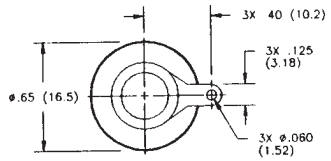

K45C

Product Facts

- Small, low profile 2 kV relay
- Vacuum dielectric for power switching low current loads
- Single pole, double throw contacts
- Widely used in H.F. communication equipment
- Meets requirements of MIL-R-83725
- Low power consumption

Product Specifications

Contact Arrangement — SPDT

Contact Form — C

Test Voltage, DC or 60 Hz (Peak) — 4 kV

Rated Operating Voltage (Peak) —
DC or 60 Hz — 2 kV
2.5 MHz — 1.8 kV
16 MHz — 1.4 kV
32 MHz — 1.1 kV

Continuous Carry Current, Max. —
DC or 60 Hz — 20 A
2.5 MHz — 16 A
16 MHz — 10 A
32 MHz — 6 A
Coil Hi-Pot (Vrms, 60 Hz) — 500 A

Contact Capacitance —
Between Open Contacts — 1.6 pF
Open Contacts to Ground — 2 pF

Contact Resistance, Max. — 0.05 ohm

Operate Time, Max. — 10 ms

Release Time, Max. — 10 ms

Shock, 11ms, 1/2 Sine (Peak) — 30 g

Vibration —
Peak — 10 g (10 to 2000 Hz)

Operating Ambient Temperature Range — -55°C to +125°C

Mechanical Life
2 million cycles

Weight, Nominal —
21.26 g (0.75 oz.)

Coil Data

Volts, Nominal DC	12 V	26.5 V
Pickup, Max.	8 Vdc	16 Vdc
Hold, Max. @ 65°C	8.5 Vdc	17 Vdc
Dropout	.5-5 Vdc	1-10 Vdc
Coil Resistance (±10%)	230 Ω	920 Ω

Ratings listed are for 25°C, sea level conditions.

HC Series — 3.5 kV Relays

HC-1
No Load Switching

HC-3
Make & Break Load Switching

Product Facts for HC-1

- Widely used for RF applications
- Vacuum dielectric for low leakage current applications
- Copper contacts for high current capability
- Not designed for power switching
- Meets requirements of MIL-R-83725
- QPL version available, M83725/5-001

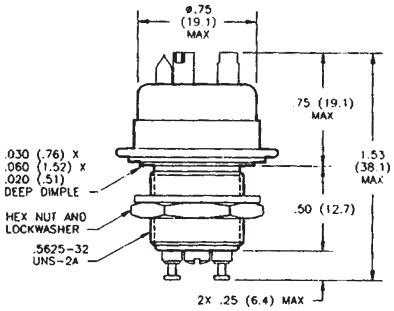

Product Facts for HC-3

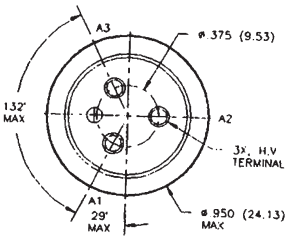

- Tungsten contacts for long life when power switching
- Vacuum dielectric for power switching low current loads

For factory-direct application assistance, dial 800-253-4560, ext. 2055, or 805-220-2055.

HC-5
Make Only Load Switching

Product Facts for HC-5

- Gas-filled for "make only" power switching
- SF-6 gas-filled for capacitive discharge applications
- Tungsten contacts for long life when power switching

Product Specifications for HC-1, HC-3 and HC-5

Contact Arrangement — SPDT

Contact Form — C

Test Voltage, DC or 60 Hz (Peak) — 5 kV

Rated Operating Voltage (Peak) —
DC or 60 Hz — 3.5 kV
2.5 MHz — 2.5 kV
16 MHz — 2 kV
32 MHz — 1.5 kV

Continuous Carry Current, Max. —
DC or 60 Hz — HC-1 — 25 A
HC-3 — 18 A
HC-5 — 8 A
2.5 MHz — HC-1 — 14 A

16 MHz — HC-1 — 9 A

32 MHz — HC-1 — 7 A

Coil Hi-Pot (Vrms, 60 Hz) — 500 A

Contact Capacitance —
Between Open Contacts —
HC-1 —2 pF

Open Contacts to Ground —
HC-1 —2.5 pF

Contact Resistance, Max. —
HC-1 — 0.01 ohm
HC-3 — 0.02 ohm
HC-5 — 0.50 ohm*

Operate Time, Max. — 6 ms

Release Time, Max. — 6 ms

Shock, 11ms, 1/2 Sine (Peak) — 50 g

Vibration —
Peak — 10 g (55 to 2000 Hz)

Operating Ambient Temperature Range — -55°C to +125°C

Mechanical Life —
HC-1, HC-3 — 2 million cycles
HC-5 — 1 million cycles

Weight, Nominal —
28.35 g (1.0 oz.)

Note:
*Contact resistance for gas-filled relays is measured at 28 Vdc, 1 Amp

Coil Data

Pickup, Max.	8 Vdc	16 Vdc	80 Vdc
Dropout	.5-5 Vdc	1-10 Vdc	5-50 Vdc
Coil Resistance (±10%)	80 Ω	335 Ω	6000 Ω

Ratings listed are for 25°C, sea level conditions

K40P Make & Break Load Switching — 5.0 kV Relays

Product Facts for K40P

- Vacuum dielectric for power switching low current loads
- Fast, 1 millisecond operate time
- Long life: 10 million cycles
- 35 Amps continuous current rating at DC; 8 Amps at 32 MHz
- Ideal for high power antenna couplers
- Meets requirements of MIL-R-83725

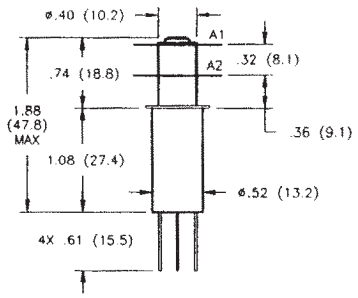

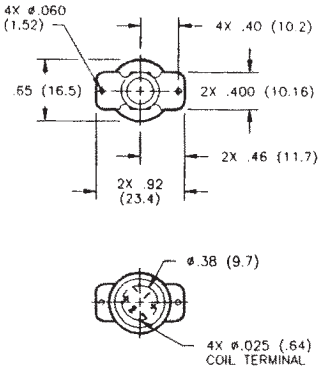

Product Facts for K40P364

- Double sided terminals for ease of connection to bus bar
- Vacuum dielectric for power switching low current loads
- Fast switching, high current capabilities
- Small and lightweight

Product Specifications

Contact Arrangement — SPST-Latching

Contact Form — P

Test Voltage, DC or 60 Hz (Peak) — 6 kV

Rated Operating Voltage (Peak) — DC or 60 Hz — 5 kV
2.5 MHz — 4.5 kV
16 MHz — 3.5 kV

K47 Series Make & Break Load Switching — 8 kV Relays

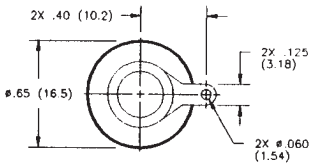

K47A

Product Facts for K47A

- Widely used in antenna coupler applications
- Short actuator, low profile, 8 kV relay
- Vacuum dielectric for power switching low current loads
- Normally open contacts
- Meets requirements of MIL-R-83725

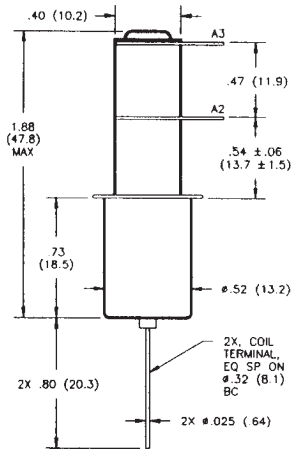

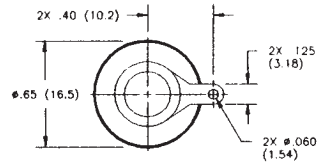

K47B

Product Facts for K47B

- Normally closed version of K47
- Vacuum dielectric for power switching low current loads
- 707 Ohm coil for low power consumption
- Meets requirements of MIL-R-83725
- QPL version available, M83725/18-003

Product Specifications for K47A and K47B

Contact Arrangement —
K47A — SPST-NO

HC Series — 8 kV Relays

HC-2
No Load Switching

HC-4
Make & Break Load Switching

Product Facts for HC-2

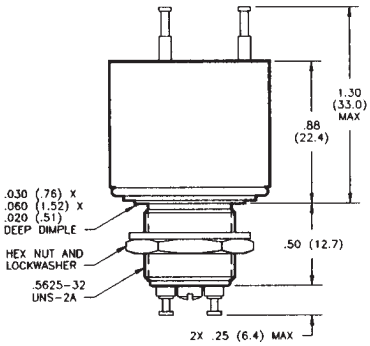

- Vacuum dielectric and copper contacts for high current carry rating of 25 Amps
- Not designed for power switching
- Stable, low contact resistance
- Meets requirements of MIL-R-83725

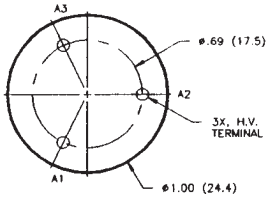

Product Facts for HC-4

- Tungsten contacts for long life in power switching applications
- Vacuum dielectric for arc suppression when making or breaking a load
- Meets requirements of MIL-R-83725

HC-6
Make Only Load Switching

Product Facts for HC-6

- Tungsten contacts for switching high in-rush loads
- SF-6 gas-filled for capacitive discharge applications
- Suitable for ESD testing applications
- Tungsten contacts for long life in power switching applications

Product Specifications for HC-2, HC-4 and HC-6

Test Voltage, DC or 60 Hz (Peak) — 9kVdc

Rated Operating Voltage (Peak) —
DC or 60 Hz — 8 kV
2.5 MHz — 7 kV
16 MHz — 6 kV
32 MHz — 4 kV

Continuous Carry Current, Max. —
DC or 60 Hz — 50 A
2.5 MHz — 40 A
16 MHz — 25 A
32 MHz — 20 A
Coil Hi-Pot (Vrms, 60 Hz) — 500 A

Contact Capacitance —
Between Open Contacts — 2.5 pF
Open Contacts to Ground — 2.8 pF

Contact Resistance, Max. — 0.01 ohm

Operate Time, Max. — 5 ms

Release Time, Max. — N/A

Shock, 11ms, 1/2 Sine (Peak) — 50 g

Vibration —
Peak — 20 g (55 to 2000 Hz)

Operating Ambient Temperature Range — -55°C to +85°C

Mechanical Life — 1 million cycles

Weight, Nominal —
59.53 g (2.1 oz.)

Coil Data

Volts, Nominal	26.5 Vdc
Latch & Reset, Max.	23 Vdc
Dropout	N/A
Coil Resistance (±10%)	155 Ω

Ratings listed are for 25°C, sea level conditions

Ordering Information

Sample Part Number ▶ **K44 P 3 3 4**

Series:

Contact Form:
P = SPST-Latching

Coil Voltage:
3 = 26.5 Vdc, Bus Wire

High Voltage Connections:
3 = Solder Connection

Mounting:
2 = Flanged
4 = Standard

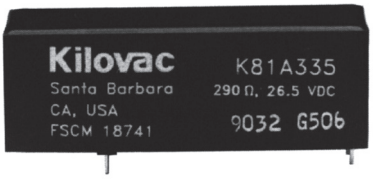

***See page 7-87 for mounting methods.**

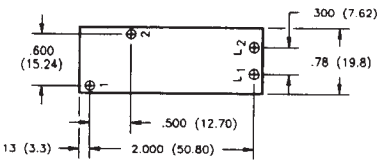

For factory-direct application assistance, dial 800-253-4560, ext. 2055, or 805-220-2055.

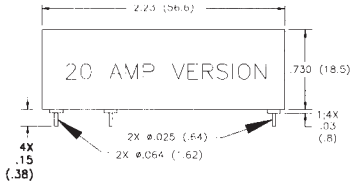

K81 A/B Series Make & Break Load Switching — 10 kV Relays

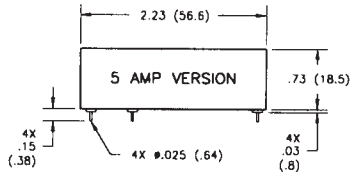

Product Facts

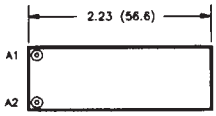

- 10 kV PC board-mount relay
- Vacuum dielectric for power switching low current loads
- Flying leads or PCB mount for high voltage connections
- Meets requirements of MIL-R-83725
- Completely sealed; suitable for test equipment
- Panel mount available for ease of mounting

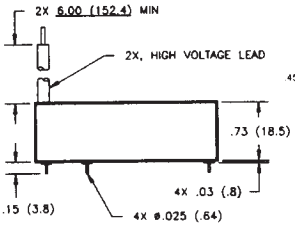

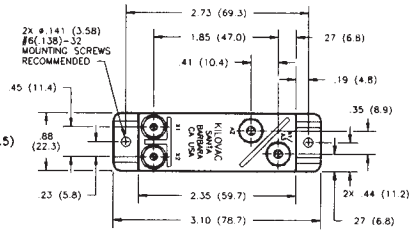

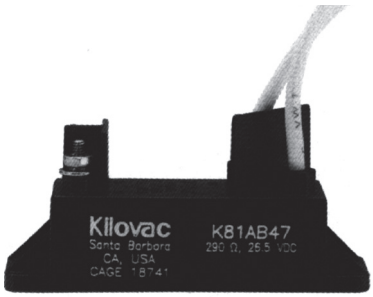

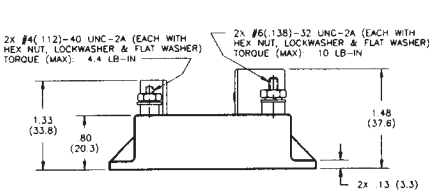

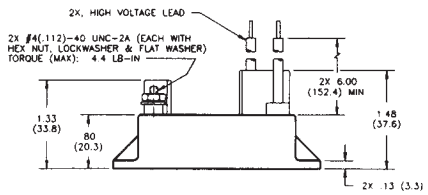

Product Specifications

Contact Arrangement —
K81A — SPST-NO
K81B — SPST-NC

Contact Form —
K81A — A
K81B — B

Test Voltage, DC or 60 Hz (Peak) — 11 kV

Rated Operating Voltage (Peak) — DC or 60 Hz — 10 kV

Continuous Carry Current, Max. — DC or 60 Hz — 5 A, 20 A or 30 A 1
Coil Hi-Pot (Vrms, 60 Hz) — N/A

Contact Resistance, Max. — 0.03 ohm

Operate Time, Max. — 10 ms

Release Time, Max. — 10 ms

Shock, 11ms, 1/2 Sine (Peak) — 30 g

Vibration —
Peak — 10 g (55 to 500 Hz)

For factory-direct application assistance, dial 800-253-4560, ext. 2055, or 805-220-2055.

Operating Ambient Temperature Range — -55°C to +85°C

Mechanical Life — 2 million cycles

Weight, Nominal — 56.7 g (2 oz.)

Notes:
1. PC pin versions carry 5 or 20 Amps, see part number at right. Flying lead and panel versions carry 30 Amp.
*Power terminal on 20 Amp version is a larger diameter than on the 5 Amp version (.025 = 5 Amp, .064 = 20 Amp)

Coil Data

Volts, Nominal DC	12 V	26.5 V	115 V
Pickup, Max.	8 Vdc	16 Vdc	80 Vdc
Dropout	.5-5 Vdc	1-10 Vdc	5-50 Vdc
Coil Resistance (±10%)	70 Ω	290 Ω	4700 Ω

Ratings listed are for 25°C, sea level conditions

Ordering Information

Sample Part Number ▶ K81 A 3 3 5

Series: K81

Contact Form:
A = SPST-NO B = SPST-NC

Coil Voltage:
2 = 12 Vdc, PC Board 3 = 26.5 Vdc, PC Board
5 = 115 Vdc, PC Board
A = 12 Vdc, Stud Terminals, Panel Mount
B = 26.5 Vdc, Stud Terminals, Panel Mount
C = 115 Vdc, Stud Terminals, Panel Mount

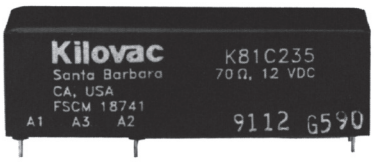

High Voltage Connections:
A* = PCB Solder Connection — 20 Amp
3 = PCB Solder Connection — 5 Amp
4 = Flying Leads 5 = Stud Terminals

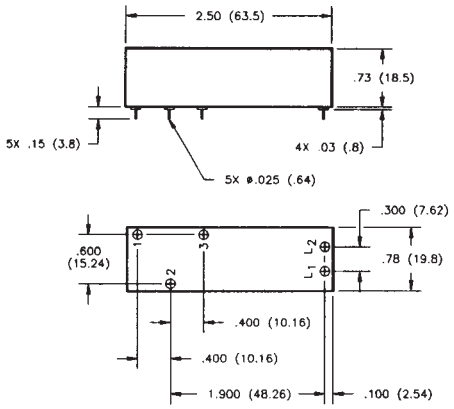

Mounting:
5 = PC Board 7 = Panel Mount

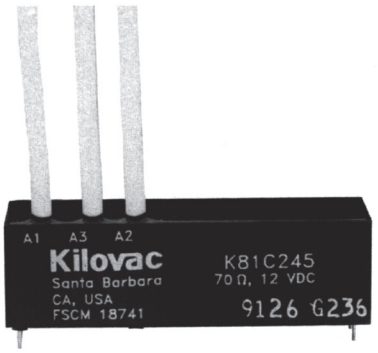

K81C Series Make & Break Load Switching — 10 kV Relays

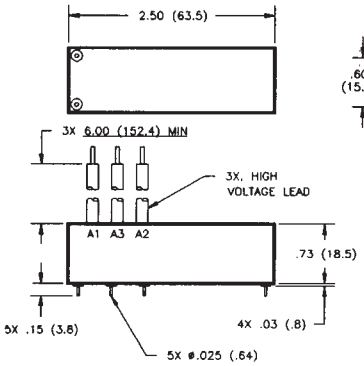

Product Facts

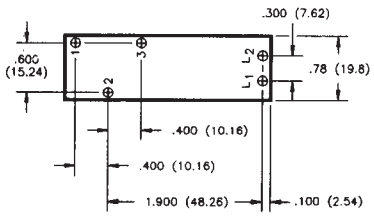

- SPDT version of K81
- Vacuum dielectric for power switching low current loads
- Flying lead version will carry 10 Amps continuous current
- PCB mount version will carry 5 Amps continuous current

Product Specifications

Contact Arrangement — SPDT

Contact Form — C

Test Voltage, DC or 60 Hz (Peak) — 11 kV

Rated Operating Voltage (Peak) — DC or 60 Hz — 10 kV

Continuous Carry Current, Max. — DC or 60 Hz — See Note 1
Coil Hi-Pot (Vrms, 60 Hz) — N/A

Contact Resistance, Max. — 0.05 ohm

Operate Time, Max. — 10 ms

Release Time, Max. — 10 ms

Shock, 11ms, 1/2 Sine (Peak) — 30 g

Vibration — Peak — 10 g (55 to 500 Hz)

Operating Ambient Temperature Range — -55°C to +85°C

Mechanical Life — 2 million cycles

Weight, Nominal — 70.87 g (2.5 oz.)

Note:
1. 5 Amp carry for PC pin versions. 30 Amp carry for flying lead versions.

Coil Data

Volts, Nominal DC	12 V	26.5 V	115 V
Pickup, Max.	8 Vdc	16 Vdc	80 Vdc

K43 Series Make & Break Load Switching — 10 kV Relays

K43A and K43B Product Facts for K43A and K43B

- 10 kV, 25 Amps continuous current relay
- RF ratings to 32 MHz
- Vacuum dielectric for power switching low current loads
- 2 million cycle mechanical life
- QPL versions available, M83725/17 & M83725/10

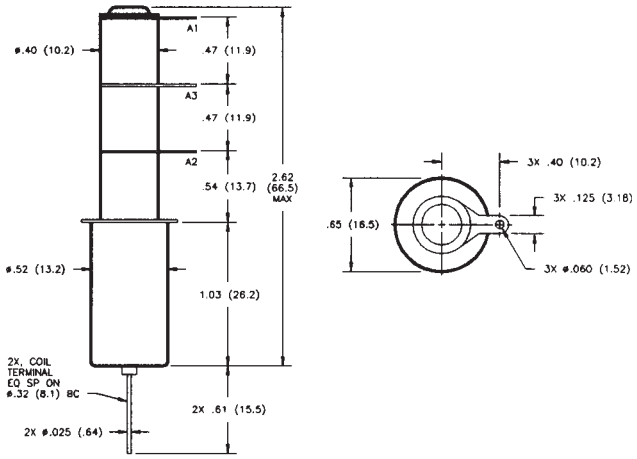

K43C Product Facts for K43C

- SPDT version of K43
- Vacuum dielectric for power switching low current loads
- Flange mounting available
- Carries 10 Amps at 32 MHz
- Meets requirements of MIL-R-83725
- QPL version available, M83725/16

For factory-direct application assistance, dial 800-253-4560, ext. 2055, or 805-220-2055.

KILOVAC K43P Make & Break Load Switching

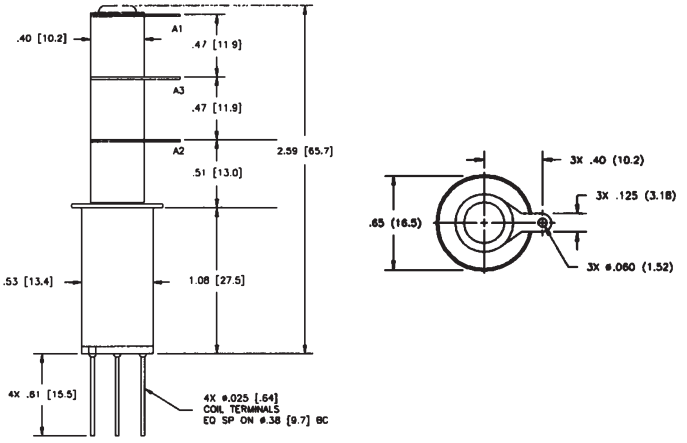

Product Facts for K43P

- High power rating; 24 Amps DC continuous current carry
- Vacuum dielectric for power switching low current loads
- Low power consumption
- Fast operating: 5 millisecond operate time
- Meets requirements of MIL-R-83725

KILOVAC K43R Make & Break Load Switching

Product Facts for K43R

- Single pole, double throw contacts with latching actuator
- Vacuum dielectric for power switching low current loads
- Carries 6 Amps at 32 MHz
- Meets requirements of MIL-R-83725

Product Specifications for K43P and K43R

H-14/16 Series Make & Break Load Switching — 12 kV Relays

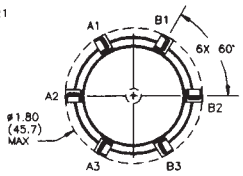

H-14

Product Facts for H-14

- Double pole, double throw contacts
- Vacuum dielectric for power switching low current loads
- 30 Amps DC continuous current rating
- Corona shield high voltage terminals available
- Meets requirements of MIL-R-83725

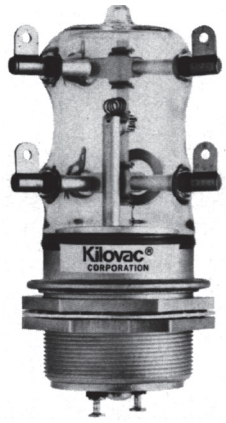

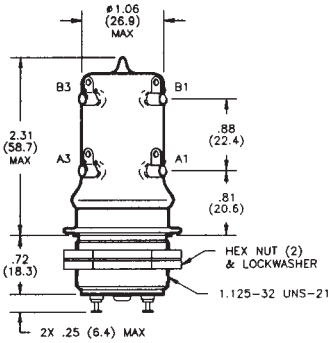

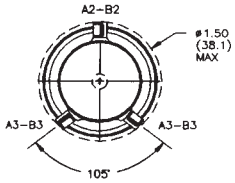

H-16

Product Facts for H-16

- 12 kV rating; isolates 5 kV at 32 MHz
- Vacuum dielectric for power switching low current loads
- Double pole, double throw contacts
- Widely used as a transmit/ receive switch
- Meets requirements of MIL-R-83725

Product Specifications for H-14 and H-16

Contact Arrangement — DPDT

Contact Form — 2C

Test Voltage, DC or 60 Hz (Peak) — 15 kV

KC Series Make & Break Load Switching — 15 kV Relays

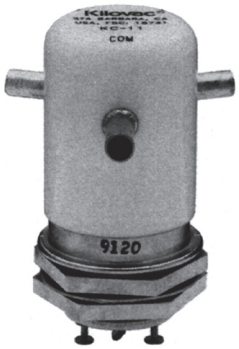

KC-14

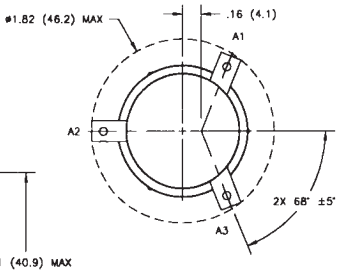

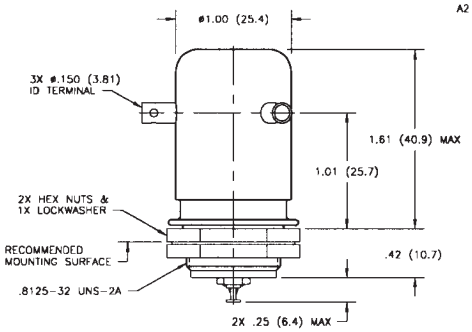

KC-18

Product Facts for KC-14 and KC-18

- Specifically designed for load switching applications
- Can power switch and isolate loads
- Replaces KILOVAC KC-8 and KC-12
- Meets requirements of MIL-R-83725

*Hot Switching, Resistive Load Life

Voltage	Current	Load Life Operations
330 Vdc	17 Amps	10,000
330 Vdc	5 Amps	100,000
5,000 Vdc	2 Amps	100,000
10,000 Vdc	1 Amps	50,000

*Ratings are for normally open contacts only. No testing has been performed on normally closed contacts.

Coil Data

Volts, Nominal DC	12 V	26.5 V	115 V
Pickup, Max.	8 Vdc	16 Vdc	80 Vdc
Dropout	.5-5 Vdc	1-10 Vdc	5-50 Vdc
Coil Resistance (±10%)	48 Ω	180 Ω	2900 Ω

Ratings listed are for 25°C, sea level conditions

Product Specifications for KC-14 and KC-18

Contact Arrangement — SPDT
Contact Form — C
Test Voltage, DC or 60 Hz (Peak) — 17 kV
Rated Operating Voltage (Peak) — DC or 60 Hz — 15 kV

H-19/17 Series Make & Break Load Switching — 20/25 kV Relays

H-19
Product Facts

- 20 kV operating voltage
- Vacuum dielectric and tungsten contacts for power switching low current loads
- Double pole, double throw contacts
- Available with corona shield connectors
- Meets requirements of MIL-R-83725

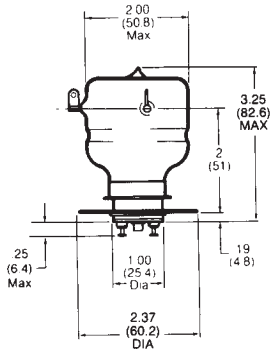

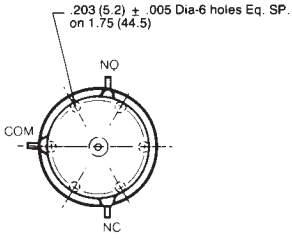

H-17
Product Facts

- Will isolate 12 kV at 32 MHz
- Tungsten contacts suitable for power switching low current loads
- Available with corona shield connectors
- Meets requirements of MIL-R-83725
- QPL version available, M83725/2

K62 Series Make & Break Load Switching — 25 kV Relays

K62A and K62B Product Facts

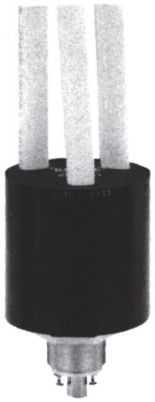

- 25 kV relay with flying leads for ease of installation
- Vacuum dielectric and tungsten contacts for power switching low current loads
- Meets requirements of MIL-R-83725

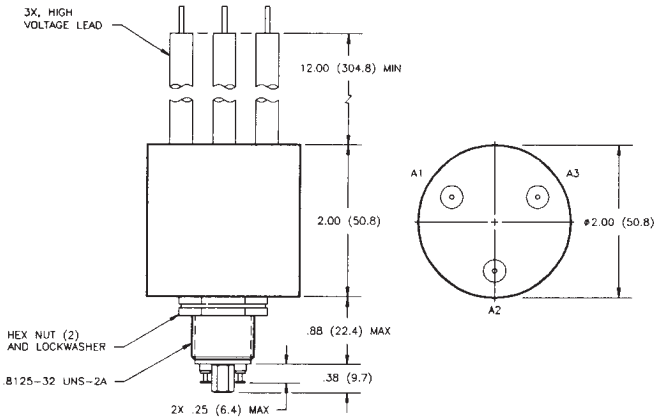

K62C Product Facts

- SPDT version of K62
- Vacuum dielectric for power switching low current loads
- Carries 18 Amps continuous current
- Meets requirements of MIL-R-83725

KC-Series No Load Switching — 25 kV Relays

KC-20
Product Facts

- Rugged, high current carry ceramic relay
- Carries 30 Amps at 32 MHz
- Copper contacts; not designed for power switching
- Meets requirements of MIL-R-83725

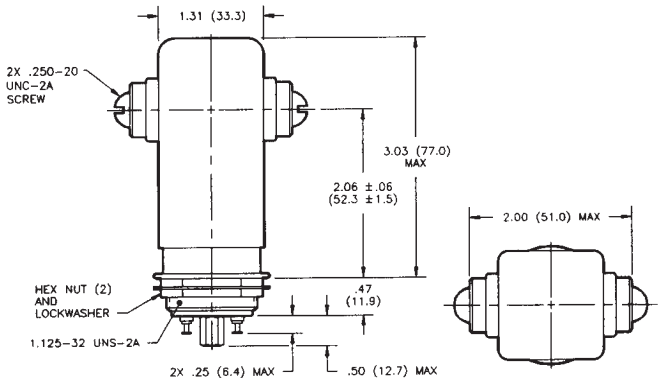

KC-30
Product Facts

- Normally closed version of KC-20
- Carries 55 Amps DC
- Vacuum dielectric for low leakage current applications

KP61 Series — 35 kV Relays

Product Facts

- SF-6 gas-filled relay is excellent for capacitive discharge applications
- Widely used in test equipment and medical instruments
- Fully operable in air and suitable for adverse environments
- Contact forms A, B & C
- 35 kV rating in compact, durable package
- Lower cost version of K61 series

K64 & H-25 Series — 50 kV Relays

K64C
Make Only Load Switching

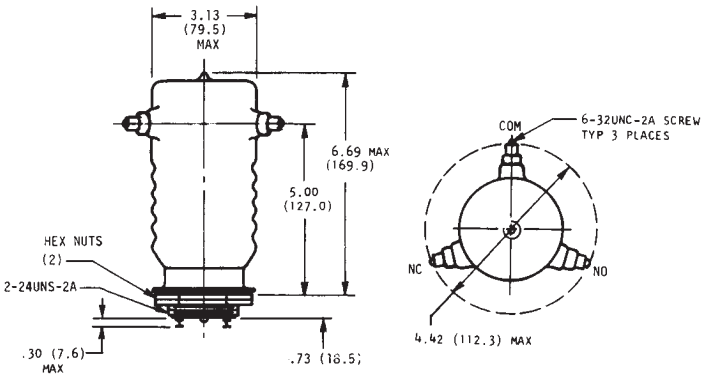

Product Facts for K64C

- SF-6 gas-filled relay ideal for high voltage isolation or "make only" power switching
- 50 kV rating in compact package
- High voltage leads and encapsulation allow full operation in air

H-25
Make & Break Load Switching

Product Facts for H-25

- Vacuum relay provides low contact resistance
- Vacuum dielectric for power switching low current loads

Product Specifications for K64C and H-25

Contact Arrangement — SPDT

Contact Form — C

8 = Flying Leads, 36”

Mounting:
1 = Threaded

Mounting Methods

KILOVAC "stacked ceramic" series relays can be easily mounted in any of the several ways shown below. The relay base should be mounted to a ground potential for high voltage applications. KILOVAC relays are not position sensitive and can be mounted in any orientation.

Optional Coil Turret Terminals for PD5, PD10; K41, K43 Types

For factory-direct application assistance, dial 800-253-4560, ext. 2055, or 805-220-2055.

Special Connectors

A number of KILOVAC relays are available with special, anti-corona high voltage connectors. Refer to the chart to determine if high voltage connectors are available for your model relay. These connectors can be ordered separately, by part number, or at the same time you order your relays (for "H: relays only) by simply adding the letter "C" to the part number. For instance, if you wish to purchase an H-8 relay with special connectors, you should order an "H-8C". If you already have an H-8, you can order three Part Number 0510 connectors and install them yourself by removing the standard solder lugs and carefully installing the connectors so as not to damage the glass-to-metal seals.

Optional High Voltage Connectors

Relay Model	Connector Part Number	
H-8 H-14 H-16 H-19 H-26	0510	
H-17 H-23 H-24	1886	
EV250-1A EV250-1B EV250-2A EV250-2B EV250-8A EV250-8B	2005

Application Notes for EV/LEV Contactors

Introduction - Product Capabilities and Typical Applications

TE KILOVAC EV and LEV contactors are designed to be the highest performance, smallest and lightest weight, sealed High Voltage contactors in the industry. With current carrying capability of up to 500A and power switching up to 200kW, they are used in a variety of industrial, marine, automotive, and commercial applications. Primarily designed to switch resistive loads,they can be used in a variety of circuit applications bearing in mind a few important considerations. This application note focuses on a few of the more common circuit configurations, and what to consider when selecting, installing and using the contactors.

1. Installation

EV/LEV contactors can be mounted in any orientation, and due to the nature of their hermetic seal and isolated enclosure, can be mounted in close proximity to other equipment. However, care must be taken with regard to the termination of the power cables to the main terminals. It is important that the main power connection lugs are mated directly to the terminal seats. Be sure that the hardware stackup is in the proper order, and that washers and other spacers are not placed between the lug and terminal seat. Extraneous connection resistance can cause considerable power dissipation and terminal heating at high current carry.

Refer to Figure 1 and Table I for the recommended hardware stackup and torque.

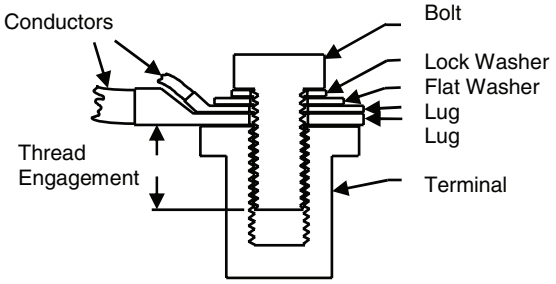

Figure 1
Main Terminal Hardware Installation

Table I

THREAD ENGAGEMENT(turns)	TORQUE
Less than 5	Use longer fastener
5 TO 7	7.9 Nm (70 in-lb) MAX
7 TO 8	9.0 Nm (80 in-lb) MAX
8 TO 11	9.0 Nm (80 in-lb) 11 Nm (100 in-lb) MAX
Mounting Feet (all)	1.7-3.3 Nm (30-35 in-lb)

Table I

Use the same guidelines and torque maximum values for stud terminal contactors as well.

2. Coils, Drive Circuits and Coil Economizing

Since the power required to close the contacts is generally much greater than the required holding power, many KILOVAC contactors can be packaged with low-profile coils that utilize either an electronic economizer (switchmode PWM), or mechanical cut-throat economizer. The economizer lets-through the higher power required for contact closure, then reduces the power for holding, greatly reducing the coil power consumption and heating. These circuits are packaged with the contactor, and in most cases include coil suppression components as well. For customers who wish to provide their own circuitry, TE can provide suggestions for driving the coils of all versions of contactors. Single coil, uneconomized products are also available in the LEV product line. These coils are designed to operate at nominal power over all specified voltage and temperature ranges withouteconomizing circuitry. DC Coils up to 400Vdc and AC coils with integrated converters are available up to 240Vac.

3. Load Types and Power Switching Recommendations

In general, all EV/LEV contactors are designed primarily for connection and interruption of resistive loads and slightly inductive loads (L/R<1ms). High currents (up to 2000A) can be interrupted in case of circuit faults, and high continuous currents upwards of 500A can be maintained through closed contacts. Some important points to consider are:

a. Closing into current spikes due to uncharged filter capacitors. Capacitors should be pre-charged whenever possible to avoid excessive contact erosion and nuisance welds. Keep inrush current spikes below 650A at all times. Care should also be taken when considering other high-inrush loads such as lamps or motors.

b. Large current spikes through closed contacts. Large current spikes through closed contacts in excess of 3000A can sometimes cause spot welding or contact levitation.

c. Circuit inductance. Contactor break-arcs generally last as long as it takes to dissipate the stored inductive energy of the load (t (arc) = 1.1*L/R).

Longer arcs due to circuit inductance can accelerate contact wear, and in extreme cases, can cause contactor failure. TE recommends that the time constant of the load be less than 1ms for safe operation and maximum life.

Contactor life is a function of the power level switched. Higher make/break currents erode contact materials faster and accelerate loss of dielectric withstanding between the open contacts. Figure 2 can be used as a guideline for estimating product life at a given load.

Application Notes for EV/LEV Contactors (Continued)

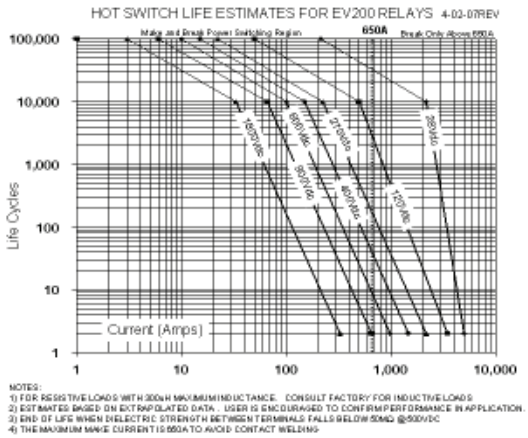

Figure 2
Life Cycles vs. Power Switched

4. Recommended Conductor Sizes for Continuous Current Carry

Many sources exist for recommending the proper conductor size for a given current carry. Many of these sources are concerned primarily with wire insulation safety issues. Cable bundling, conduit types, length of runs, etc., are all important considerations. With regard to a contactor placed in line with the conductors, it is important to make sure that the wire size is sufficient such that the contactor terminals themselves do not overheat, leading to a failure of the device. In most cases, the primary path for removal of heat from the contactor terminals is the conductors themselves. Convection to atmosphere and conduction via the base mountings play a lesser role in this type of contactor due to the nature of the construction. TE has performed basic characterization of many of the styles of contactors discussed herein, and the data is presented in Figure 3. The recommended maximum power terminal temperature for all EV/LEV contactors is 150° C continuous and 175° C for 1 hour.

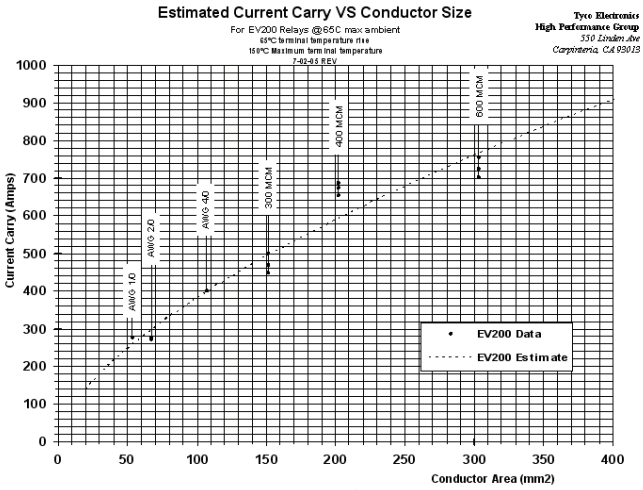

Figure 3
Recommended Conductor Sizes

For applications requiring larger conductors than can practically be installed with single 4/0 AWG cable and lugs, adapter buss extensions can be obtained from TE.

5. Auxiliary Circuits

Auxiliary contacts are available on most models. Configurations available are: SPST-NO, SPST-NC and SPDT. Auxiliary contacts are rated at 125Vac/ 1A or 30Vdc/3A. Contacts with gold plating for low level loads are also available. For circuit voltage below 10V/0.1A, gold contacts are recommended.

The auxiliary contact actuating method will indicate the true position of the main contacts. The auxiliary contact actuation is directly coupled to the main contact moving bridge, and will not indicate “open” unless both contact gaps of the double-make, Form X contact are fully disconnected. Keep in mind that the auxiliary contact is mainly a status indication, and should not be used to directly power other loads such as a relay coil or high power lamp load.

6. Environmental Considerations

All KILOVAC contactors are characterized for operation in thermal, vibration, moisture and fluid environments. Consult the appropriate data sheet for limits concerning shock, vibration, temperature range and altitude limits. In some cases, there may be variations in limits with regard to “specified operation” or “survival only”.

7. Custom Configurations

Most parts can be ordered with a variety of combinations of main terminal and coil configurations, auxiliary contacts, interface connectors, coil voltages, etc. If you have a requirement for a particular configuration not shown on the data sheet, consult the factory for information regarding custom configurations.

8. Summary

This Application Note is meant to address some of the more common questions regarding the use of EV/LEV contactors. In all cases, please refer to the applicable product data sheet for specific information. Also, Product Application Engineers are available to answer questions regarding these products by calling 800-253-4560 x2055, or 805-220-2055.

Application Notes for MAP/CAP Contactors

Introduction - Product Capabilities And Typical Applications

TE KILOVAC MAP/CAP contactors are designed to be the highest performance, smallest and lightest weight, sealed High Voltage contactors in the industry. With current carrying capability of up to 500A and power switching up to 200kW, they are used in a variety of commercial aerospace and military applications. Primarily designed to switch resistive loads, they can be used in a variety of circuit applications bearing in mind a few important considerations. This application note focuses on a few of the more common circuit configurations, and what to consider when selecting, installing and using the contactors.

1. Installation

TE KILOVAC MAP/CAP contactors can be mounted in any orientation, and due to the nature of their hermetic seal and isolated enclosure, can be mounted in close proximity to other equipment. However, care must be taken with regard to the termination of the power cables to the main terminals. It is important that the main power connection lugs are mated directly to the terminal seats. Be sure that the hardware stackup is in the proper order, and that washers and other spacers are not placed between the lug and terminal seat. Extraneous connection resistance can cause considerable power dissipation and terminal heating at high current carry. Refer to Figure 1 and Table I for the recommended hardware stackup and torque.

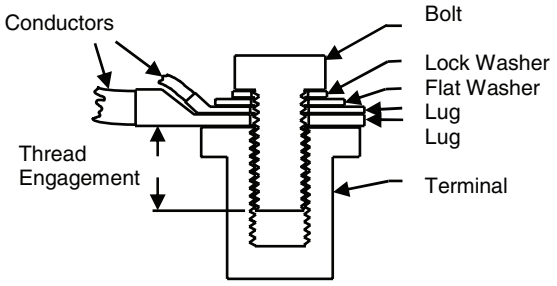

Figure 1

7 TO 8	9.0 Nm (80 in-lb) MAX
8 TO 11	9.0 Nm (80 in-lb) 11 Nm (100 in-lb) MAX
Mounting Feet (all)	1.7-3.3 Nm (30-35 in-lb)

Table I

Use the same guidelines and torque maximum values for stud terminal contactors as well.

2. Coils, Drive Circuits and Coil Economizing

Since the power required to close the contacts is generally much greater than the required holding power, many contactors can be packaged with low-profile coils that utilize either an electronic economizer (switchmode PWM, electronic cut-throat), or mechanical cutthroat economizer. The economizer lets-through the higher power required for contact closure, then reduces the power for holding, greatly reducing the coil power consumption and heating. These circuits are packaged with the contactor, and in most cases include coil suppression components as well. For customers who wish to provide their own circuitry, TE can provide suggestions for driving the coils of all versions of contactors. Four types of actuators are typically used:

a. Single Coil requiring customer economizer circuit

b. Single Coil with supplied electronic economizer

c. Dual Coil with supplied mechanical “cut-throat” economizer

d. Dual Coil with supplied electrical “cut-throat” economizer

The advantages of each type of coil circuit are shown in Table II.

Type	Advantage
Electronic PWM	Operates over widest voltage range
Electronic CT	Simple, Robust, EMC Compliant
Mechanical CT	Simple, robust, fastest operate time
Single Coil - (customer economized)	Flexibility, lower initial cost

Table II
Coil Configurations

3. Load Types and Power Switching Recommendations

In general, all MAP/CAP contactors are designed primarily for connection and interruption of resistive loads and slightly inductive loads (L/R<1ms). High currents (up to 2000A) can be interrupted in case of circuit faults, and high continuous currents upwards of 500A can be maintained through closed contacts. Some important pints to consider are:

a. Closing into current spikes due to uncharged filter capacitors. Capacitors should be pre-charged whenever possible to avoid excessive contact erosion and nuisance welds. Keep inrush current spikes below 650A at all times. Care should also be taken when considering other high-inrush loads such as lamps or motors.

Application Notes for MAP/CAP Contactors (Continued)

b. Large current spikes through closed contacts. Large current spikes through closed contacts in excess of 3000A can sometimes cause spot welding or contact levitation. Consult with the factory if your application requires passing large current pulses. Many contactors can be ordered with “Dual Contact” arrangements (Arcing contacts of harder material in parallel with high current carry material).

c. Circuit inductance. Contactor break-arcs generally last as long as it takes to dissipate the stored inductive energy of the load (t (arc) = 1.1*L/R).

Longer arcs due to circuit inductance can accelerate contact wear, and in extreme cases, can cause contactor failure. TE recommends that the time constant of the load be less than 1ms for safe operation and maximum life.

Contactor life is a function of the power level switched. Higher make/break currents erode contact materials faster and accelerate loss of dielectric withstanding between the open contacts. Figure 2 can be used as a guideline for estimating product life at a given load.

Application Notes on Coil Power Economizing using PWM Circuits

Introduction - Reducing Coil Power Dissipation through the use of PWM Circuits

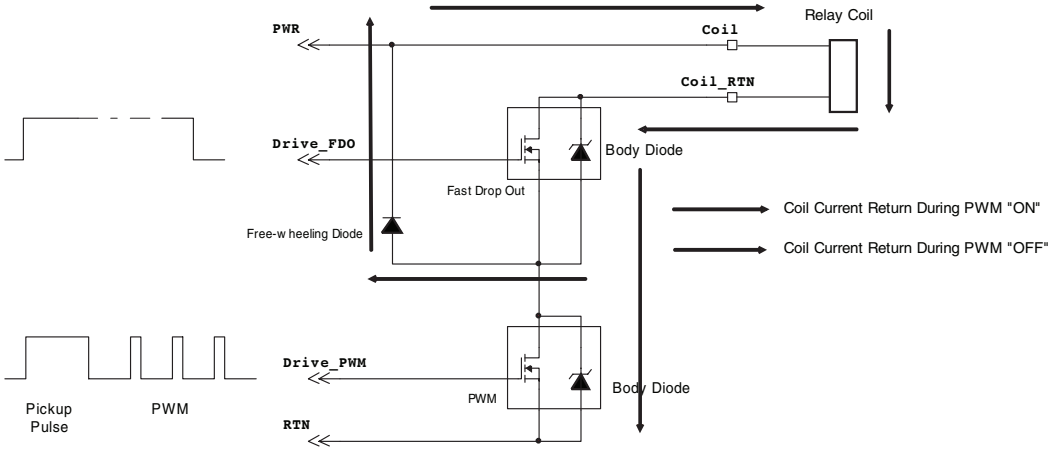

The coil power of most TE KILOVAC Relays and Contactors can be reduced after Pickup by using several economizing schemes. One of the most popular methods used in many of our standard products, and one that is suitable for implementation by customers, is the Pulse Width Modulated (PWM) coil driver.

1. Typical PWM Coil Drive Circuit

Figure 1 shows a typical PWM coil drive/economizer circuit.

In the circuit shown, the "Fast Dropout" (FDO) and PWM driver are energized simultaneously for a sufficient time to allow the contacts to fully close. The PWM driver is then modulated such that the stored coil energy is utilized during the PWM driver "OFF" time to circulate holding current through the FDO driver and freewheeling diode. Since the holding current is much lower than the current required for pickup, the holding power for the contacts is greatly reduced.

The Fast Dropout circuit allows for the switching in/out of the "free-wheeling" diode. When power is removed, the FDO and PWM drivers will turn off, causing the stored energy of the coil to be rapidly dissipated in the body diodes. This minimizes the decay time of the coil current and facilitates a fast opening of the relay contacts.

Fast Drop-out FET stays on during operation. FDO and Power can be applied simultaneously

Filtering/Protection should be applied to FET gates as required.

For higher energy coils, additional TVS protection may be required across FET drain-to-source.

Figure 1
Coil Drive Circuit

Application Notes on Coil Power Economizing using PWM Circuits (Continued)

This fast opening is useful for circuit interruption, and it allows the over travel mechanism of the contact actuator to work effectively in breaking minor contact welds that may occur when closing the contacts.

Allowing the free-wheeling diode to remain across the coil would significantly increase the contact opening time and opening speed, and possibly result in nuisance contact welds and/or reduced capability to interrupt circuit currents.

If additional diodes are required to protect the FET body diodes, select a Transient Voltage Suppressor (TVS) diode with a breakdown rating lower than that of the driver FET body diode. In general, a higher voltage TVS diode will result in faster contact opening and higher clamping voltage, while a lower voltage TVS diode will result in slower contact opening and lower clamping voltage. For more detailed information regarding TVS diode selection, contact TE and request the report titled DC Relay Magnetic Energy Determination and Transient Voltage suppressor Diode Selection.

1.1 Recommended Operating Frequency and Duty Cycle

The frequency at which the PWM circuit is operated should be high enough such that the oscillation of the coil current does not lead to audible noise being generated by the magnetic components and coil winding. For most KILOVAC contactors, a coil drive frequency > 15 kHz is usually sufficient to ensure that nuisance audible noise is not generated. The PWM duty cycle required for economizing power while maintaining sufficient holding force can be calculated from the required holding current as follows:

$$\text{Duty Cycle}(\%) = (I_{hold} * R(T)\text{Coil}/V_{source}) * 100 \quad (1)$$

Where:
R(T) = Coil Resistance at Temperature
I_{hold} = Required Holding Current
V_{source} = Source Voltage

Contact TE regarding the minimum required hold current needed for a particular Part Number. In general, divide the specified dropout voltage by the coil resistance at 20°C, and add 25% above that to get an estimate of the value to use in equation (1) for I_{hold}.

2.0 Summary

This Application Note is meant to address some of the more common questions regarding the use of PWM circuits for coil power economization. In all cases, please refer to the applicable product data sheet for specific information.

TE can also recommend alternative solutions for mechanical dual-coil economizers, as well as “Electronic Cut-Throat” economizers. Product Application Engineers are available to answer questions regarding this subject by calling 800-253-4560 x2055, or 805-220-2055.

1600/1700 Series Delay On Operate Timers

Product Facts

- **AC/DC input delay on operate timer offered in fixed (1600) and adjustable (1700) types**
- **Up to 10A loads**
- **CMOS digital design**
- **Hermetic package**
- **Built to MIL-R-83726 environmentals**
- **Many customizing options**
  - **Extended timing ranges**
  - **Tighter timing tolerances**
  - **Header and mounting**

KILOVAC 1600/1700 series delay on operate timers combine solid state timing circuits with electromechanical output relays in robust hermetically sealed enclosures. The 1600 types are fixed timers, while the 1700 models are adjustable via an external resistor. Numerous output options include 4A rated contacts in 1-4 form C (SPDT - 4PDT) arrangements and 10A rated contacts in 1-2 form C (SPDT-DPDT) arrangements.

Electrical Specifications

Timing Range —
1600 series (fixed) — 50 ms to 600 s
1700 series (adjustable) — 50 ms to 240 s

Tolerance — ±10% or 10 ms, whichever is greater

Recycle Time — 10 ms (DC input), 50ms (AC input)

Recovery Time — 10 ms (DC input), 50ms (AC input)

Input Voltage — 18 to 31Vdc, 105 to 125Vac, 400 Hz

Current Drain (at 25°C, 28Vdc) —
DC Coil, 10A contacts —
1- and 2-pole — 135mA maximum

AC or DC Coil, 4A contacts —
1-pole — 100mA maximum
2-pole — 150mA maximum
3- and 4-pole — 200mA maximum

Contact Ratings —
DC Coil, 10A contacts —
10A resistive @ 30Vdc
5A inductive @ 30Vdc
5A resistive @ 115 Vrms, 400 Hz
3A inductive @ 115 Vrms, 400 Hz

AC or DC Coil, 4A contacts —
4A resistive @ 30Vdc
1A inductive @ 30Vdc
2A resistive @ 115 Vrms, 400 Hz
1A inductive @ 115 Vrms, 400 Hz

Environmental Specifications

Temperature Range —
-55°C to +85°C or -55°C to +125°C

Vibration — 20 G's, 10 - 2,000 Hz

Shock — 50 G's, 11 ± 1ms duration

Insulation Resistance — 1,000 megohms, min., at 500Vdc, all terminals to case

Dielectric Strength — 1,000Vrms, 60 Hz., at sea level, all terminals to case

Sealing — Hermetic, 1.3 in. (33.0mm) of mercury

Life — 100,000 operations, min.

Weight —
4A units — 4.5 oz (127.6g) max.
10A units — 8.5 oz (240g) max.

Specifications by Model Number – 4 Amp Contact Versions

Fixed Timer Model Number	Adjustable Timer Model Number	Input Voltage	Temperature Range	Housing Length (Dim. "A")	Contact Arrangement
1601	1701	DC	-55°C to +85°C	1.656 [42.06]	1 Form C (SPDT)

Specifications by Model Number – 10 Amp Contact Versions

Fixed Timer Model Number	Adjustable Timer Model Number	Input Voltage	Temperature Range	Housing Length (Dim. "A")	Contact Arrangement
1610	1710	DC	-55°C to +85°C	2.419 [61.44]	1 Form C (SPDT)
1620	1720	DC	-55°C to +85°C	2.419 [61.44]	2 Form C (DPDT)

Adjustable Timing Formula (1700 types)

The resistance required to obtain timing within this range is determined by using the formula:

Rx = 400K (T/Tmax.) – 40K, where

Rx = External Resistance in Ohms,
T = Desired Time in Seconds, and
Tmax. = Maximum Time (Code).

A high quality deposited carbon ±1%, 0.1W (min.) resistor is recommended for external resistance.

Part Numbering System

Typical Part Number	1722	–C	– 1102

Model Number:
Four digit code from table above.

Mounting (see outline dimension drawings):
A = Studs on bottom B = Studs on top C = Studs on side

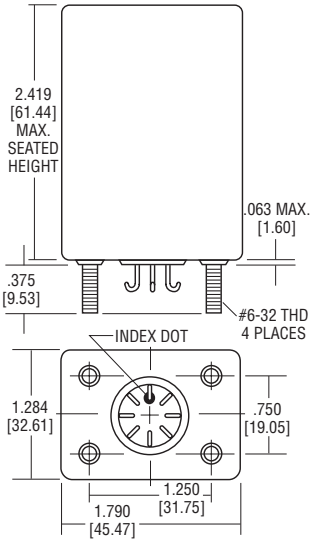

Timing Code:
Four-digit code for any value between 50ms.

A typical part number for an adjustable timer would be 1722–C–1102. This is a DC unit in the -55°C to +125°C temperature range with a 2 form C (DPDT) contact arrangement in a style "C" mounting, with a maximum time delay of 11s.

2400 Series Delay On Operate Timer, Fixed Timing, Relay Output

Product Facts

- **DC input fixed delay on operate timer**
- **2 Form C (DPDT), 2A output**
- **CMOS digital design**
- **Reverse polarity protection**
- **Hermetic package**
- **Built to MIL-R-83726 environmentals**
- **Customizing options include**
  - **Tighter timing tolerances**
  - **Header and mounting**
  - **Different input voltages**

KILOVAC 2400 series delay on operate timers combine solid state timing circuits with relay outputs in robust hermetically sealed enclosures. They are fixed timers. The 2 Form C (DPDT) output relay is rated 2A.

Electrical Specifications

Timing Range — 50 ms to 600 s

Tolerance — ±10% or 10 ms, whichever is greater

Recycle Time — 10 ms

Recovery Time — 20 ms

Input Data —

Input Voltage — 18 to 31Vdc

Current Drain — 85mA @ 31Vdc, 25°C

Output Data —

Output Form — 2 Form C (DPDT).

Output Rating —
2A resistive at 30Vdc;
125mA resistive at 115Vac, 400 Hz

Transient Protection — 80Vdc for 50ms

Environmental Specifications

Temperature Range —
-55°C to +85°C or -55°C to +125°C

Vibration — 20 G's, 10 - 2,000 Hz

Shock — 50 G's, 11 ± 1ms duration

Insulation Resistance — 1,000 megohms, min., at 500Vdc, all terminals to case

Dielectric Strength — 500Vrms, 60 Hz., at sea level, all terminals to case

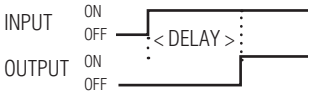

Sealing — Hermetic, 1.3 in. (33.0mm) of mercury

Life — 100,000 operations, min.

Weight — 1.2 oz (30g) max.

Plug-in sockets are available for header option 2

Timing Diagram

Part Numbering System

Typical Part Number	2401	–1	A	– 1102

Model Number:
2401 = Fixed timer, -55°C to +85°C
2402 = Fixed timer, -55°C to +125°C

Header Style (see Header Options drawings):
1 = Hook terminals 2 = Straight terminals, short
3 = Straight terminals, long

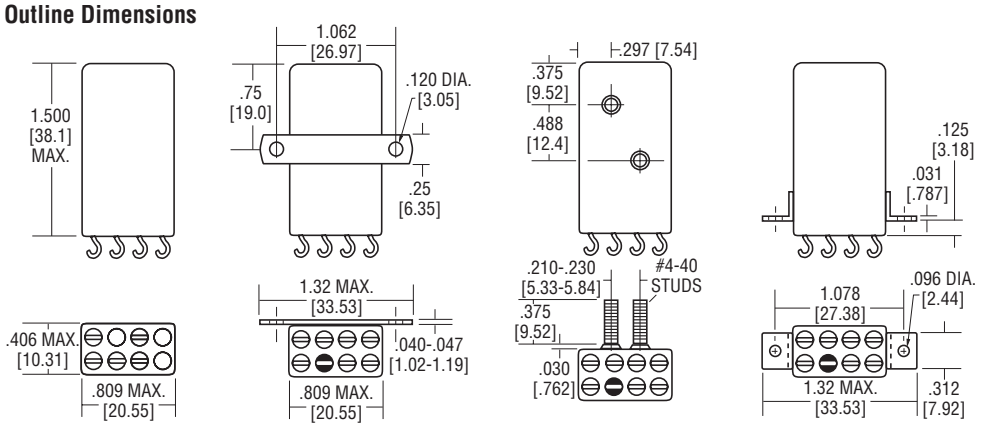

Mounting (see outline dimension drawings):
A = Plain case B = Bracket B D = Studs on side E = Bracket E

Timing Code:
Four-digit code for any value between 50ms and 600s.

The timing code consists of four digits and gives the time in ms. The first three digits are the significant figures and the last digit is the number of zeros following the significant figures; thus 50 ms would be coded 0500, 1.1 s would read 1101, and 1 m (60 s) would be 6002.

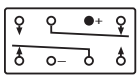

A typical part number would be 2401–1A–1102. This fixed timer operates at -55°C to +85°C, has hook terminals, style "A" mounting, and a time delay of 11s.

5600/5700 Series Delay On Release Timers

Product Facts

- DC input delay on release timer offered in fixed (5600) and adjustable (5700) types
- Up to 10A loads
- Reverse polarity protection
- CMOS digital design
- Built to MIL-R-83726 environmentals
- Many customizing options
  - Extended timing ranges
  - Tighter timing tolerances
  - Header and mounting
  - Different Aux. voltages
  - Different control line voltages
  - Input either 115Vac, 60 Hz

KILOVAC 5600/6700 series delay on release timers combine solid state timing circuits with electromechanical output relays in robust hermetically sealed enclosures. The 5600 types are fixed timers, while the 5700 models are adjustable via an external resistor. Numerous output options include 2A, 5A and 10A rated contacts in 1, and 2 form C (SPDT and DPDT) arrangements.

Electrical Specifications

Timing Range —
5600 series (fixed) — 50 ms to 600 s
5700 series (adjustable) — 50 ms to 240 s

Tolerance — ±10% or ±15ms, whichever is less

Recycle Time — 10 ms

Reset Time — 20 ms

Operate Time (Max.) — 10 ms (2A and 5A models), 20ms (10A models)

Input Voltage — 18 to 31Vdc

Control Voltage — 10 to 31Vdc. Ground common to aux. power line. 10Vdc minimum must be applied for a minimum duration of 20ms to energize output and initiate the timing circuit.

Current Drain (at 25°C, 28Vdc) —
Control Line — 15mA typ., 25mA max.
Input Line De-energized (after completion of delay period) — 125 mA
Input Line Energized —
1-pole, 2 & 5A models — 100mA
1-pole, 10A models — 150mA
2-pole, 2 & 5A models — 150mA
2-pole,10A models — 240mA

Contact Ratings —
10A contacts —
10A resistive @ 30Vdc
5A inductive @ 30Vdc
5A resistive @ 115 Vrms, 400 Hz
3A inductive @ 115 Vrms, 400 Hz

5A contacts —
5A resistive @ 30Vdc
1.5A inductive @ 30Vdc
3A resistive @ 115 Vrms, 400 Hz
1A inductive @ 115 Vrms, 400 Hz

2A contacts —
2A resistive @ 30Vdc
1A inductive @ 30Vdc
1A resistive @ 115 Vrms, 400 Hz
0.3A inductive @ 115 Vrms, 400 Hz

Specifications by Model Number

Fixed Timer Model Number	Adjustable Timer Model Number	Input Voltage	Temperature Range	Contact Rating	Contact Arrangement	Available Enclosures
5601 5602	5701 5702	DC DC	-55°C to +85°C -55°C to +85°C	2 Amp 2 Amp	1 Form C (SPDT) 2 Form C (DPDT)	A - C - D - E A - C - D - E
5605 5606	5705 5706	DC DC	-55°C to +85°C -55°C to +85°C	5 Amp 5 Amp	1 Form C (SPDT) 2 Form C (DPDT)	D - E D - E

See next page for complete ordering information and outline dimensions for the available enclosures.

Environmental Specifications

Temperature Range —
-55°C to +85°C or -55°C to +125°C

Vibration — 20 G's, 10 - 2,000 Hz

Shock — 50 G's, 11 ± 1ms duration

Insulation Resistance —
1,000 megohms, min., at 500Vdc

Dielectric Strength — 1,000Vrms, 60 Hz., at sea level, all terminals to case

Sealing — Hermetic, 1.3 in. (33.0mm) of mercury

Life — 100,000 operations, min. (2A and 5A models); 50,000 operations, min. (10A models)

Weight — 8.5 oz (240g) max.

Adjustable Timing Formula (4700 types)

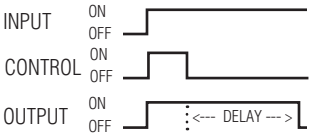

The resistance required to obtain timing within this range is determined by using the formula:

Rx = 400K (T/Tmax.) – 40K, where

Rx = External Resistance in Ohms,
T - Desired Time in Seconds, and
Tmax. = Maximum Time (Code).

A high quality deposited carbon ±1%, 0.1W (min.) resistor is recommended for external resistance.

Timing Diagram

Apply input power. Upon application of control power, the output will energize. Remove control power and initiate delay period.

Special Notes

10Vdc minimum must be applied for a minimum duration of 20ms to energize output and initiate timing.

Units rated 10A have a minimum time delay of 100ms.

5600/5700 Series Delay On Release Timers (Continued)

Part Numbering System

Typical Part Number	5722	–C	– 1102

Model Number:
Four digit code from table on the previous page.

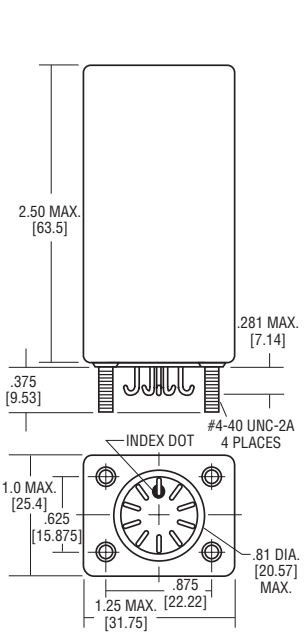

Mounting (see outline dimension drawings):
A = Studs on bottom of 2.5 in tall case
C = Studs on side of 2.5 in. tall case
D = Studs on bottom of 1.812 in. tall case
E = Bracket on side of 1.812 in. tall case

Timing Code:
Four-digit code for any value between 50ms.

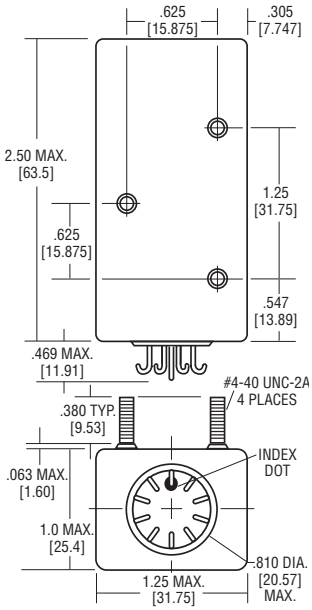

Note: Units with 10A contacts have a minimum time delay of 100ms.

A typical part number for an adjustable timer would be 5722–C–1102. This DC unit is in the -55°C to +125°C temperature range with a 2 amp contacts in a 2 form C (DPDT) arrangement, enclosed in case with a style "C" mounting, with a maximum time delay of 11s.

Electrical Specifications

Timing Range —
1800 series (fixed) — 50 ms to 600 s
1900 series (adjustable) — 50 ms to 240 s

Tolerance — ±10% or 10 ms, whichever is greater

Repeatability — ±0.1%

Recycle Time — 10 ms

Recovery Time — 20 ms

Input Data —

Input Voltage — 18 to 31Vdc

Current Drain (at 25°C, 28Vdc) — 10mA, plus load current

Output Data —

Output Form — 1 Form A (SPST-NO) solid state switch closure to ground

Output Rating — 300mA @ 25°C, 100mA @ 125°C

Minimum Load — 10mA

Saturation Voltage — 2.5Vdc, max.

Leakage — 1µA @ 25°C, 10µA @ 125°C

Environmental Specifications

Temperature Range —
-55°C to +85°C or -55°C to +125°C

Vibration — 20 G's, 10 - 2,000 Hz

Shock — 50 G's, 11 ± 1ms duration

Insulation Resistance — 1,000 megohms, min., at 500Vdc, all terminals to case

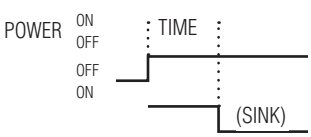

Dielectric Strength — 500Vrms, 60 Hz., at sea level, all terminals to case

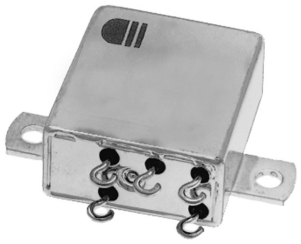

Sealing — Hermetic, 1.3 in. (33.0mm) of mercury

Life — 100,000 operations, min.

Weight — 1 oz (28.3g) max

Timing Diagram

KILOVAC 1800/1900 series delay on operate timer modules combine solid state timing circuits with solid state switch outputs in robust hermetically sealed enclosures. The 1800 types are fixed timers, while the 1900 models are adjustable via an external resistor. The 1 Form A (SPST-NO) switch is rated 300mA.

Adjustable Timing Formula (1900 types)

The resistance required to obtain timing within this range is determined by using the formula:

Rx = 400K (T/Tmax.) – 40K, where

Rx = External Resistance in Ohms,
T - Desired Time in Seconds, and
Tmax. = Maximum Time (Code).

A high quality deposited carbon ±1%, 0.1W (min.) resistor is recommended for external resistance.

Part Numbering System

Typical Part Number	1811	–1	A	– 1002

Model Number:
1811 = Fixed timer, -55°C to +85°C
1821 = Fixed timer, -55°C to +125°C
1911 = Adjustable timer, -55°C to +85°C
1921 = Adjustable timer, -55°C to +125°C

Header Style (see Header Options drawings):
1 = Hook terminals 2 = Straight terminals

Mounting (see outline dimension drawings):
A = Plain case B = Bracket B C = Studs on side E = Bracket E

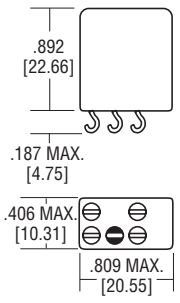

Timing Code:
Four-digit code for any value between 50ms and 600s for fixed (1800) timers, and 50ms and 240s for adjustable (1900) timers.

The timing code consists of four digits and gives the time in ms. The first three digits are the significant figures and the last digit is the number of zeros following the significant figures; thus 50 ms would be coded 0500, 1.1 s would read 1101, and 1 m (60 s) would be 6002.

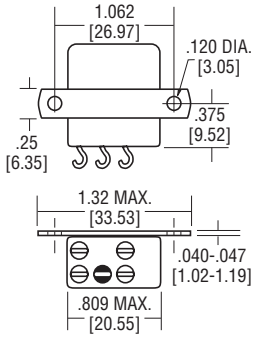

Adjustable timers cover one decade, e.g., 62 ms to 620 ms. The upper decade limit is Tmax. in the timing formula and is the the value defined by the timing code in the part number.

A typical part number would be 1811–1A–1002. This fixed timing module operates at -55°C to +85°C, has hook terminals, style "A" mounting, and a time delay of 10s.

6001 Series Delay On Operate Digital Timing Module

Product Facts

- Fixed delay on operate timer
- 300mA output
- CMOS digital design
- Voltage surge protection
- Qualified to MIL-R-83726/13

Electrical Specifications

Timing Range — 50 ms to 600 s.

Timing Accuracy — ±10% of nominal timing under all conditions of input voltage and environmental extremes

Recycle Characteristics —

Before Time Out — A power interruption occurring after the start but before completion of the timing cycle shall be for a duration of 0.5% of the nominal time delay or 10ms, whichever is greater, to ensure a loss in timing of no greater than 10%

After Time Out — A power interruption of 0.5% of the nominal time delay or 10ms, whichever is greater, will initiate a new timing cycle with a loss in timing of no greater than 5%

Input Data —

Input Voltage — 28Vdc, nominal; range 18 to 31Vdc

Current Drain (at 25°C, 28Vdc) — 10mA (max.), plus load current

Reverse Polarity Protection — The timer will not be damaged or operate when input voltage polarity is reversed

Output Data —

Configuration — 1 Form A (SPST-NO) solid state switch closure to ground

Load Ratings —

Resistive — 300mA @ +25°C, derated to 100mA @ +125°C

Inductive — Three MIL-R-5757/9 relays (any relay with 26.5Vdc coil)

Lamp Load — Two MS25237-327 lamps per MIL-L-6363

Load Suppression — Suppression for inductive loads for output protection is provided within the unit

Voltage Drop — 2.5Vdc, max. @ -55°C and +25°C; 2.0 Vdc, max., @ +125°C

Leakage Current — 1µA, max. @ +25°C, 10µA, max. @ +125°C

Insulation Resistance — 1,000 megohms, min., @ 500Vdc, measured between all terminals tied together to the case

Dielectric Strength — 500Vrms, 60 Hz., at sea level, measured between all terminals tied together to the case

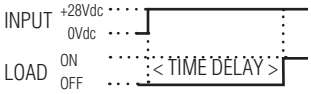

Transients —

Voltage Surge — Per MIL-STD-704A, figure 9, limit 1, for category B equipment

Self-generated Spikes — ±10V

KILOVAC 6001 series delay on operate timer modules are miniature devices combining solid state timing circuits with solid state switch outputs in robust hermetically sealed DIP enclosures. The 1 Form A (SPST-NO) switch is rated 300mA.

Timing Diagram

Environmental Specifications

Temperature Range — -55°C to +125°C

Altitude — 80,000 ft.

Shock — 150 G's, 11 ± 1ms half-sine wave

Vibration (sinusoidal) — 10 -80 Hz. at 0.06 inch DA; 80 - 3,000 Hz. at 20 G's

Sealing — MIL-STD-202, method 112, condition C

Materials:
Cover — Nickel
Header — Kovar® Alloy
Pins — Kovar® Alloy, gold plated

Marking — Per MIL-R-83726

Weight — 0.42 oz (12g) max.

KOVAR is a trademark of Carpenter Technology Corporation.

Part Numbering System

Typical Part Number	6001	–6002	C

Model Number:
6001 = Fixed timer, -55°C to +125°C

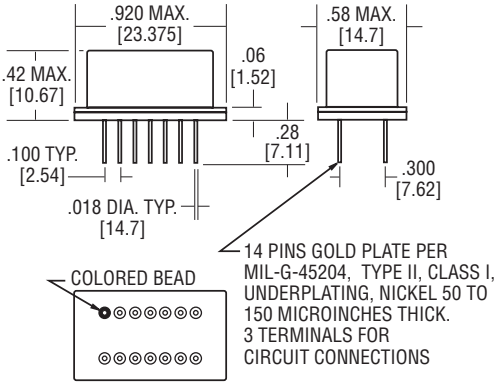

Timing Code:
Four-digit code for any value between 50ms and 600s.

The timing code consists of four digits and gives the time in ms. The first three digits are the significant figures and the last digit is the number of zeros following the significant figures; thus 50 ms would be coded 0500, 1.1 s would read 1101, and 1 m (60 s) would be 6002.

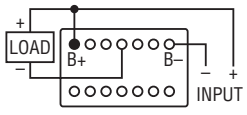

Optional Suffix:
C = Commercial version equivalent to M83726/13.

A typical part number would be 6001–6002C. This solid state output timing module has a time delay of 60s at 28Vdc and is the commercial equivalent to M83726/13.

Outline Dimensions

Wiring Diagram

PIN 10 IS ACTIVE. DO NOT CONNECT.

Special Notes:

- Load is connected between B+ and terminal designated. Delay begins upon application of power to terminals (B+ and B–).
- Always consult latest military specification for changes and additional information.

2600 Series Flasher/Repeat-Cycle, Timer-Fixed, Solid State Output

Product Facts

- **All solid-state**
- **Digital timing**
- **Reverse polarity protection**
- **Transient/surge protection**

Electrical Specifications

Timing Range —
"On Time" (.05 to 600 SEC)
"Off Time" (.05 to 600 SEC)

Duty Cycle — D.C. = $\frac{\text{T on}}{\text{T on \& T off}}$

Frequency — f = $\frac{1}{\text{T on \& T off}}$
(Flash rate)

Tolerance — ±10%

Repeatability — ±0.1%

Input Data —
Input Voltage — 18 to 31 V dc
Current Drain — 30 ma @ 28 V dc

Output Data —
Output — 28 V dc
Vin (dc) — 1.5 V dc @ 100 ma
Load — 30 ma max.

Environmental Specifications

Operature Temperature —
-55°C to +125°C

Vibration — 20 G's, 10 - 2,000 Hz

Shock — 50 G's, 11 ± 1 milliseconds duration

Insulation Resistance — 1,000 megohms at 500 Vdc

Dielectric Strength — 1,000 Vms, 60 Hz, at sea level. All terminals tied together to case.

Sealing — Hermetic, 1.3 in. (33.0mm) mercury

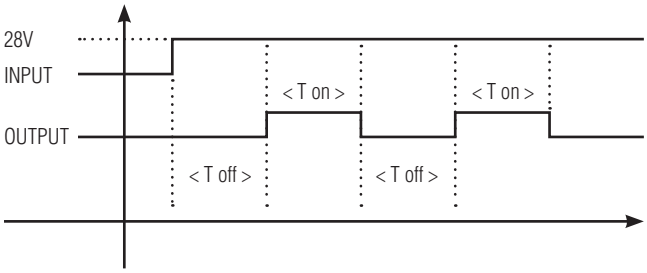

Life — over 1,000,000 operations

Weight — 8 oz. (200g) max.

Applications

The Hi-G Series 2600 Flasher can be used wherever warning or indicating lights, navigation or position lights, panel or control lights must be operated with a maximum of reliability in severe environments. The Series 2600 can also be used to interrupt Tone Generations or other Signaling Devices at a predetermined frequency.

- Higher output rating
- Output sink to ground
- Control line
- AC Operation
- Adj. "on" and "off" time
- Relay output to 10 amps
- Alternate packaging
- Initial cycle "on"
- Extended timing ranges

How to Order

Series	Initial Timing Cycle
2601	Off
2602	On

The part number consists of four elements. The series number, a letter signifying mounting style and the timing code numbers. The first timing is the "ON" time and the second is "OFF" time. The timing code number consists of four digits and gives the time in milliseconds. The first three digits are the significant figures and the last digit is the number of zeros following the significant figures, thus, 50 milliseconds would be coded 0500. 1.1 seconds would read 1101, and 1 minute (60 seconds) would be 6002.

Example: HI-G Part Number

2601 — A — 2001 — 1001

- 1001 — "OFF" time in milliseconds
- 2001 — "ON" time in milliseconds
- A — Mounting style
- 2601 — Series

4600/4700 Series Interval Timers

Product Facts

- **AC/DC input interval timer offered in fixed (4600) and adjustable (4700) types**
- **Up to 10A loads**
- **Reverse polarity protection**
- **Hermetic package**
- **Built to MIL-R-83726 environmentals**
- **Many customizing options**
  - **Extended timing ranges**
  - **Tighter timing tolerances**
  - **Header and mounting**
  - **115Vac, 60 Hz. input types**

Electrical Specifications

Timing Range —
4600 series (fixed) — 100 ms to 600 s
4700 series (adjustable) — 100 ms to 240 s

Tolerance — ±10%

Recycle Time — 10 ms (DC input), 50ms (AC input)

Operate Time (Max.) — 10 ms (4A models), 20ms (10A models)

Input Voltage — 18 to 31Vdc, 105 to 125Vac, 400 Hz

Current Drain (at 25°C, 28Vdc) —
DC Coil, 10A contacts —
1- and 2-pole — 135mA maximum

AC or DC Coil, 4A contacts —
1-pole — 100mA maximum
2-pole — 150mA maximum
3- and 4-pole — 200mA maximum

Contact Ratings —
DC Coil, 10A contacts —
10A resistive @ 30Vdc
5A inductive @ 30Vdc
5A resistive @ 115 Vrms, 400 Hz
3A inductive @ 115 Vrms, 400 Hz

AC or DC Coil, 4A contacts —
4A resistive @ 30Vdc
1A inductive @ 30Vdc
2A resistive @ 115 Vrms, 400 Hz
1A inductive @ 115 Vrms, 400 Hz

Environmental Specifications

Temperature Range —
-55°C to +125°C

Vibration — 20 G's, 10 - 2,000 Hz

Shock — 50 G's, 11 ± 1ms duration

Insulation Resistance — 1,000 megohms, min., at 500Vdc

Dielectric Strength — 1,000Vrms, 60 Hz., at sea level, all terminals to case

Sealing — Hermetic, 1.3 in. (33.0mm) of mercury

Life — 100,000 operations, min. (4A models); 50,000 operations, min. (10A models);

Weight —
4A units — 4.5 oz (127.6g) max.
10A units — 8.5 oz (240g) max.

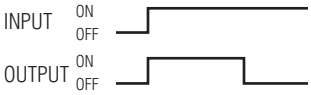

KILOVAC 4600/4700 series interval timers combine solid state timing circuits with electromechanical output relays in robust hermetically sealed enclosures. The 4600 types are fixed timers, while the 4700 models are adjustable via an external resistor. Numerous output options include 4A rated contacts in 1, 2 and 4 form C (SPDT, DPDT and 4PDT) arrangements and 10A rated contacts in 1-2 form C (SPDT-DPDT) arrangements.

Specifications by Model Number – 4 Amp Contact Versions

Fixed Timer Model Number	Adjustable Timer Model Number	Input Voltage	Temperature Range	Contact Rating	Contact Arrangement
4610	4710	DC	-55°C to +125°C	10 Amp	1 Form C (SPDT)
4611	4711	DC	-55°C to +125°C	10 Amp	2 Form C (DPDT)
4621	4721	DC	-55°C to +125°C	4 Amp	1 Form C (1PDT)
4622	4722	DC	-55°C to +125°C	4 Amp	2 Form C (DPDT)
4624	4724	DC	-55°C to +125°C	4 Amp	4 Form C (4PDT)
4671	4771	AC	-55°C to +125°C	4 Amp	1 Form C (SPDT)
4672	4772	AC	-55°C to +125°C	4 Amp	2 Form C (DPDT)
4674	4774	AC	-55°C to +125°C	4 Amp	4 Form C (4PDT)

Timing Diagram

Apply power and the output will energize. After time-out, the output will revert to de-energized state. Remove and reapply input to cycle.

Adjustable Timing Formula (4700 types)

The resistance required to obtain timing within this range is determined by using the formula:

Rx = 400K (T/Tmax.) – 40K, where

Rx = External Resistance in Ohms,
T - Desired Time in Seconds, and
Tmax. = Maximum Time (Code).

A high quality deposited carbon ±1%, 0.1W (min.) resistor is recommended for external resistance.

Part Numbering System

Typical Part Number	4722	–C	– 1102

Model Number:
Four digit code from table above.

Mounting (see outline dimension drawings):
A = Studs on bottom B = Studs on top C = Studs on side

Timing Code:
Four-digit code for any value between 100ms and 600s for fixed (4600) timers, and 100ms and 240s for adjustable (4700) timers.

The timing code consists of four digits and gives the time in ms. The first three digits are the significant figures and the last digit is the number of zeros following the significant figures; thus 50 ms would be coded 0500, 1.1 s would read 1101, and 1 m (60 s) would be 6002.

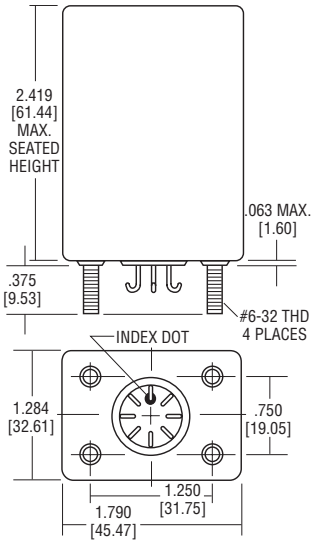

Adjustable timers cover one decade, e.g., 62 ms to 620 ms. The upper decade limit is Tmax. in the timing formula and is the the value defined by the timing code in the part number.

A typical part number for an adjustable timer would be 4722–C–1102. This is a DC unit in the -55°C to +125°C temperature range with a 2 form C (DPDT) contact arrangement in a style "C" mounting, with a maximum time delay of 11s.

Product Facts

- DC input fixed delay interval timer
- 1 Form A (SPST-NO), 500mA output
- CMOS digital design
- Reverse polarity protection
- Hermetic package
- Built to MIL-R-83726 environmentals
- Customizing options include
  - Adjustable timing
  - Tighter timing tolerances
  - Header and mounting
  - Relay output
  - AC input

Electrical Specifications

Timing Range: 100 s. to 600 s.

Tolerance: ±10%.

Repeatability: ±2%.

Recycle Time: 0.5% of Max. Delay.

Input Data:

Input Voltage: 18 to 31Vdc.

Current Drain: 40mA. max.

Output Data:

Output Form: 1 Form A (SPST-NO).

Output Rating:
500mA @ +25°C;
200mA @ +125°C.

Saturation Voltage:
1.0V, 500mA (25°C).

Leakage:
10µA (125°C).

Environmental Specifications

Temperature Range:
-55°C to +85°C or -55°C to +125°C.

Vibration: 20 G's, 10 - 2,000 Hz.

Shock: 50 G's, 11 ± 1ms duration.

Insulation Resistance: 1,000 megohms, min., at 500Vdc.

Dielectric Strength: 500Vrms, 60 Hz., at sea level, all terminals to case.

Sealing: Hermetic, 1.3 in. (33.0mm) of mercury.

Life: Over 1 million operations.

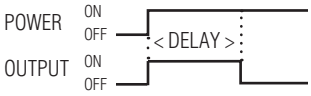

Weight: 2 oz (50g) max.

Plug-in sockets are available

KILOVAC 4800 series interval timers combine solid state timing circuits with solid state outputs in robust hermetically sealed enclosures. They are fixed timers. The 1 Form A (SPST-NO) output switch is rated 500mA.

Timing Diagram

Apply power and the output will energize After time-out, the output will revert to de-energized state. Remove and reapply power to recycle.

Part Numbering System

Typical Part Number	4801	–1	A	– 1102

Model Number:
4801 = Fixed timer, -55°C to +85°C
4851 = Fixed timer, -55°C to +125°C

Header Style (see Header Options drawings):
1 = Hook terminals 2 = Straight terminals, short
3 = Straight terminals, long

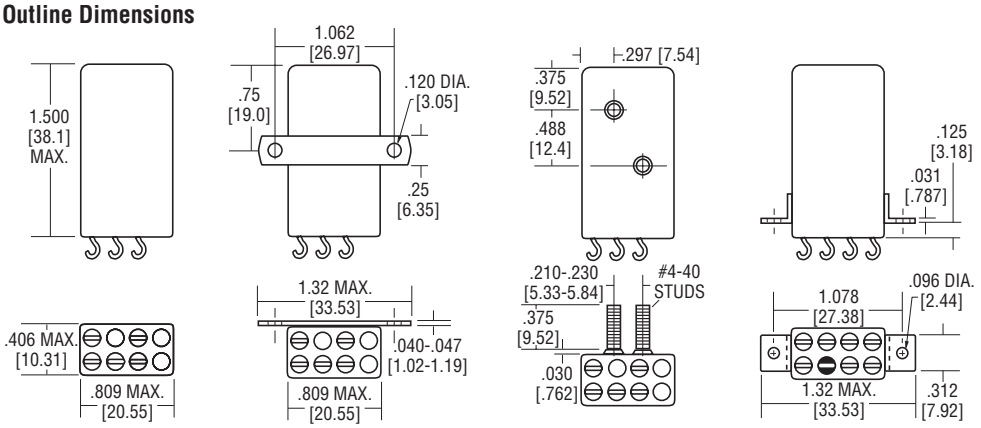

Mounting (see outline dimension drawings):
A = Plain case B = Bracket B C = Studs on side E = Bracket E

Timing Code:
Four-digit code for any value between 50ms and 600s.

The timing code consists of four digits and gives the time in ms. The first three digits are the significant figures and the last digit is the number of zeros following the significant figures; thus 50 ms would be coded 0500, 1.1 s would read 1101, and 1 m (60 s) would be 6002.

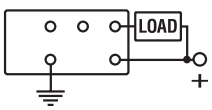

A typical part number would be 4801–1A–1102. This fixed timer operates at -55°C to +85°C, has hook terminals, style "A" mounting, and a time delay of 11s.

Product Facts

- Standard models combine DC voltage-sensing circuit with 2A DPDT output relay
- Various applications
  - Battery protection
  - Computer protection
  - Low or high voltage alarms
- Many customizing options
  - Solid state output
  - Two-stage sensing (voltage band)
  - Up to 10A relay output
  - Controlled dropout differential
  - Operate with auxiliary control voltage
  - Time delay on trip point
  - Tighter accuracy
  - Different package, mounting, header

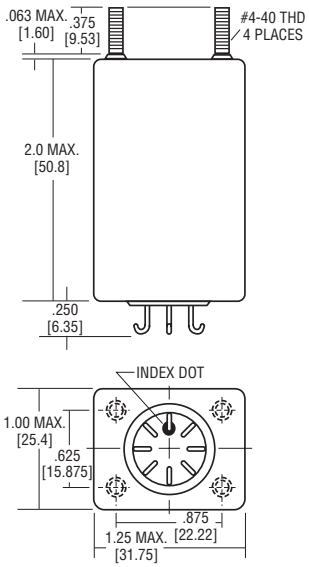

The KILOVAC 1310 series DC voltage sensor is essentially a voltage monitoring device operating a snap-action transistor circuit with low drift and inherent temperature compensation. This device will either open or close a circuit when a predetermined voltage is present at the input. By using a KILOVAC electromechanical relay as the output of the voltage sensor, a positive switching action can be achieved with very close differential between pull-in and drop-out voltages. The unit is potted and hermetically sealed and is designed to meet the environmental requirements of MIL-R-83726.

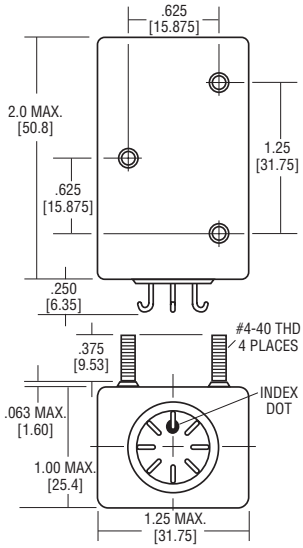

Outline Dimensions

Mounting Option A

Mounting Option B

Mounting Option C

Electrical Specifications

Pull-In Voltage — Any voltage level between 10 to 150Vdc

Drop-Out Voltage — 0 to 0.5V below pull-in voltage

Current Drain — 15mA max @ 25°C

Accuracy — ±2.5% of set point over temperature range

Max. Allowable Applied Voltage — 150% of specified pull-in voltage

Auxiliary Voltage — None required

Operate and Release Times — 50ms max. over the temperature range

Contact Arrangement — 2 Form C (DPDT)

Contact Rating —
2 amps resistive @ 30Vdc
300mA resistive @ 115 Vrms, 400 Hz

Environmental Specifications

Temperature Range —
-55°C to +125°C

Vibration — 20 G's, 10 - 2,000 Hz

Shock — 50 G's, 11 ± 1ms duration

Insulation Resistance — 1,000 megohms, min., at 500Vdc, all terminals to case

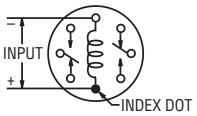

Dielectric Strength — 1,000Vrms, 60 Hz., at sea level, all terminals to case

Sealing — Hermetic, 1.3 in. (33.0mm) of mercury

Life — 100,000 operations, min.

Weight — 3.5 oz (99.2g) max.

1350 Series AC Voltage Level Sensor, Relay Output

Product Facts

- Standard models combine AC (400 Hz.) voltage-sensing circuit with 2A DPDT output relay
- Various applications
  - Motor protection
  - Ground support equipment
  - Low or high line alarms
  - Computer protection
- Many customizing options
  - Solid state output
  - Two-stage sensing (voltage band)
  - Up to 10A relay output
  - 3 phase version
  - Controlled dropout differential
  - Operate with auxiliary control voltage
  - Under and over voltage trip
  - Time delay on trip point
  - Tighter accuracy
  - Lower trip points
  - Different package, mounting, header
  - 60 Hz. versions

Electrical Specifications

Pull-In Voltage — Any voltage level between 50 to 150Vac, 400 Hz., in 1.0 volt increments

Drop-Out Voltage — 0 to 3.0V max, (1.5V nom.) below pull-in voltage

Current Drain — 100mA max @ 25°C

Accuracy — ±2.5% of set point over temperature range

Max. Allowable Applied Voltage — 150% of specified pull-in voltage

Auxiliary Voltage — None required

Operate and Release Times — 50ms max. over the temperature range

Contact Arrangement — 2 Form C (DPDT)

Contact Rating — 2 amps resistive @30Vdc
300mA resistive @ 115 Vrms, 400 Hz

Environmental Specifications

Temperature Range — -55°C to +125°C

Vibration — 20'G,s, 10 - 2,000 Hz

Shock — 50 G's, 11 ± 1ms duration

Insulation Resistance — 1,000 megohms, min., at 500Vdc, all terminals to case

Dielectric Strength — 1,000Vrms, 60 Hz., at sea level, all terminals to case

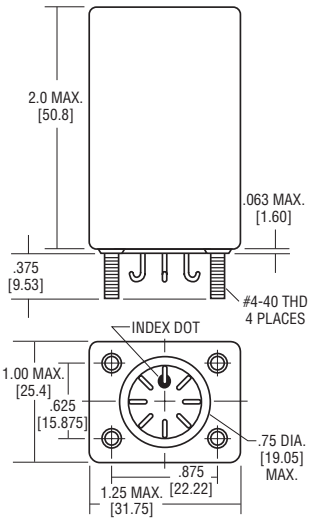

Sealing — Hermetic, 1.3 in. (33.0mm) of mercury

Life — 100,000 operations, min.

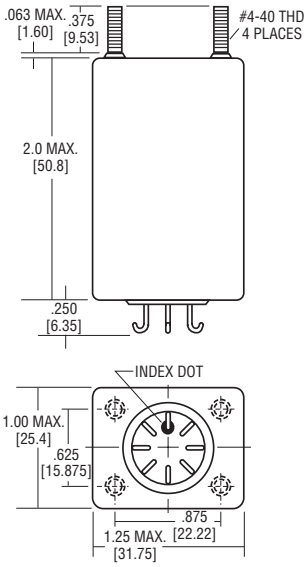

Weight: 3.5 oz (99.2g) max.

The KILOVAC 1350 series AC voltage sensor energizes a relay when the monitored power line voltage reaches a predetermined level. This rugged unit with reliable solid-state design provides precise, repeatable operation over a wide temperature range. The input voltage is fed into a temperature compensated comparator circuit. When the input reaches the preset level, transistor amplifiers switch the output relay. This output may control any external devices, process or warning system to protect expensive equipment. The unit is potted and hermetically sealed and is designed to meet the environmental requirements of MIL-R-83726.

1400 Series Phase Sensor 115 or 208Vac, 60 or 400 Hz., Relay Output

Product Facts

- Phase sensor for 115 or 208Vac, 60 or 400 Hz
- Up to 2A loads
- Static and motor load types
- Hermetic package
- Built to MIL-R-83726 environmentals
- Various applications
  - Motor protection
  - Brown-out protection
  - Power supply sequencing
  - Air conditioner protection
  - Ground support equipment protection
- Many customizing options
  - 50 Hz. input types
  - Contact ratings to 10A
  - Higher voltages
  - Different packages, headers and mounting

Electrical Specifications

Input Data —
Voltage — 115 or 208Vac
Frequency — 60 or 400 Hz

Operate Time (Max.) — 75 ms

Release Time (Max.) — 100 ms

Contact Arrangement — 1 Form C (SPDT)

Contact Ratings —
2A resistive @ 30Vdc
0.5A inductive @ 30Vdc
0.25A resistive or inductive @ 115 Vrms, 60 or 400 Hz

Environmental Specifications

Temperature Range —
-55°C to +85°C

Vibration — 20 G's, 10 - 2,000 Hz

Shock — 50 G's, 11 ± 1ms duration

Insulation Resistance — 1,000 megohms, min., at 500Vdc

Dielectric Strength — 1,000Vrms, 60 Hz., at sea level, all terminals to case

Sealing — Hermetic, 1.3 in. (33.0mm) of mercury

Life — 100,000 operations, min.

Weight — 12 oz (340g) max.

KILOVAC 1400 series phase sensors combine solid state sensing circuits with electromechanical output relays in robust hermetically sealed enclosures.

P-Type models are for static loads. With the line voltage and frequency are within operating limits, P-Type units will energize only when input phases are in sequence A-B-C. They will de-energize only when power is removed. The P-Type unit is best suited to applications where static loads are used and where regenerated voltage will not be present if a phase opens.

Q-Type units perform the same function as the P-Type since they will energize only when input phases are in sequence A-B-C. In addition, the Q-Type unit will de-energize when any phase is disconnected or grounded, provided the voltage input to the unit is below 50% of the nominal phase-to-phase voltage input. Q-Type units are suitable for motor loads where regenerated voltage is produced.

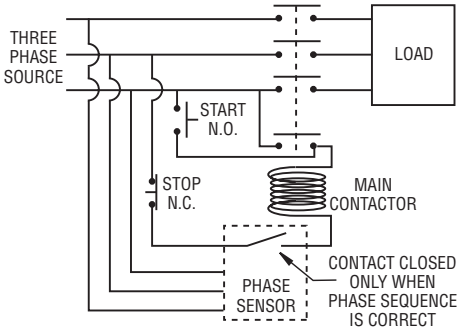

Neither P-Type nor Q-Type units require connection to the neutral leg.

For high-current applications, phase sensors are used with slave relays having heavy duty contact ratings.

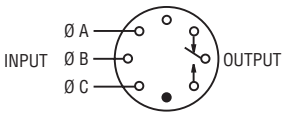

Specifications by Model Number

Fixed Timer Model Number	Load Type	Line to Line Voltage ±10%	Frequency ±10%	Max. Power Required	Mounting Style Figure
1407	P	115V	60 Hz.	4 Watts	3
1408	P	115V	400 Hz.	4 Watts	1 or 3
1409	P	208V	60 Hz.	6 Watts	3
1410	P	208V	400 Hz.	6 Watts	3
1437	Q	115V	60 Hz.	6 Watts	2
1438	Q	115V	400 Hz.	6 Watts	3
1439	Q	208V	60 Hz.	9 Watts	4
1440	Q	208V	400 Hz.	9 Watts	4

Typical Applications Connections

Wiring Diagram

Part Numbering System

Typical Part Number	1408	–1	A

Model Number:
Four digit code from table above.

Output:
1 = 1 Form C (SPDT)

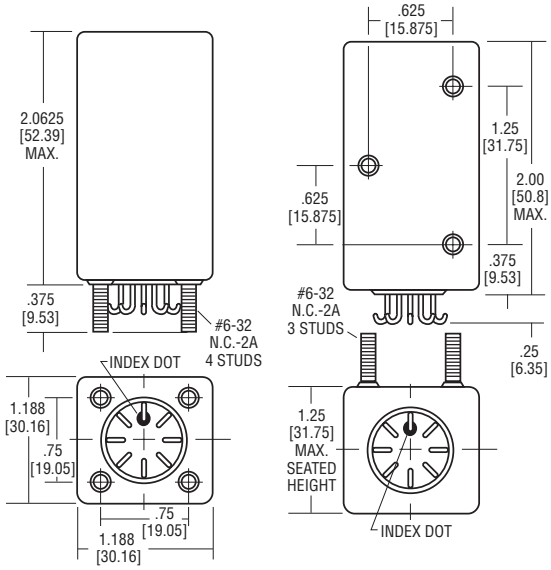

Mounting (see outline dimension drawings):
A = Studs on bottom B = Studs on top, except bracket on bottom for 1439 and 1440 C = Studs on side

A typical part number would be 1408–1A. This is a 115Vac, 400 Hz., "P" type phase sensor with a 1 form C (SPDT) contact arrangement in a style "A" mounting.

7000 Series Frequency Sensor

Product Facts

- 320 to 480 Hz. frequency sensor
- 1 or 2 Form C (SPDT or DPDT) contacts
- Hermetic package
- Many customizing options
  - 50 or 60 Hz. Sensing
  - Dual trip points
  - Tighter accuracy
  - Enclosures
  - Higher temperature range
  - Up to 4 Form C (4PDT)
  - 10A contacts

KILOVAC 7000 series frequency sensor utilizes an integrated circuit digital logic design to determine, cycle by cycle, whether a given input signal is within a predetermined frequency pass band. Typical application is in monitoring MIL-STD-704 power systems.

Part Numbering System

Typical Part Number	7000	–2	B	– 380

Model Number:
7000 - Frequency Sensor.

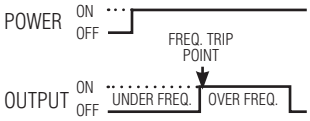

Contact Arrangement:
1 = 1 Form C (SPDT) 2 = 2 Form C (DPDT)

Mounting (see outline dimension drawings):
A = Studs on bottom B = Studs on top C = Studs on side

Frequency Trip Point:
Three-digit code for any value between 320 Hz. and 480 Hz.

A typical part number would be 7000-2B-380. This would be a sensor with a 2 form C (DPDT) contact arrangement in a style "C" mounting, with a 380 Hz. trip point for -55°C to +85°C temperature range .

Function Diagram

Electrical Specifications

Input Voltage — 95 to 135Vac, 400 Hz

Frequency Range — 320 to 480 Hz

Accuracy — ± 2%

Contact Arrangement — 1 Form C (SPDT) or 2 Form C (DPDT)

Contact Ratings — 4A resistive @ 30Vdc
2A resistive @ 115 Vrms, 400 Hz

Current Drain — 150mA maximum

Hysteresis — 0.5% from trip point

Environmental Specifications

Temperature Range — -55°C to +85°C

Vibration — 20 G's, 10 - 2,000 Hz

Shock — 50 G's, 11 ± 1ms duration

Insulation Resistance — 1,000 megohms, min., at 500Vdc, all terminals to case

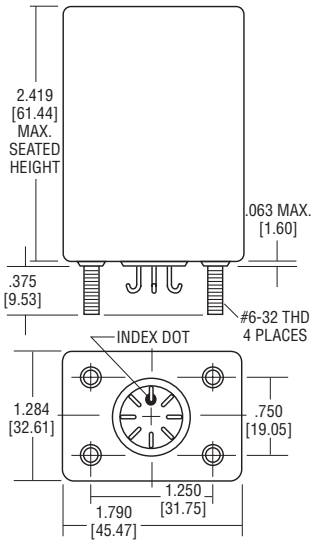

Dielectric Strength — 1,000Vrms, 60 Hz., at sea level, all terminals to case

Sealing — Hermetic, 1.3 in. (33.0mm) of mercury

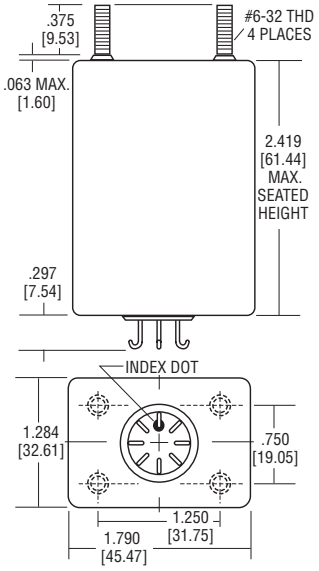

Life — 100,000 operations, min.

Weight — 8.5 oz (240g) max.

DS11 Series SSR For DC Loads up to 2A @ 60Vdc

Product Facts

- Standard options: short circuit/overload protection, switch status and trip status
- Optically coupled all solid state relay
- TTL & CMOS compatible input
- Low on-resistance power MOSFET output
- Tested per MIL-PRF-28750D and approved to DSCC drawing 88062 with "Y" level screening

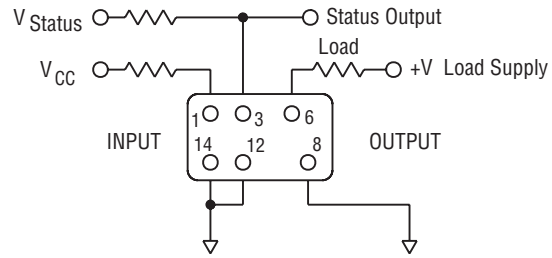

DS11 series SSRs feature state of the art photo-voltaic optical isolation and power MOSFET output chips for ultra-reliable high speed switching of DC loads up to 2 amps, with extremely low on-resistance. Standard options include integral current overload/short circuit protection to provide protection of the relay, load and wiring; and isolated switch status or trip status. The overload feature provides protection if a short or overload develops while the relay is in the on state or if the relay is turned on into a dead short. Switch status, optically isolated from the load, signals the status of the output and provides a logic "0" when the output is off and a logic "1" when the output is on. Trip status, also optically isolated from the load, provides a logic "1" if the output trips off and a logic "0" when the output is in a normal condition, on or off, and is available only in conjunction with short circuit protection.

TOLERANCE:
± 0.010 (0.25mm) FOR 2 PLACE DECIMALS,
± 0.005 (0.13mm) FOR 3 PLACE DECIMALS.
UNLESS OTHERWISE SPECIFIED

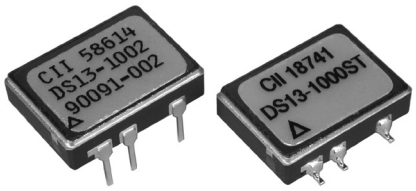

Notes

1. 2 terminal input configuration is compatible with CMOS or open collector TTL (with pull-up resistor). For Vcc levels above 6Vdc, a series limiting resistor is required. See Fig. 2 for resistor value. Use standard resistor value equal to or less than value from the curve.
2. Input transitions to be ≤ 1ms duration, and input direct drive should be "bounceless contact" type.
3. Vcc = 5Vdc for all tests unless otherwise specified.
4. All DS11 Series relays may drive loads connected to either positive or negative referenced power supply lines. Reversing polarity of output may cause permanent damage. Inductive loads must be diode suppressed.
5. Transient blocking voltage and electrical system spike tests are performed per MIL-STD-704 (28VDC systems).
6. To determine the maximum on-resistance at any given junction temperature, multiply on-resistance at 25°C (0.15 ohm) by normalized on-resistance factor from curve (Fig. 6).
7. Overload testing per MIL-R-28750 is constrained to the limits imposed by the short circuit protection requirements of this specification and DSCC drawing 88062. Load circuit series inductance for "load shorted" mode of operation to be limited to 50mH max. Maximum repetition rate into a shorted load should not exceed 10 Hz.
8. Proper operation of the status feedback requires a status pull-up resistor. See Fig. 5 for status resistor value.

DS13 SSR for loads up to 2A @ 60Vdc

Product Facts

- Standard options: short circuit/overload protection and control status.
- Optically coupled all solid state relay.
- TTL & CMOS compatible input.
- Low on-resistance power MOSFET output.
- Tested per MIL-PRF-28750D and approved to DSCC drawing 90091.
- All versions available with Tyco Electronics “W” level screening for KILOVAC relays.

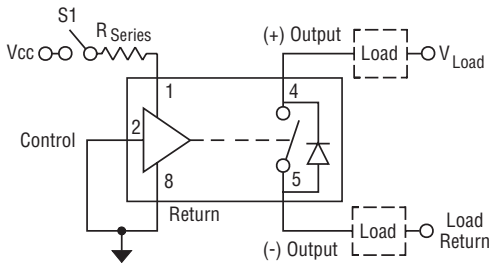

DS13 series SSRs employ state of the art photovoltaic optical isolation and power MOSFET output chips for ultra-reliable high speed switching of DC loads up to 2 amps, with low on-resistance. Standard options include integral current overload/short circuit protection and a separate input control status line. The overload feature provides protection of the relay, load and load circuit wiring in the event of a sustained current overload or short circuit while the relay is on or when it is turned on into a short. The control status provides a built-in test function which provides a logic “0” when the input circuit is energized and functional. The relay is packaged into a custom hermetically sealed low-profile 8-pin ceramic DIP package, with through hole or surface mount pins.

KILOVAC Part No.	DSCC Dwg. No.	Relay Version
DS13-1Y	90091-008	Basic relay
DS13-1000	90091-004	Relay w/ short circuit protection
DS13-1001	90091-006	Relay w/ control status
DS13-1002	90091-002	Relay w/ short circuit protection and control status

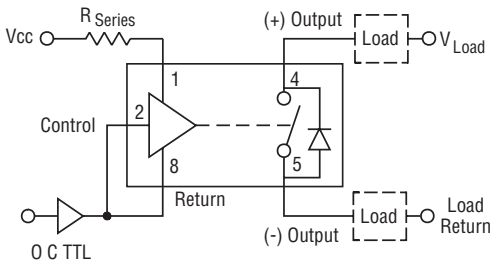

Notes: Add suffix “S” to part number for surface mount versions.
Add suffix “T” to part number for tinned leads.
Add suffix “W” to part number for lower screening level.

Surface Mount Version

Notes

1. 2 terminal input configuration is compatible with CMOS or open collector TTL (with pull-up resistor). For Vcc levels above 6Vdc, a series limiting resistor is required. See Fig. 2 for resistor value. Use standard resistor value equal to or less than value form the curve.
2. Vcc = 5Vdc for all tests unless otherwise specified.
3. All DS13 Series relays may drive loads connected to either positive or negative referenced power supply lines. Reversing polarity of output may cause permanent damage. Inductive loads must be diode suppressed.
4. Transient blocking voltage & electrical system spike tests are performed per MIL-STD-704 (28Vdc systems).
5. To determine the maximum on-resistance at any given junction temperature, multiply on-resistance at 25°C by normalized on-resistance factor from curve (Fig. 4).
6. Overload testing per MIL-R-28750 is constrained to the limits imposed by the short circuit protection requirements of this specification and DSCC drawing 90091. Load circuit series inductance for "load shorted" mode of operation to be limited to 50mH max. Maximum repetition rate into a shorted load should not exceed 10 Hz. To calculate maximum on-resistance at any temperature, use the following equation: R(on) = R(on) @ 25°C x NF (without short circuit protection) and R(on) = 0.2 x NF + .21 (with short circuit protection) where NF = normalized on-resistance factor from Fig. 4.
7. Proper operation of the status feedback requires a status pull-up resistor. Select the status resistor such that it limits status output current to 2mA: R status = V status – 0.3V / 2mA.

MS14 Series Solid State Relay, With DC or Bi-Directional Output to 350mA @ 400V

Product Facts

- **1000V optical isolation protects control and driver circuitry from load transients.**
- **Buffered/current limited input for direct drive from CMOS or TTL logic.**
- **Power MOSFET output chips for low voltage drop.**
- **90 & 240mA output current.**
- **85, 100 & 400V output voltage.**
- **Subminiature hermetically sealed .100 grid package.**
- **Screened per "Y" level of MIL-PRF-28750D.**
- **Direct replacement for TELEDYNE M92F & M93F series**

MS14 series subminiature SSRs employ state of the art photo-voltaic optical isolation providing 1000Vrms input/output isolation and power mosfet output chips for ultra-reliable high speed switching of DC or bidirectional loads up to 350mA and 400Vdc. The input is current regulated and buffered to minimize power dissipation and permit driving the relay direct from CMOS or TTL. The relay is packaged in a custom hermetically sealed low-profile .100 grid package which conserves space for high density PC board circuitry.

Ordering Information

KILOVAC Part No.	DSCC Drawing/Pin No.	Output Rating
MS14-1Y	87034-001	350mA / 400V
MS14-2Y	87034-002	135mA / 400V
MS14-3Y	87034-003	±240mA / 85V

Environmental Characteristics

Ambient Temperature Range:
Operating: -55°C to +105°C.
Storage: -55°C to +125°C.

Vibration Resistance:
30 G's, 10-3,000 Hz.

Shock Resistance:
1,500 G's, 0.5 ms pulse.

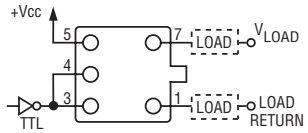

Constant Acceleration Resistance:
5,000 G's.

Mechanical Characteristics

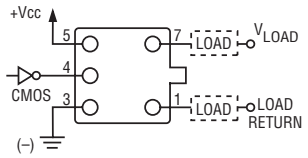

Weight (max.):
.07 oz. (2 grams)

Materials:
Case: Nickel, hermetically sealed.
Pins: Kovar, gold plated

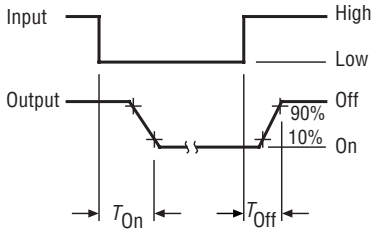

Figure 4 - Temperature Derating Curve

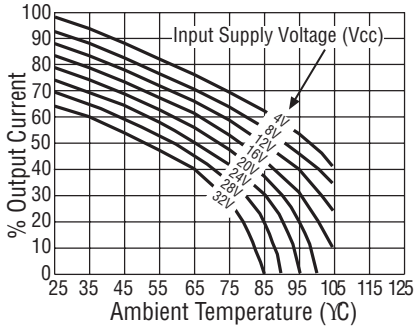

Figure 5 - On-Resistance vs. Temperature (Note 6)

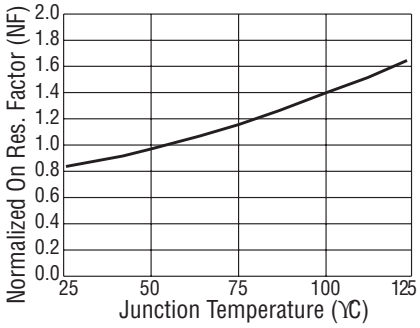

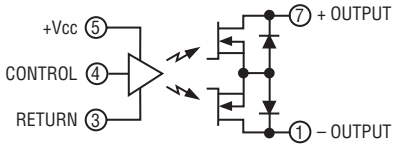

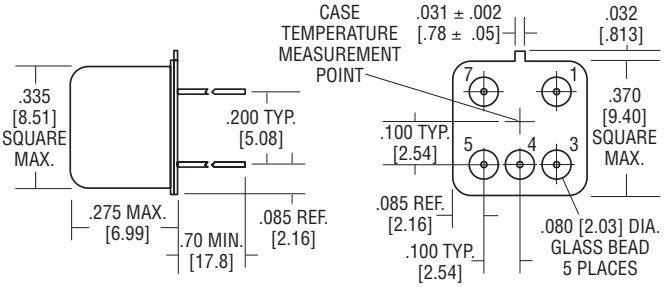

Figure 6 - Simplified Circuit

Note: MS14-1Y and -2Y have a single output chip.

Figure 7 - Outline Dimensions

Unless otherwise specified, tolerances are:
±0.010 [0.25] for 2 place decimals
±0.005 [0.13] for 3 place decimals

Terminal numbers are for reference only and do not appear on the header.

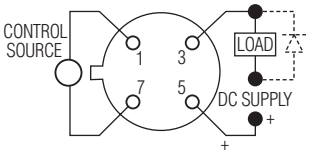

Notes

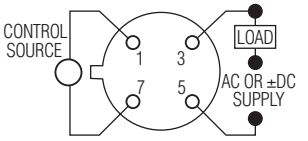

1. 2 terminal input configuration is compatible with CMOS or open collector TTL (with pull-up resistor).
2. For Vcc levels above 6Vdc, a series limiting resistor is required. See Fig. 2 for resistor value. Use standard resistor value equal to or less than value form the curve.
3. Vcc = 5Vdc for all tests unless otherwise specified.
4. All MS14 Series relays may drive loads connected to either positive or negative referenced power supply lines. Inductive loads must be diode suppressed.
5. If an input series current limiting resistor is used, derating of output current vs. Vcc is not necessary. Curve for 4V applies.
6. On-resistance at any ambient temperature other than 25°C can be computed as follows:
   R (@ any T) = R (@ +25°C) x $e^{0.006}$, where T = new temperature – 25°C, e = 2.7182818 .

JTS5, 6, & 7 Series, DC & Bi-Directional Output, Up to 250mA & 250V Output Rating, TO-5 Package

Terminal View

Input Characteristics

Input Voltage Range — 4.0 – 7.0 Vdc

Maximum Turn-on Voltage — 5.0 Vdc

Minimum Turn-off Voltage — 1.0 Vdc

I/O Dielectric — 1000 Vac pk-pk

Output Characteristics

Max. Output Current (Continuous, 25°C) — 50 mAac or mAdc (JTS5-1Y)
250 mAdc (JTS6-1Y)
100 mAdc (JTS7-1Y)

Max. Output Voltage — 40 Vac or Vdc (JTS5-1Y)
40 Vdc (JTS6-1Y)
250 Vdc (JTS7-1Y)

Max. On-resistance — 5 ohms (JTS5-1Y)

Turn-on Time — 10 µsec.

Turn-off Time — 15 µsec.

Environmental Characteristics

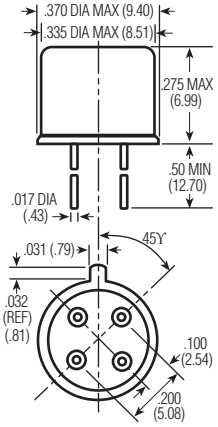

Shock — 1500 G's, 0.5 ms.

Vibration — 100 G's, 10 to 2000 Hz

Operating Ambient Temperature — -55 to +125°C

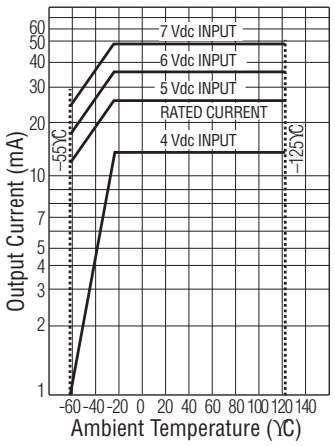

Product Facts

- **Hermetically sealed TO-5 package**
- **Transformer coupled**
- **High speed switching**
- **JTS5-1Y switches AC or DC**
- **Qualified to M28750/5, 6, & 7**

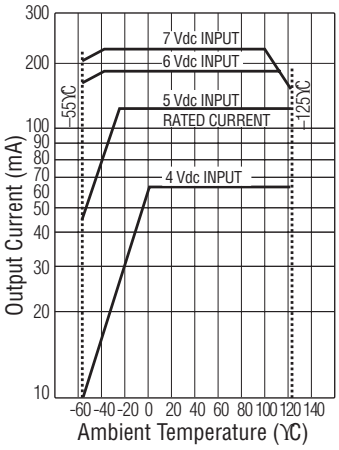

JTS5/JTS6/JTS7

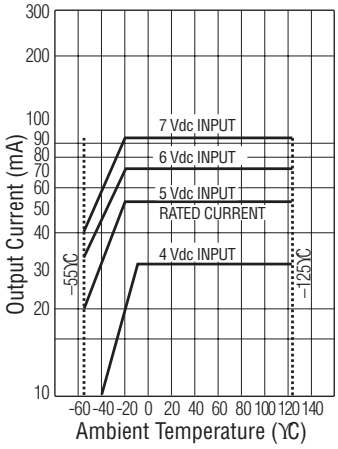

Notes: 1) Reversing polarity of input (or output except for JTS5-1) may cause permanent damage.
2) Input must be a step function. Rise or fall time, as applicable, not to exceed 100 µsec.
3) Inductive loads must be diode suppressed.
4) For any control voltage, the maximum load current shown on graphs must not be exceeded. Attempting to draw currents in excess of those specified on graphs can cause permanent damage.

Output Current Vs. Input Control Voltage and Ambient Temperature

MS18-1006 High Performance DC and Bi-directional Solid State Relay For Loads up to 2A @ 80Vdc

Product Facts

- Bi-directional power FET output
- Optically coupled
- Low on-resistance
- Extremely low leakage current
- Subminiature hermetically sealed package
- Tested per MIL-PRF-28750D and approved to DSCC drawing 89116-006

The MS18-1006 is an optically coupled SSR employing power MOSFET output chips in an inverse series configuration for switching DC or bi-directional loads. A common source connection is provided for the user to configure the output switching circuit for DC operation up to 2A with very low on-resistance. The relay features fast switching speeds, low off-state leakage, virtually zero offset voltage and the capability to withstand high inrush currents up to 350% of rated. The low profile subminiature package is hermetically sealed with pinouts on a 0.1" x 0.3" grid pattern.

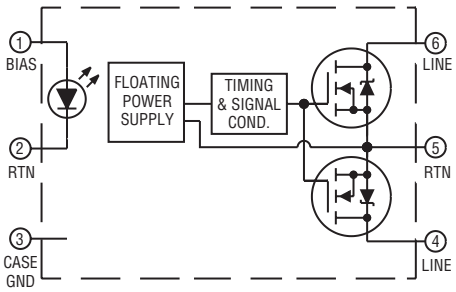

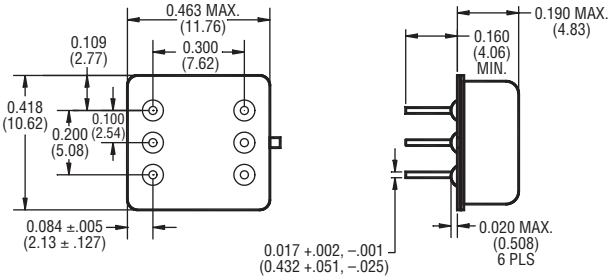

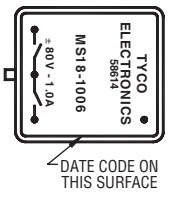

Figure 5 - Outline Dimensions

Notes

1. An external resistor must be in series with the input at all times.
2. Do not ramp input current. Input transition should be <1.0ms.
3. Input current/series resistor calculation (Approx.): $I_{(input)} = V_{IN} - V_{DROP}/R_{SERIES}$.
4. Unless otherwise specified parametric testing is accomplished at 25ma input current.
5. To calculate $R_{DS(ON)}$ for temperatures other than 25°C, use the following equation: $T_{(TEMP)} = (R_{DS(ON)}$ at + 25°C) • $e^{(X \bullet \varnothing T)}$ where x = 0.0065.
6. Inductive loads must be diode suppressed.
7. Continuous load current is rated under conditions of still air.
8. Load may be connected to either side of relay, sink or source modes.
9. Reverse polarity >5Vdc may cause permanent damage
10. Acceptance testing is accomplished in the series (bi-directional) mode.
11. DSCC part numbers 89116-002 & 89116-004 are also available.

JDS9 Series, AC Relays, 2A/250Vrms Rating

Input Characteristics

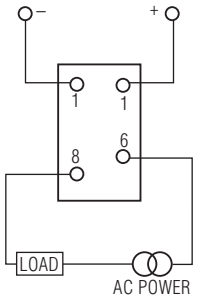

Input Voltage Range — 3.8 – 32 Vdc
Pick-up Voltage — 3.8 Vdc
Dropout Voltage — 1.5 Vdc
I/O Dielectric — 1500 Vrms

Output Characteristics

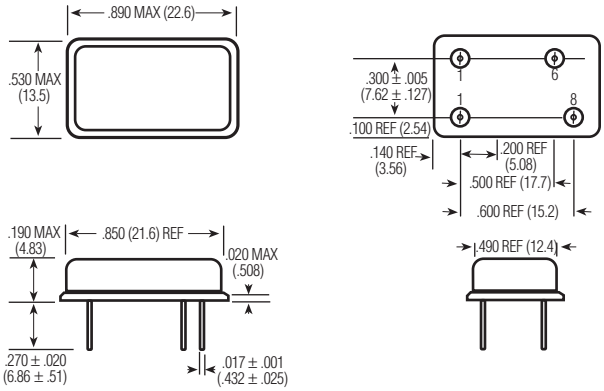

Max. Output Current (Continuous, 25°C) — 2 Arms
Max. Output Voltage — 250 Vrms
Peak Over Voltage Rating — 500 Vpk
Frequency Range — 40 – 440 Hz
Zero Switch Window — 15 Vpk
Thermal Resistance —
Junction to Ambient — 65°C/Watt
Junction to Case — 15°C/Watt

Environmental Characteristics

Shock — 1500 G's, 0.5 ms.
Vibration — 30 G's, 10 to 3000 Hz
Operating Ambient Temperature — -55 to +110°C

JDS9 Typical Input Current vs. Input Voltage

JDS9 Series, AC Relays, 2A/250Vrms Rating (Continued)

Electrical Specifications (-55°C to +105°C unless otherwise specified)

Input	
Input supply voltage range (Vcc)	3.8 - 32 Vdc
Input current (max.) @ 5Vdc	15mAdc
Must turn-on voltage	3.8Vdc
Must turn-off voltage	1.5Vdc
Reverse voltage protection	-32Vdc
I/O	
Dielectric strength (min.)	1,500V rms/60 Hz.
Insulation resistance (min.) @ 500Vdc	10^9 ohms
Capacitance (max.)	10pF
Output	
Output current rating (max.)	2A rms (Fig. 2, Note 1)
Surge current (max.), 16ms @ 25°C (max.)	8A pk (Fig. 1, Note 3)
Continuous load voltage (max.)	250V rms
Transient blocking voltage (max.)	500V pk
Frequency range	40 - 440 Hz.
Output voltage drop (max.) @ 1A load current	1.5V rms
Off-state leakage current (max.) @ 250V rms/400 Hz.	1mA rms
Turn-on time (max.)	1/2 cycle
Turn-off time (max.)	1 cycle
Off-state dv/dt (min.), with snubber	200V /µs (Note 2)
Zero voltage turn-on window (max.)	10V
Wave distortion (max.)	4V rms
Output chip junction temperature (max.)	130°C
Thermal resistance (max.), junction to ambient	65°C/W
Thermal resistance (max.), junction to case	15°C/W

Notes

1. Operation at elevated load currents up to 2 amps is dependent on the use of suitable heatsink to maintain case temperature.
2. Recommended output snubber: R = 100 ohms (1/2 W), C = .01µF (600V).
3. Heating of output chip during and after a surge may cause loss of output blocking capability until junction temperature falls below maximum rating.

PS12 Series High Performance Solid State Relays For AC Loads up to 10A @ 250Vrms

Product Facts

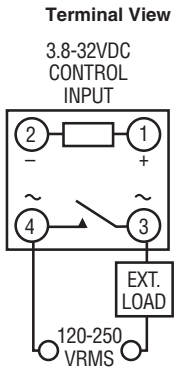

- Approved to DSCC drawing 86031
- Optically coupled all solid state relay
- TTL compatible input
- Zero voltage turn-on for low EMI
- Custom power package with screw terminals

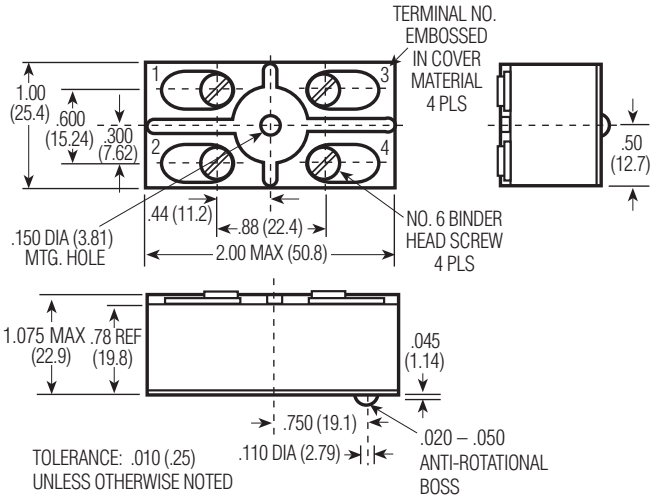

The PS12 series solid state relay is designed for AC power switching up to 10 amps at 250Vrms. The circuit employs back-to-back SCRs with zero voltage turn-on for reliable switching of resistive or reactive loads. TTL compatible input circuitry is optically isolated to 1,500Vrms from the AC load circuit. The relay is offered in two versions: the PS12-1Y with "Y" level screening per MIL-PRF-28750D, and the PS12-1W screened per Tyco Electronics specifications for KILOVAC relays, equivalent to former "W" level of Mil-R-28750.

KILOVAC Part Number	DSCC Part Number	Screening Level
PS12-1Y	86031-001	Y
PS12-1W	N/A	W

Users should thoroughly review the technical data before selecting a product part number. It is recommended that user also seek out the pertinent approvals files of the agencies/laboratories and review them to ensure the product meets the requirements for a given application.

The WD series offers several different models of protective relays in a common package that is suitable for either DIN rail or screw mounting. These flexible, multifunction devices offer user selectable voltages, sense currents and frequencies. Adjustable time delays are standard. This allows a single part number to be suitable for multiple applications, thereby reducing inventory costs.

Specifications Common to All Models

Power Consumption — 2.5VA, maximum.

Contact Ratings — 5 amps, resistive, at 120VAC. 5 amps, resistive, at 30VDC.

Isolation from Control to Sense Inputs — 2,500VAC.

Mechanical Life — 10 million operations.

Shock — 10g.

Vibration — 0.062 (1.57) double amplitude at 10-55 Hz.

Terminals — M3.5 screws.

Maximum Wire Size — 2 x 24 AWG (2.5mm²) solid to DIN 46288 or 2 x 16 AWG (1.5mm²) stranded w/end sleeves.

Operating Temperature Range — -40°C to +60°C.

Enclosure — Plastic case (not sealed).

Mounting Options — Snap mounts on standard DIN rail (DIN-EN 50022-35) or panel mounts with M4, M5, #8 or #10 screws.

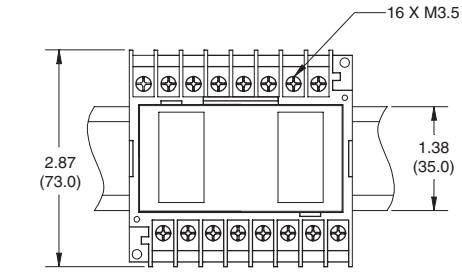

Weight — 14.4 oz. (400g) approximately.

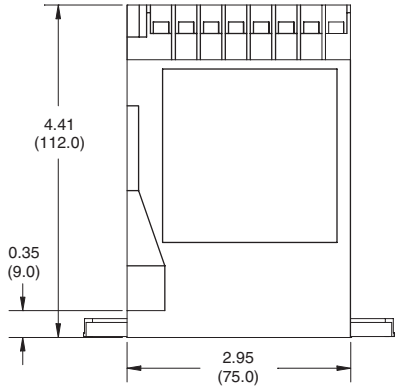

Installation and Maintenance Information

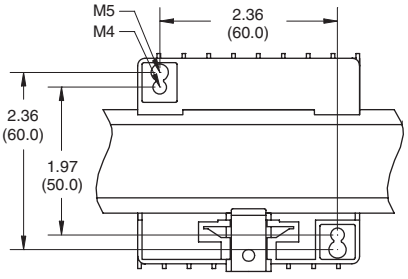

Installation — To mount the WD series protective relay on a DIN rail, hook the top edge of the cutout on the base of the case over one edge of the DIN rail, then press the opposite side of the cutout containing the release clip over the opposite side of the DIN rail. To remove or reposition the relay, lever the release clip and move the relay as required. WD series relays should be installed in a dry location where the ambient temperature will be within the operating temperature range.

Maintenance — WD series protective relays are solid state devices that require no maintenance. They are not designed to be serviced by the user. Consult KILOVAC customer service at 805-220-2023 if repairs should be necessary.

Outline Dimensions

KILOVAC WD25 Paralleling Relays

Product Facts

- **Function 25**
- **ANSI/IEEE C37.90-1978**

WD25 Operation

WD25 paralleling relays are used to ensure that two circuits are synchronized. When voltage, phase relationship and frequency are within the selected synchronizing limits, the output relay will energize. The WD25 paralleling relay allows for a generator to be brought online without damage or system disturbance. WD25 series with a "dead bus" feature will energize for a synchronized condition or an "on line" generator, "dead bus" condition. This "dead bus" feature allows the generator to energize a dead bus. The "double dead bus" feature permits paralleling of two buses when: (a) both the line voltages are equal and in phase, or (b) when either bus is "hot" and the other bus is "dead."

WD25 Specifications

Nominal Operating Range — 120, 208, 277 or 480 VAC, selectable.

Maximum Sensing Range — 575VAC.

Nominal Frequency Range — 40-400 Hz.

Contact Form — 2 form C (DPDT).

WD25 Calibration

The calibration marks on the faceplate are provided only as guides. Proper calibration requires using an accurate voltmeter. Use the following procedure to calibrate the WD25:

1. Remove the cover.
2. Adjust the SYNC VOLTAGE control fully counterclockwise (CCW). Apply nominal voltage to the LINE B (bus) sensing terminals.
3. Apply the maximum desired synchronization voltage to the LINE A (generator) terminals. This voltage should be in phase with LINE B (bus) voltage and have the same frequency.
4. Slowly adjust the SYNC VOLTAGE control clockwise (CW) until the relay energizes.

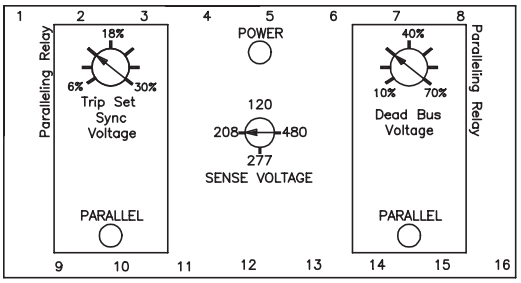

Sense Voltage

Voltage (nominal)	120	208	277	480
Synch Voltage (% of nom.)	6 - 30% (≈ 4°- 20° electrical degree)			
Dead Bus Voltage (% of nom.)	10 - 70% (Dead Bus)			

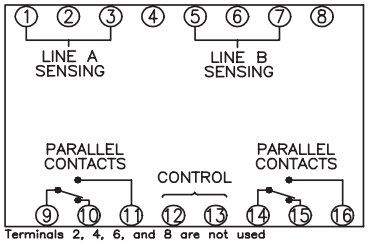

Control Voltage

Model WD25	-0X1	-0X2	-0X3
Input Voltage (VDC)	18 to 54	13.5 to 32	100 to 200
Input Voltage (VAC)	—	—	100 to 140

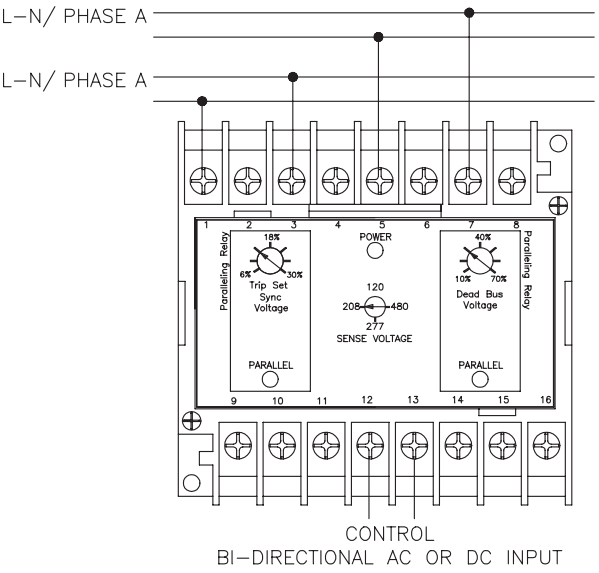

WD25 Controls

WD25 Connections

WD25 Typical Hookup

NOTE: For single dead bus option, connect the generator to 1 & 3 and the bus to 5 & 7.

KILOVAC WD2759 Over/Undervoltage Relays

Product Facts

- **Function 27/59**
- **ANSI/IEEE C37.90-1978**

WD2759 Operation

WD2759 AC voltage sensing relays provide voltage monitoring and protection in AC systems from 50 to 400 Hz. Sensing voltages, number of phases, over and undervoltage setpoint, and time delays are user configured. WD2759 voltage relays operate when the externally adjustable trip point is reached. An external time delay control is provided with an adjustment of .5 to 10 seconds. This time delay may be used to prevent false tripping when there are slight variations in the voltage supply. On overvoltage (OV) the output relay energizes when the input signal exceeds the trip point. On undervoltage (UV) the output relay energizes when the input signal goes below the trip point. A green LED indicates power to the relay. Red LED lights indicate the state of the undervoltage and overvoltage trips.

Sense Voltage

Voltage (nominal)	120	208	277	480
UV Adjustment Range	72-120	125-208	166-277	288-480
OV Adjustment Range	120-168	208-291	277-388	480-672

Control Voltage

Model WD2759	-001	-002	-003
Input Voltage (VDC)	18 to 54	13.5 to 32	100 to 200
Input Voltage (VAC)	—	—	100 to 140

WD2759 Specifications

Nominal Operating Range — 120, 208, 277 or 480 VAC, selectable.

Maximum Sensing Range — 700VAC.

Nominal Frequency Range — 50-400 Hz.

Contact Form — 1 form C (SPDT) for undervoltage and 1 form C (SPDT) for overvoltage.

Time Delay Adjustment — 0.5 to 10 sec.

WD2759 Calibration

The calibration marks on the faceplate have a maximum error of 10% and are provided only as guides. Proper calibration requires using an accurate voltmeter in parallel with the input signal. Use the following procedure to calibrate your relay.

OVER VOLTAGE

1. Remove cover.
2. Adjust the TRIP SET control fully clockwise (CW) and the TIME DELAY control fully counterclockwise (CCW).
3. Apply the desired trip voltage to the relay.
4. Slowly adjust the TRIP SET control CCW until the relay trips.
5. Remove the applied voltage (do not change the voltage level) and set the TIME DELAY control to the desired time delay.
6. Apply the trip voltage to the relay and measure the time to trip.
7. Adjust the TIME DELAY and repeat steps 4 and 5 until you have the desired time delay.

UNDER VOLTAGE

1. Remove cover.
2. Adjust the TRIP SET control fully CCW and the TIME DELAY control fully CCW.
3. Decrease the applied sensing voltage from the nominal value until the desired tripping voltage is reached.
4. Slowly adjust the TRIP SET control CW until the relay trips.
5. Set the TIME DELAY control to the desired time delay and apply nominal voltage to the relay.
6. Step down the applied voltage from nominal to a level jest below the trip level set in Step 3 and measure the time delay.
7. Adjust the TIME DELAY and repeat steps 4 and 5 until the desired time delay is achieved.

Ordering Information

Typical Part Number ▶ **WD 2759 -002**

WD2759 Typical Hookup

KILOVAC WD32 Reverse Power Relays

Product Facts

- **Function 32**

WD32 Operation

WD32 reverse power relays are used to monitor the direction of power from AC generators. This is accomplished by measuring I cos q. If current from the generator is reversed and exceeds the adjustable setting, the relay will trip. A 0.5 to 20 second time delay is provided. A correct setting of the trip point and time delay will prevent motorizing the generator and prevent tripping during transients that occur while synchronizing. A POWER LED indicates the condition of the power supply and a REVERSE POWER TRIP LED indicates the output status of the relay.

WD32 Specifications

Nominal Operating Range — 120 to 480 VAC, 1 or 3 phase.

Maximum Sensing Range — 575VAC.

Nominal Sensing Current — 5A.

Nominal Frequency Range — WD32-00X — 40-400 Hz.; WD32-01X — 60 Hz.

Contact Form — 2 form C (DPDT).

Time Delay Adjustment — 0.5 to 20 sec.

Sense Current — Reverse Power Trip: 0.2 to 1.0A (4-20% of nominal sense current).

Control Voltage

Model WD32	-001	-002	-003
Input Voltage (VDC)	18 to 54	13.5 to 32	100 to 200
Input Voltage (VAC)	—	~	100 to 140

WD32 Calibration

The calibration marks on the faceplate have a maximum error of 10% and are provided only as guides. Proper calibration requires using an accurate Current Meter in series with the input current. Use the following procedure to calibrate your relay.

REVERSE POWER

1. Remove cover.
2. Adjust the TRIP SET control fully clockwise (CW) and the TIME DELAY control fully counterclockwise (CCW).
3. Apply the desired trip current to the relay. NOTE: for the Reverse Power (WD32-00X) a resistive load must be used and for the Reverse kVAR (WD32-01X) an inductive load must be used.
4. Slowly adjust the TRIP SET control CCW until the relay trips.
5. Remove the applied Current and set the TIME DELAY control to the desired time delay.
6. Re-apply the Current (10% more than the trip current) to the relay and measure the time to trip.
7. Adjust the TIME DELAY and repeat steps 4 and 5 until you have the desired time delay.

Ordering Information

Typical Part Number ▶ **WD 32 -00 2**

1. Basic Series:
WD = DIN mount Protective Relay.

2. Type:
32 = Reverse Power Relay.

3. Load:
00 = Resistive (power)
01 = Inductive (kVAR, 60 Hz.)

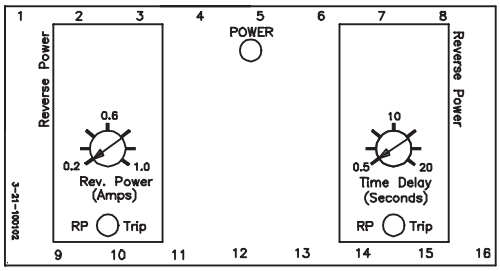

4. Control Voltage:
1 = 18 to 54VDC
2 = 13.5 to 32 VDC
3 = 100-200VDC or 100-140VAC.

KILOVAC WD47 Phase Sequence Relays

Product Facts

- **Function 47**
- **ANSI/IEEE C37.90-1978**

Control Voltage

Model WD47	-001	-002	-003
Input Voltage (VDC)	18 to 54	13.5 to 32	100 to 200
Input Voltage (VAC)	—	—	100 to 140

WD47 Operation

WD47 phase sequence relays are designed to monitor the correct phase rotation and loss of phase of three phase ac systems from 50 to 400 Hz. An incorrect phase sequence or loss of any phase will cause the WD47 to pickup. When the phase sequence is corrected or the lost phase is restored the contacts dropout. Red LED's light to indicate a fault condition. A green LED indicates power to the relay. The WD47 is often used to detect reverse phase rotation or loss of phase to generators, busses, motors, and transformers.

WD47 Specifications

Nominal Operating Range — 120 to 480 VAC.

Maximum Sensing Range — 575VAC.

Nominal Frequency Range — 40-400 Hz.

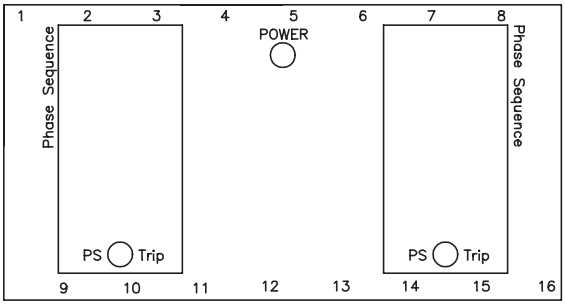

Contact Form — 2 form C (DPDT).

WD47 Calibration

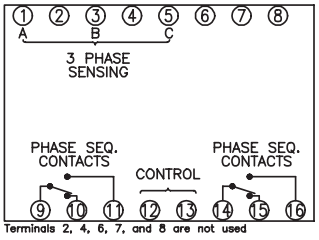

The WD47 has no adjustments and no calibration is necessary. Proper operation may be verified as follows:

1. Apply a nominal, three-phase input with the correct phase sequence. The output relay should dropout and the green LED should light.
2. Apply a nominal, three-phase input with an incorrect phase sequence. The output relay should pickup and the red LED should light.
3. Apply only one or two phases with the correct phase sequence. The output relay should pickup and the red LED should light.

WD47-001

KILOVAC WD5051 1Ø and 3Ø Overcurrent Relays

Product Facts

- **Function 5051**

WD5051 Operation

WD5051 AC current sensing relays provide current monitoring and protection in AC systems from 50 to 400 Hz. Nominal Sensing Current, Instantaneous Over Current setpoint, Time Over Current setpoint, and Time Over Current time delay are user configured. WD5051 current relays operate when the externally adjustable trip point is reached. An external time over current time delay control is provided with an adjustment of .5 to 20 seconds. This time delay may be used to prevent false tripping when there are slight variations in the sensed current. With control power applied, the Instantaneous Over Current (IOC) contacts pick-up when the input signal exceeds the IOC trip setpoint. Similarly, with control power applied, the Time Over Current (TOC) contacts pick-up after the preset time delay when the Sense Current rises above the TOC trip setpoint. The IOC contacts may also be configured to function as an under current relay. A green LED indicates power to the relay. Red LED lights indicate the state of the IOC and TOC trips.

Sense Current

Current (nominal)	1	3	6	8
IOC	0.2 to 1.2	0.6 to 3.6	1.2 to 7.2	1.6 to 9.6
TOC	0.2 to 1.2	0.6 to 3.6	1.2 to 7.2	1.6 to 9.6

Control Voltage

Model WD5051	-001	-002	-003
Input Voltage (VDC)	18 to 54	13.5 to 32	100 to 200
Input Voltage (VAC)	—	—	100 to 140

WD5051 Specifications

Sense Current Full Scale — 1, 3, 6 or 8A, selectable.

Maximum Sensing Current — 10A continuous; 30A for 10 sec.; 60A for 2.5 sec.; 100A for 0.9 sec..

Nominal Frequency Range — 50-400 Hz.

Contact Form — 1 form C (SPDT) for IOC and 1 form C (SPDT) for TOC.

TOC Time Delay Adjustment — 0.5 to 20 sec.

IOC Operate Time (max.) — 0.2 sec.

WD5051 Calibration

The calibration marks on the faceplate are provided only as guides. Proper calibration requires using an accurate ammeter in series with the current source. Use the following procedure to calibrate your relay:

OVERCURRENT

1. Remover the cover.
2. Adjust the TRIP SET control fully clockwise (CW) and the TIME DELAY control (TOC only) fully counter-clockwise (CCW).
3. Apply the desired trip current to the relay.
4. Slowly adjust the TRIP SET control CCW until the relay trips.
5. Remove the applied current (do not change the current level). Set the TIME DELAY (TOC only) control to the desired time delay.

KILOVAC WD81OU Over/Underfrequency Relays

Product Facts

- **Function 81 OU**
- **ANSI/IEEE C37.90-1978**

WD81OU Operation

WD81OU frequency relays are used to provide frequency monitoring and protection to generators, buses, power supplies, and other equipment. The relay operates at voltages from 120 to 480 Vac and at nominal frequencies of 50, 60, and 400 Hz. External controls include nominal frequency selection, under frequency (UF) trip set, over frequency (OF) trip set, UF time delay, and OF time delay. A green LED indicates power to the relay. Red LED's indicate the status of the UF and OF trips.

WD81OU Specifications

Nominal Operating Frequency — 50, 60 or 400 Hz., selectable.

Maximum Frequency @ 400 Hz. Nominal — 1000 Hz.

Nominal Sensing Voltage — 20-480VAC.

Maximum Sensing Voltage — 575VAC.

Contact Form — 1 form C (SPDT) for underfrequency and 1 form C (SPDT) for overfrequency.

Time Delay Adjustment — 0.5 to 10 sec.

WD81OU Calibration

The calibration marks on the faceplate are provided only as guides. Proper calibration requires using an accurate frequency meter in parallel with the input signal.

UNDER FREQUENCY

1. Remove the cover.
2. Set the SENSE FREQUENCY to the nominal system frequency. Adjust the Under Frequency TRIP SET fully clockwise (CW) and the TIME DELAY control fully counterclockwise (CCW).
3. Apply the desired trip frequency to the relay.
4. Slowly adjust the TRIP SET control CCW until the relay trips.
5. Set the TIME DELAY control to the desired time delay and apply nominal frequency to the relay.
6. Step down the applied frequency from nominal to just below the trip level set in Step 4 and measure the time delay.
7. Adjust the TIME DELAY and repeat steps 5 and 6 until the desired time delay is set.

OVER FREQUENCY

1. Remove the cover.
2. Set the SENSE FREQUENCY to the nominal system frequency. Adjust the OF TRIP SET and TIME DELAY controls fully counterclockwise (CCW).
3. Apply the desired trip frequency to the relay.
4. Slowly adjust the TRIP SET control clockwise (CW) until the relay trips.
5. Set the TIME DELAY control to the desired time delay and apply nominal frequency to the relay.
6. Step down the applied frequency from nominal to just below the trip level set in Step 4 and measure the time delay.
7. Adjust the TIME DELAY and repeat steps 5 and 6 until the desired time delay is set.

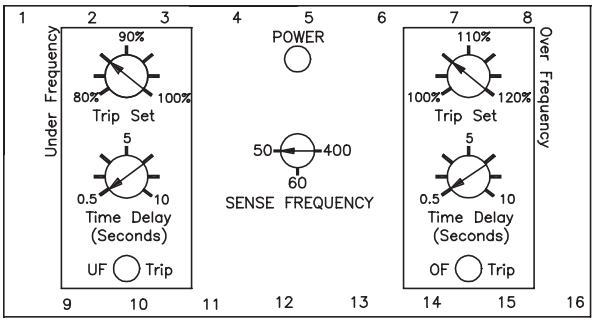

Sense Frequency

Frequency (nominal)	50	60	400
UF Adjustment Range	40-50	48-60	360-400
OF Adjustment Range	50-60	60-72	400-480

WUV/WOV DC Series

Product Facts

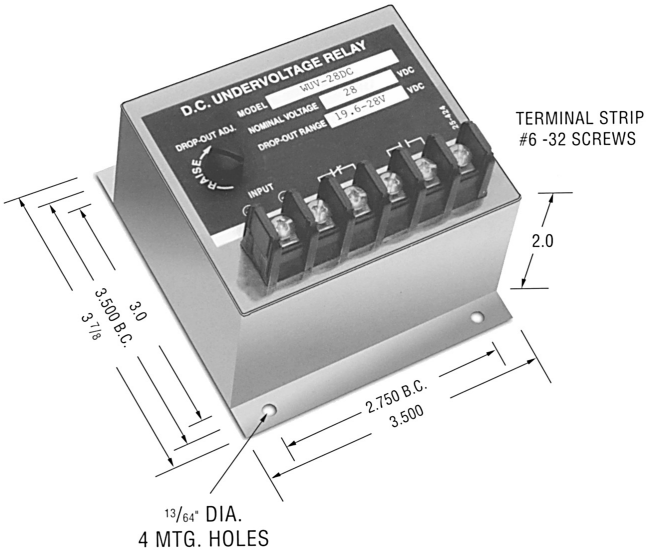

- **ANSI/IEEE C37.90-1978**

Undervoltage Models

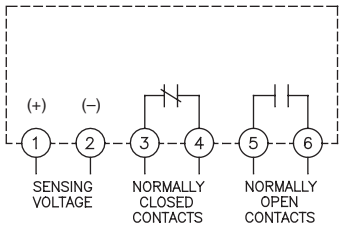

The relay is energized at normal voltage, N.C. contacts will open and N.O. contacts will close. The relay will de-energize when the voltage drops below the U/V set point.

Overvoltage Models

The relay is de-energized at normal voltage, N.C. contacts are closed and N.O. contacts are open. The relay will energize, when the voltage rises above the O/V set point.

Note: Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

Product Specifications

Nominal Voltage — 12 VDC to 560 VDC

Drop-out Point (u/v models) — 70-100% of nominal voltage, screwdriver adjustable

Pick-Up Point (o/v models) — 100-125% of nominal voltage, screwdriver adjustable

Output Contacts — One set N.O., One set N.C.

Contact Ratings — 5 amp resistive at 120 VAC or 28 VDC

Operating Temperature Range — -40˚C to +75˚C

Temperature Effects — Less than 1% voltage drift over the temperature range

Power Consumption —
12 to 60 VDC models — 1 W max.
120 to 305 VDC models — 2 W max.
405 to 470 VDC models — 3 W max.
560 VDC model — 4 W max.

Time Delay — A short duration delay is provided to prevent nuisance tripping due to momentary dips or surges in voltage. The drop-out delay, following a voltage fault is 75 to 100 milliseconds.

Notes:

1. Remove black screws for access to the O/V and U/V trip adjustment.
2. Clockwise rotation of the adjustment potentiometer will raise the voltage trip point.
3. The adjustments are by means of a single turn potentiometer. Use a small screwdriver and do not force beyond the limit stops.

Time Curves DC Overvoltage Relays

Transient Protection — All voltage relays will withstand momentary voltage surges of twice the nominal rated input voltage (standard).

Option "P" provides additional transient protection which complies with the requirements of ANSI/IEEE C37.90-1978

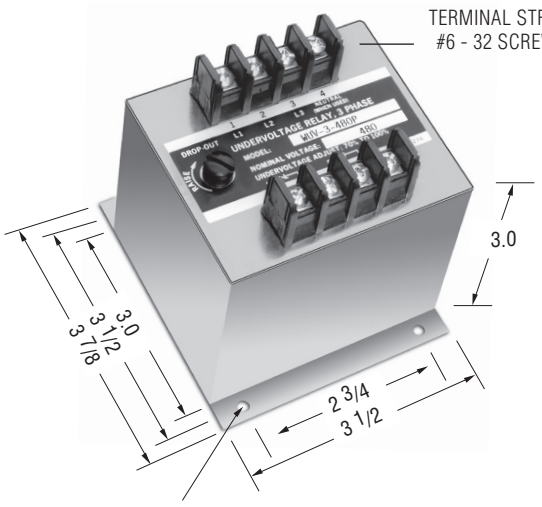

Consult factory for additional models.

WUV/WOV Series

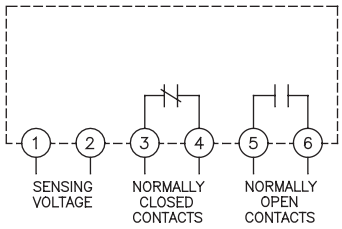

Product Facts

- Function 27/59
- ANSI/IEEE C37.90-1978
- UL File No. E58048
- CSA File No. LR61158

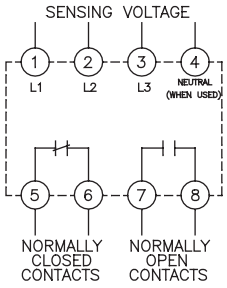

Voltage sensitive relays are available for both AC and DC applications for over/undervoltage protection. Combination over/undervoltage relays provide bandpass capabilities. AC relays are either single or three-phase type. Three phase models are designed to sense the average of the three phases or the highest single phase. Voltage trip points are screwdriver adjustable, and operation is time-delayed so that momentary voltage transients will not cause nuisance tripping.

Note: Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

Pick-up to Drop-out Differential — 1% typical

Drop-out Point (u/v models) — 70-100% of nominal voltage, screwdriver adjustable

Pick-Up Point (o/v models) — 100-125% of nominal voltage, screwdriver adjustable

Output Contacts — One set N.O., One set N.C.

Contact Ratings — 5 amp resistive at 120 VAC or 28 VDC

Operating Temperature Range — -40˚C to +70˚C

Power Consumption — 3 VA maximum

Time Delay — 0.5 to 20 seconds, screwdriver adjustable

Voltage Reset — The reset is automatic when voltage returns to normal.

Notes:

1. Remove black screws for access to the voltage and time delay adjustment potentiometer.
2. Clockwise rotation of the voltage adjust potentiometer will raise the voltage trip point.
3. Clockwise rotation of the time adjust potentiometer will increase the time delay (Pick-up time for O/V models, drop-out time for U/V models).
4. The adjustments are single turn potentiometers, use a small screwdriver and do not force beyond the limit stops.
5. On U/V models, when the voltage falls to approximately 33% of nominal or below, the relay will drop out in 0.150 to 0 .300 seconds, regardless of the time delay setting.

Transient Protection — All voltage relays will withstand momentary voltage surges of twice the nominal rated input voltage (standard).

Option "P" provides additional transient protection which complies with the requirements of ANSI/IEEE C37.90-1978

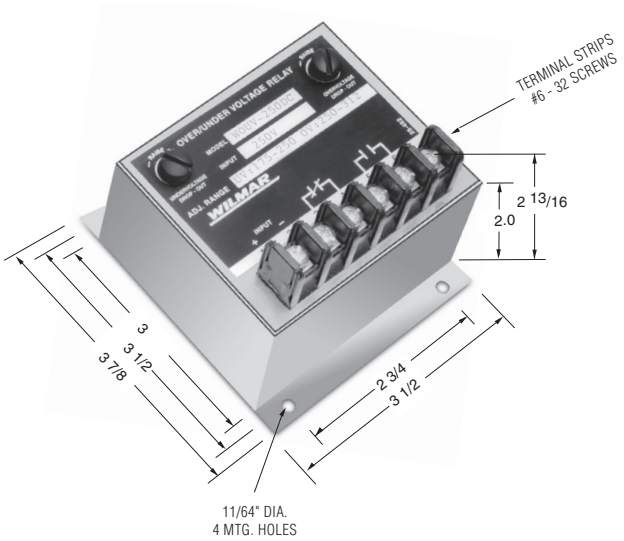

Consult factory for additional models.

WOUV DC Series, Over/Undervoltage

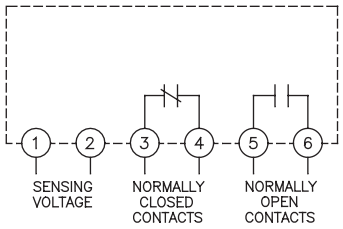

Product Facts

- **ANSI/IEEE C37.90-1978**

The relay will energize at normal voltage conditions. The normally open contacts will close, and the normally closed contacts will open. The relay will de-energize during over or undervoltage conditions. Reset is automatic when the voltage returns to normal.

Note: Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

Single Phase

Product Specifications

Nominal Voltage (±10%) — 12 VDC to 560 VDC

Drop-out Point (u/v models) — 70-100% of nominal voltage, screwdriver adjustable

Pick-Up Point (o/v models) — 100-125% of nominal voltage, screwdriver adjustable

Output Contacts — One set N.O., One set N.C.

Contact Ratings — 5 amp resistive at 120 VAC or 28 VDC

Operating Temperature Range — -40˚C to +75˚C

Temperature Effects — Less than 1% voltage drift over the temperature range.

Power Consumption — 12 to 60 VDC models — 1 W max. 120 to 305 VDC models — 2 W max. 405 to 470 VDC models — 3 W max. 560 VDC Model — 4 W max.

Time Delay — A short duration delay is provided to prevent nuisance tripping due to momentary dips or surges in voltage. The drop-out delay, following a voltage fault is 75 to 100 milliseconds

Notes:

1. Remove black screws for access to the O/V and U/V trip adjustment.
2. Clockwise rotation of the adjustment potentiometer will raise the voltage trip point.
3. The adjustments are by means of a single turn potentiometer. Use a small screwdriver and do not force beyond the limit stops.

P = Transient Protection

Drop-Out Time Delay WOUV...DC Series

Transient Protection — All voltage relays will withstand momentary voltage surges of twice the nominal rated input voltage (standard).

Option "P" provides additional transient protection which complies with the requirements of ANSI/IEEE C37.90-1978

Consult factory for additional models.

WOUVT Series, Over/Undervoltage

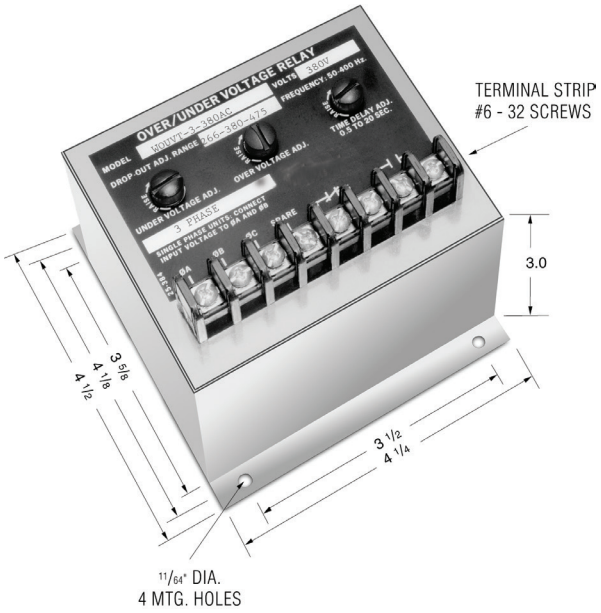

Product Facts

- **Function 27/59**
- **ANSI/IEEE C37.90-1978**

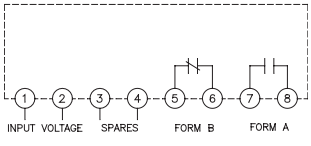

Voltage sensitive relays are available for both AC and DC applications for overvoltage and undervoltage protection. Combination over/undervoltage relays provide band-pass capabilities. AC relays are either single or three-phase type. Three phase relays are designed to sense the average of the three phases. Voltage trip points are screwdriver adjustable, and operation is time-delayed so that momentary voltage transients will not cause nuisance tripping.

Operation

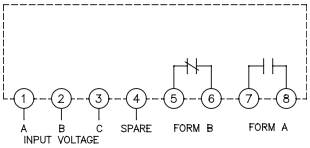

The relay will energize at normal voltage condition. The normally closed contact (Form B) will open and the normally open (Form A) will close. The relay will de-energize after time delay when over or undervoltage condition is reached.

Note: Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

Single Phase Models

Three Phase Models

Product Specifications

Nominal Voltage — 120 VAC to 575 VAC

Phase — Single or Three

Line Frequency — 50-400 Hz

Type of Sensing — Average of all three phases

Undervoltage Trip — 70-100% of nominal voltage, screwdriver adjustable

Overvoltage Trip — 100-125% of nominal voltage, screwdriver adjustable

Drop-out Time Delay — 0.5 to 20 seconds, screwdriver adjustable

Pick-up to Drop-out Differential — 2% maximum

Output Contacts — One set N.O., One set N.C.

Contact Ratings — 5 amp resistive at 120 VAC or 28 VDC

Operating Temperature Range — -40˚C to +70˚C

Power Consumption — 4 VA maximum

Notes:

1. Remove black screw for access to the voltage trip and time delay adjustment potentiometer.
2. Clockwise rotation of the voltage adjustment potentiometer will raise the voltage trip point.
3. Clockwise rotation of the time adjustment potentiometer will increase the drop-out time delay.

Option "H" provides for contacts rating of 3 amps @ 125VDC.

Option "P" provides additional transient protection which complies with the requirements of ANSI/IEEE C37.90-1978

Consult factory for additional models.

250 Series, Over/Undervoltage

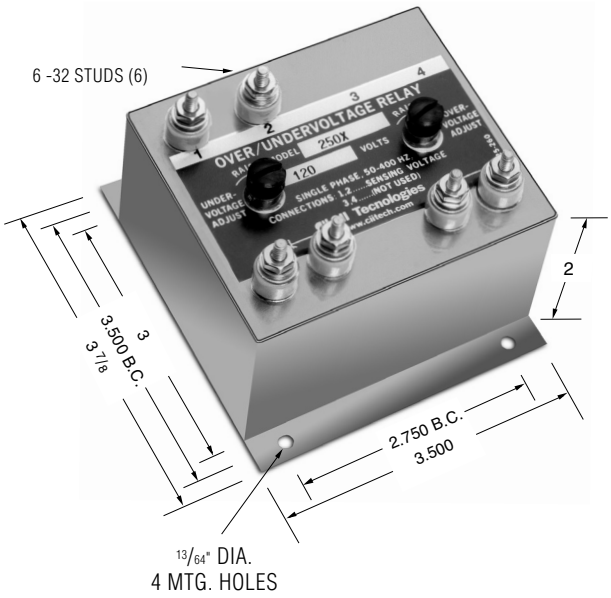

Product Facts

- **Function 27/59**
- **ANSI/IEEE C37.90-1978**

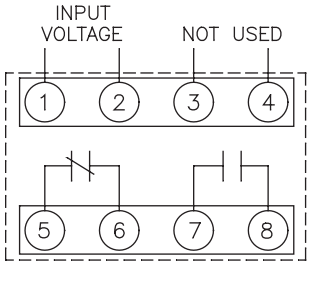

The 250 series relays provide combined Overvoltage and Undervoltage protection in a single compact unit.

Models are available for single phase or three phase applications, and are suitable for either 50 Hz, 60 Hz, or 400 Hz operation. The trip point is adjustable.

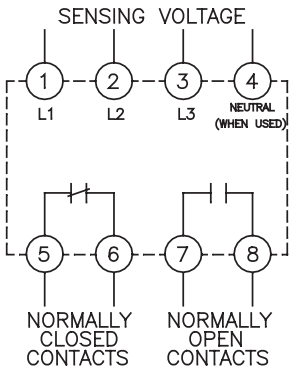

A transistorized circuit provides a sharp and accurate response at the preset tripping voltage; unaffected by temperature or frequency variations.

Note: Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

Single Phase

Three Phase

Ordering Information

Sample Part Number ▶ **250X**

Model: L-L Volts

250X = 120 VAC, 1 Phase, 50-400 Hz
251X = 120/208 VAC, 3 Phase, 4 Wire, 50-400 Hz
252X = 115 VAC, 3 Phase, 3 Wire, 50-400 Hz
253X* = 230 VAC, 3 Phase, 3 Wire, 50-400 Hz
254X* = 380 VAC, 3 Phase, 3 Wire, 50-400 Hz
255X*= 460 VAC, 3 Phase, 3 Wire, 50-400 Hz
256X* = 575 VAC, 3 Phase, 3 Wire, 50-400 Hz

Mounting

Blank = Stud
X = Flange

* Enclosure height is 3.835"

Product Specifications

Nominal Voltage — See Ordering Information

Undervoltage Trip — 70-100% of nominal voltage, screwdriver adjustable

Overvoltage Trip — 100-125% of nominal voltage, screwdriver adjustable

Pick-up to Drop-out Differential — 3% maximum

Contact Ratings — 5 amp resistive at 120 VAC or 28 VDC

Contact Form — One set N.O., one set N.C.

Operating Temperature Range — -20˚C to +85˚C

Notes:

1. Remove screws for access the overvoltage or undervoltage trip adjustments. Clockwise rotation of the adjustment potentiometer will raise the trip point.

Contact Arrangements

NC — Open at nominal voltage. Closed at Overvoltage and Undervoltage

NO — Closed at nominal voltage. Open at Overvoltage and Undervoltage

Consult factory for additional models.

D100X Series, Close Differential

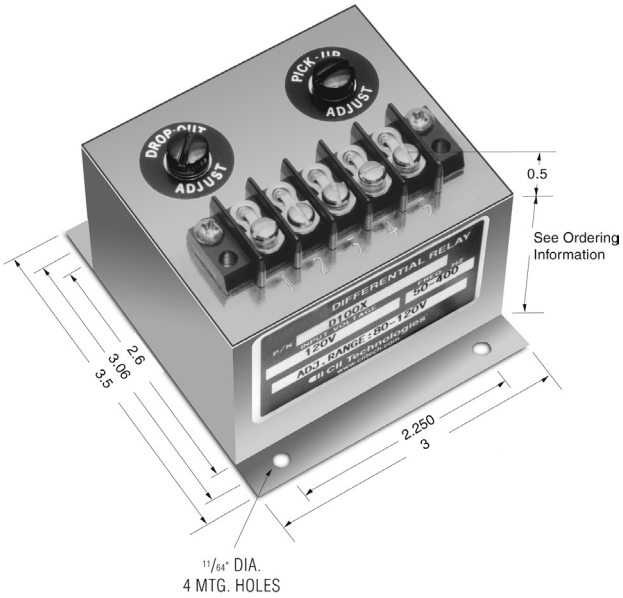

Product Facts

- ANSI/IEEE C37.90-1978
- UL File No. E58048
- CSA File No. LR61158

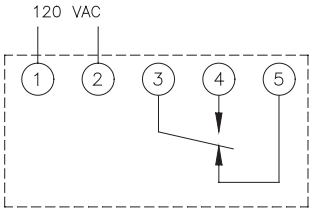

Close Differential Relays are voltage sensitive. The pick-up and drop-out voltage settings are independently adjustable, which allows precise setting of the differential voltage. This relay is available in a wide range of AC and DC voltages. Their primary application is the sensing and control of transfer switches.

Operation

Monitors a single phase AC signal, and is used for undervoltage detection. Has separate pick-up and drop-out voltage settings, providing an adjustable hysteresis.

Note: Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

Product Specifications

Nominal Voltage — AC, Single Phase, see Ordering Information

Nominal Frequency — 50 to 400 Hz.

Pick-Up Adjustment Range — 67-100% of nominal voltage

Drop-Out Adjustment Range — 67-100% of nominal voltage

Maximum Differential Setting — 33% of nominal voltage

Minimum Differential Setting — 2% of nominal voltage

Output Contacts — Form C (SPDT)

Contact Ratings — 5 Amp resistive at 120 VAC or 28 VDC

Operating Temperature Range — -20˚C to +85˚C

Expected Life — 10 million operations

Inverse Time Drop-Out — The differential relay contains a time delay before operation so that momentary voltage transients do not affect the operation of the relay. The time delay has an inverse time characteristic so that excessive voltage conditions will cause a more rapid drop-out. This time delay is approximately 200mSec. (12 cycles) at the trip settings and decreases to 30 mSec. at approximately 15% beyond the trip settings.

Notes:

1. Remove black nylon protective screws to gain access to the two internal adjustment potentiometers.
2. Clockwise rotation of the pick-up and drop-out adjustment will raise the voltage trip point.
3. The relay contacts are shown in the de-energized state.

Ordering Information

Sample Part Number ▶ D100X

Surge Withstand Capability is in compliance with the requirements of ANSI/IEEE C37.90B

Consult factory for additional models.

D101X Series, 3 Phase Adjustable, Close Differential

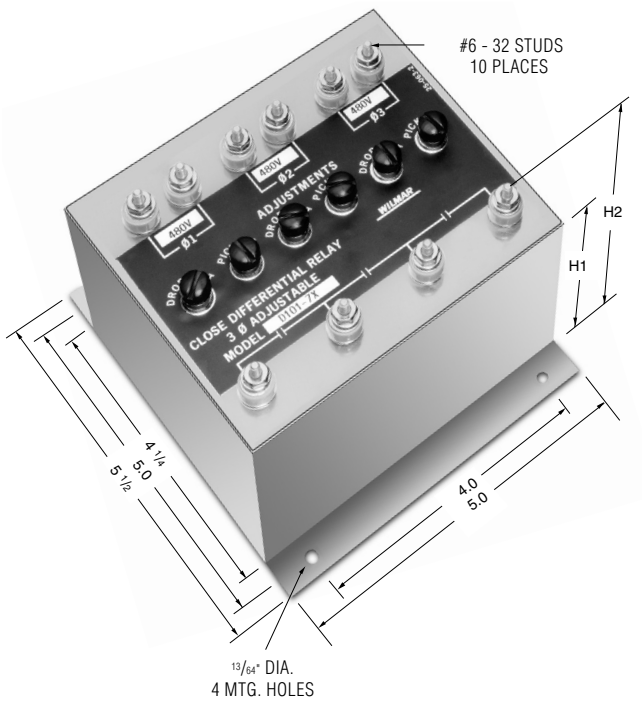

Product Facts

- ANSI/IEEE C37.90-1978
- UL File No. E58048
- CSA File No. LR61158

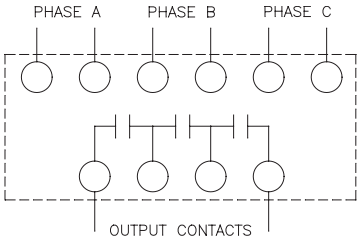

Close Differential Relays are voltage sensitive. The pick-up and drop-out voltage settings are independently adjustable, which allows precise setting of the differential voltage. This relay is available in a wide range of AC voltages. Their primary application is the sensing and control of transfer switches.

Operation

The output contacts will close when the voltage of all three phases is above the pre-set pick-up point, and will open when any one phase drops below its drop-out setting.

Note: Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

Product Specifications

Nominal Voltage — AC, Three Phase, see Ordering Information

Nominal Frequency — 50 to 500 Hz.

Pick-Up Adjustment Range — 66-100% of nominal voltage, screwdriver adjustable

Drop-Out Adjustment Range — 66-100% of nominal voltage, screwdriver adjustable

Output Contacts — SPNO

Contact Ratings — 5 amp resistive at 120 VAC or 28 VDC

Operating Temperature Range — -20˚C to +85˚C

Notes:

1. Remove screws for access to pick-up and drop-out trip adjustments.
2. Clockwise rotation of the pick-up and drop-out adjustment will raise the voltage trip point.

700 Series w/ Adjustable Time Delay

Product Facts

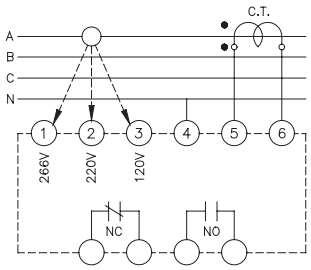

- Function 32
- ANSI/IEEE C37.90-1978
- UL File No. E58048
- CSA File No. LR61158

Several types of Reverse Power Relays are available including relays sensitive to reverse reactive power (kVAR). KILOVAC is the leading brand of reverse power relays. Our rugged sealed construction provides continuous and reliable operation unaffected by shock, vibration or other severe environments. Reverse Power Relays are used for the protection of generator sets operating in parallel.

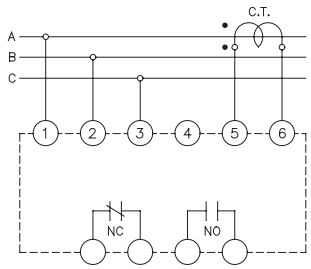

Note: Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

Model 710TD

Designed for 120, 220 or 266 volt line to neutral connection

Model 720TD (X) thru 724TD (X)

For operation on three phase, three wire

Product Specifications

Line Voltage —
Model 710TD — 120 V, 220 V or 266 V, line to neutral
Model 730TD — 120 V, 230 V, 380 V, 460 V, L-L, 3 Phase or 120 V, Single Phase, L-N
All models for three phase, three wire sensing are available, see Ordering Information

Line Frequency — 50-500 Hz.

Current Requirements —
0 to 5 amp max direct or from CT with 5 amp secondary

Trip Adjustment —
Screwdriver adjustable 4% to 20% (of the 5 amp rating)

Time Delay Adjustment — 0.5 to 20 seconds, screwdriver adjustable

Output Contacts — One set N.O., one set N.C.

Contact Ratings — 5 amp resistive at 120 AC or 28 Vdc

Power Consumption —
Voltage circuit — 2 VA max.
Current circuit — 4 VA max.

Weight — 2.75 lbs. max.

Notes:
1. Remove screw for access to the pick-up and time delay adjustments.
2. Clockwise rotation of the pick-up adjustment will raise the reverse trip point.
3. Clockwise rotation of the time adjustment will increase the time delay.
4. Polarity of the voltage and the current connections must be observed for true power sensing.
5. Interchanging connections on terminals 5 and 6, will cause the output contacts to pick-up on forward power and dropout on no power or reverse power.

Consult factory for additional models.

1000 Series

Product Facts

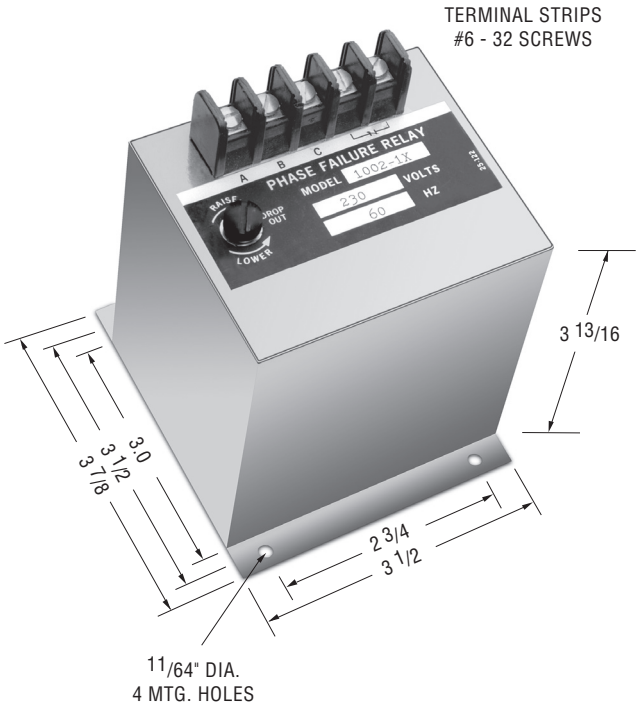

- Function 47
- ANSI/IEEE C37.90-1978
- UL File No. E58048
- CSA File No. LR61158

Phase failure relays protect motors, equipment and personnel from damage or injury caused by open phase, reversed phase sequence, or low voltage in a three phase system. Models are available for 50 and 60 Hz with voltages up to 575 volts. Motor control switchboards are a common application.

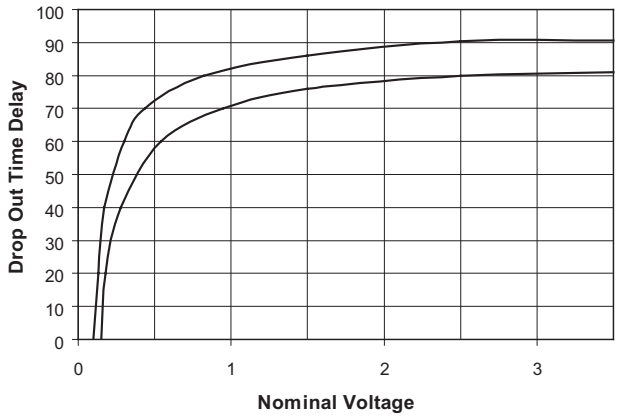

Operation

The contacts of the relay will close only when it senses normal conditions of three phase power at the proper phase sequence.

The relay contacts will remain in their normally open position (de-energized) when voltage with incorrect phase sequence is applied, one or more phases are open, or at undervoltage condition.

Note: Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

Product Specifications

Nominal Voltage — See Ordering Information

Voltage Drop-Out — 75% to 100% of nominal, screwdriver adjustable

Pick-Up to Drop-Out Differential — 3% approx.

Ambient Operating Temperature — -40°C to +70°C

Temperature Drift — ± 1%

Time Delay — See Curve

Output Contacts — One set, normally open

Contact Ratings —
10 amp at 28 VDC resistive
10 amp at 230 VAC resistive

Notes:
1. Remove screw for access to the undervoltage adjustment.
2. Clockwise rotation of the adjustment potentiometer will raise the drop-out voltage.

Ordering Information

1004 = 460 V, 60 Hz, 3 phase,L-L
1005 = 525 V, 60 Hz, 3 phase,L-L
1006 = 575 V, 60 Hz, 3 Phase, L-L

Mounting:
X = Flange
Blank - Stud

Consult factory for additional models.

900 Series

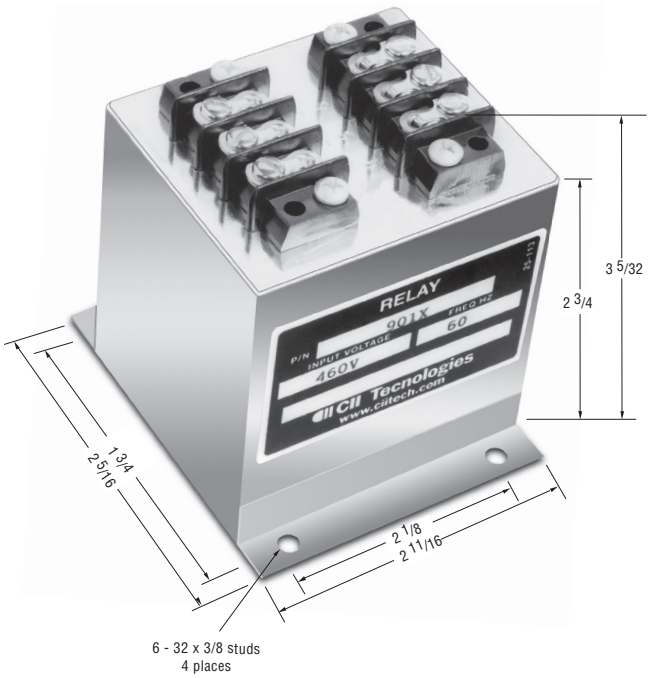

Product Facts

- **Function 47**

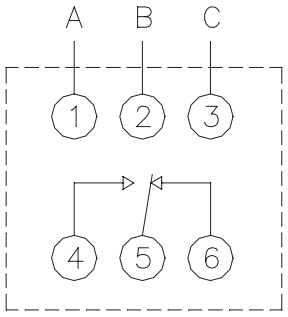

Phase sequence relays are designed to monitor the correct phase rotation of a three phase system. Several models are available from 50 Hz, 60 Hz, and 400 Hz with voltages up to 575 volts. High shock relay output and reverse contacts are also available.

Operation

The relay remains de-energized when voltage in the proper phase sequence (A, B, C) is applied, the relay is energized when voltage with incorrect sequence (A, C, B) is applied.

Note: Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

Product Specifications

Input Voltage — See Ordering Information

Output Contacts — SPDT

Contact Ratings — 5 amp resistive at 120 Vac or 28 Vdc

WCB Series

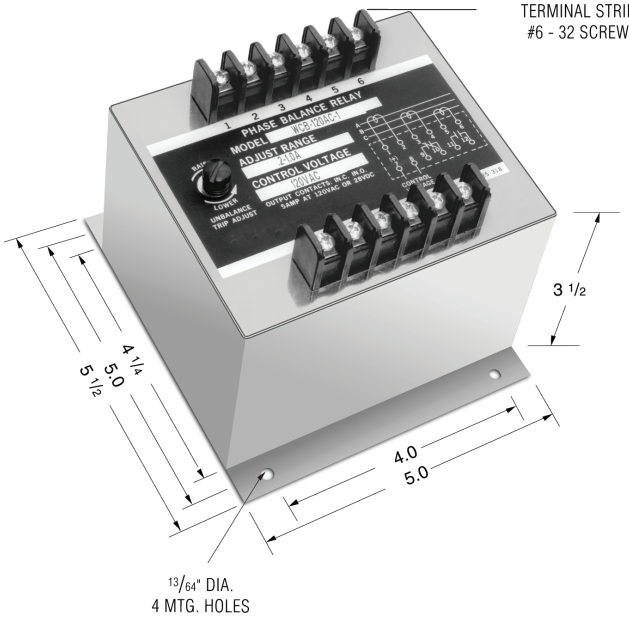

Product Facts

- Function 60 or 87
- ANSI/IEEE C37.90-1978
- UL File No. E58048
- CSA File No. LR61158

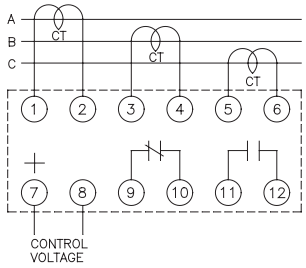

Current Balance Relays are designed to sense unbalanced current flow in a three phase system. The primary application of Current Balance Relays is to protect three phase motors against phase unbalance or phase failure.

Operation

With control voltage applied to the relay, the output contacts will energize when the three phase currents are balanced (including zero currents), and will be de-energize by unbalance currents.

Note: Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

Product Specifications

Line Current — Three Phase, AC current, 50-400 Hz Direct or from CT.
5 amp continuously
20 amp, 30 sec.
200 amp, 0.10 sec.

Control Voltage — See Ordering Information

Unbalanced Trip Point — Screwdriver adjustable. Adjustment range in accordance with ordering information. (The unbalanced value is defined as the difference between the highest and the lowest phase current).

Drop-Out Time Delay — 0.9 to 1.3 seconds

Surge Withstand Capability — In compliance with C37.90B ANSI/IEEE

Operating Temperature — -40°C to +70°C

Burden — Current input — 5.0 VA, Phase Control voltage — 3.0 VA

Contact Ratings — One set, N.O., One set N.C. 5 amp resistive at 120 VAC or 28 VDC

Notes:
1. Remove black screw for access to the trip adjustment.
2. Clockwise rotation of the adjustment potentiometer will raise the unbalance trip point.
3. The output contacts are shown de-energized.

WC1 & WCT1 Series, Overcurrent

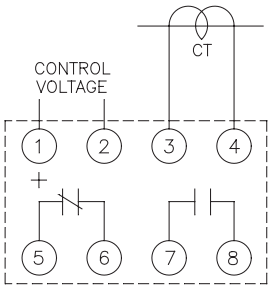

Product Facts

- **Function 50/51**
- **ANSI/IEEE C37.90-1978**
- **UL File No. E58048**
- **CSA File No. LR61158**

Current sensitive relays are available for single and three phase applications. Voltage controlled overcurrent relays protect generators against fault currents below the full rated value, when the fault produces a voltage drop as in the case of short circuits or grounds. Phase balance relays are available to sense and control unbalanced current flow in three phase systems. Current differential relays operate when the differential between two currents exceeds preset values. Over/under current phase-band relays are also available.

Note: Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

Time Delay

Standard Time Delay (WC1 Series) — A fixed inverse time delay is incorporated in all overcurrent relays and is represented by the typical curves shown.

Adjustable Time Delay (WCT1 Series) — The time delay is field adjustable. The standard time delay can be increased by any value between 0.5 and 20 seconds.

Product Specifications

Line Current — Single Phase, AC current, 50-400 Hz Direct or from CT

Control Voltage — See Ordering Information

Trip Point — Screwdriver adjustable. Adjustment range in accordance with ordering information.

Pick-Up to Drop-Out Differential — Approximately 0.1 amp.

Overcurrent Allowance — Maximum of 500% for 0.25 seconds

Surge Withstand Capability — In compliance with C37.90B ANSI/IEEE

Operating Temperature — -40°C to +70°C

Temperature Drift — ± .05%

Burden — Current input — 1.2 VA, Control voltage — 2.5 VA

Contact Ratings — One set, N.O., One set N.C. 5 amp resistive at 120 VAC or 28 VDC

Notes:

1. Remove black screws for access to the current pick-up and the time delay adjustment.
2. Clockwise rotation of the pick-up adjustment will raise the current trip point.
3. Clockwise rotation of the time delay adjustment, (Type WCT1 only) will increase the time delay.

WCD Series

Product Facts

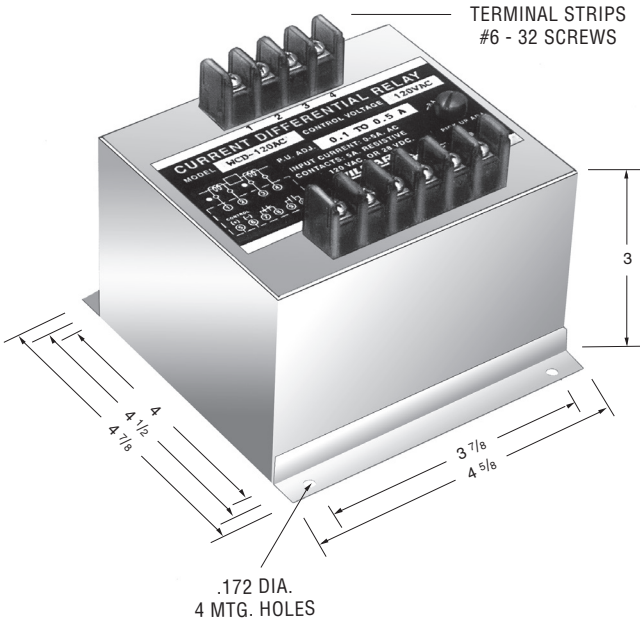

- **Function 87**
- **ANSI/IEEE C37.90-1978**

Current Differential Relays are used for the protection of transformers, motors and generators, by comparing the magnitude of the current entering and leaving the protected circuit. On a given phase winding, any difference between the two currents will indicate an internal fault; the relay will sense the vectorial difference between the two currents of the protected section and will initiate a quick disconnection of the unit, to prevent disastrous consequences.

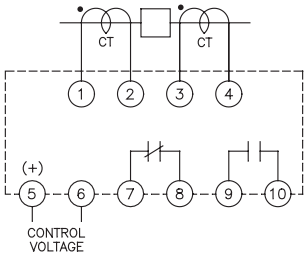

The relay may also be used to protect internal faults on transformers, such as: ground faults, shorted winding, leakage between primary and secondary, etc. It will sense and compare primary vs. secondary currents, once the turns ratio has been taken into consideration.

Operation

With control voltage applied, the output contacts (shown in the de-energized position) will remain de-energized as long as the difference between the two input currents remains below the preset trip value. The contact will transfer to the energized position when the current difference exceeds the trip value.

Note: Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

Product Specifications

Line Current —
Single Phase, AC current, 50-400 Hz
Direct or from CT

380AC	
416AC	
460AC	
525AC	
575AC	

Trip Adjustment Range
.5 = 0.1 amp to 0.5 amp
1 = 0.2 amp to 1 amp
2 = 0.4 amp to 2 amp

Options:
A = Two normally open contacts
B = Two normally closed contacts
H = Contacts rated 3 amp at 125 VDC
P = Transient protection is provided in compliance with ANSI/IEEE C37.90-1978

Consult factory for additional models.

1800 Series

Product Facts

- **Function 25**
- **ANSI/IEEE C37.90-1978**
- **UL File No. E58048**
- **CSA File No. LR61158**

Application

These relays are designed for automatic paralleling (synchronizing) of generators. The relays sense the phase angle displacement and the amplitude difference between two voltages and permit paralleling only when both voltages are equal and in phase. A short time delay is provided to assure that the frequencies are essentially the same at the moment of paralleling. The basic series is designed to parallel two or more energized AC generators. The "Dead Bus" type provides paralleling of AC generators to the main bus. They permit electrical connection of an energized generator to an un-energized line (Dead Bus). If the bus is energized, connection of the generator to the bus is permitted only when both are synchronized.

Notes

*Permits paralleling of two generators only when they are "on-line" and their voltages are equal and in phase (synchronized)

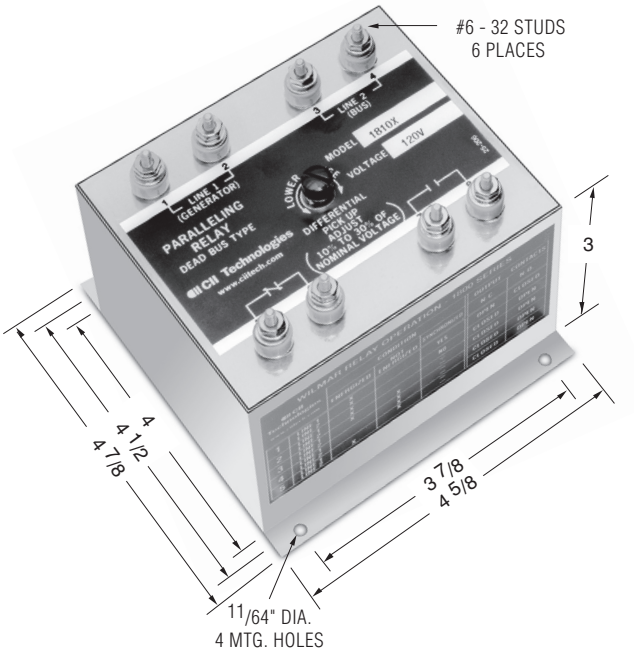

**Normally used to permit paralleling of a generator to a bus when: (a) both line voltages are equal and in phase, or: (b) when the generator is "on-line" and the bus is "dead"

***Permits paralleling of two power lines (buses) when: (a) both line voltages are equal and in phase, or: (b) when either bus is "hot" and the other bus is "dead"

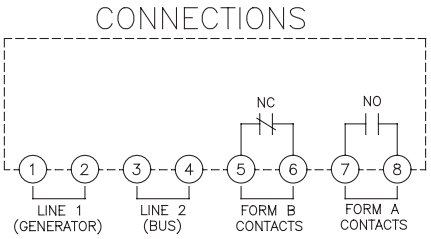

Output Contact Options —

1. Two Form A. (Add -A to Model Number)
2. Two Form B. (Add -B to Model Number)

Consult factory for additional models.

Note: Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

Product Specifications

Sensing Voltage — 120 V, 230 V, 277 V, 380 V, 460 V, 575 V, & 415 V

Line Frequency — 50-500 Hz

Pick-Up Adjustment — External adjustment for field sensing of 10-30% of nominal input voltage. (Vertical voltage differential of 6 to 18 electrical degrees).

Time Delay — Fixed @ 60 milliseconds is provided to assure that the frequencies of both input lines are sufficiently close to permit paralleling within the preset window.

Output Contacts — One set N.O., one set N.C. 5 amp resistive at 120 VAC or 28 VDC

A. 3 Phase, 4 Wire System
Connect phase "A" of LINE 1 to terminal 1
Connect phase "A" of LINE 2 to terminal 3
Connect the neutrals to terminals 2 & 4

B. 3 Phase, 3 Wire or 1 Phase, 2 Wire System
Connect phase "A" of LINE 1 to terminal 1
Connect phase "B" of LINE 1 to terminal 2
Connect phase "A" of LINE 2 to terminal 3
Connect phase "B" of LINE 2 to terminal 4

WOF & WUF Series

Product Facts

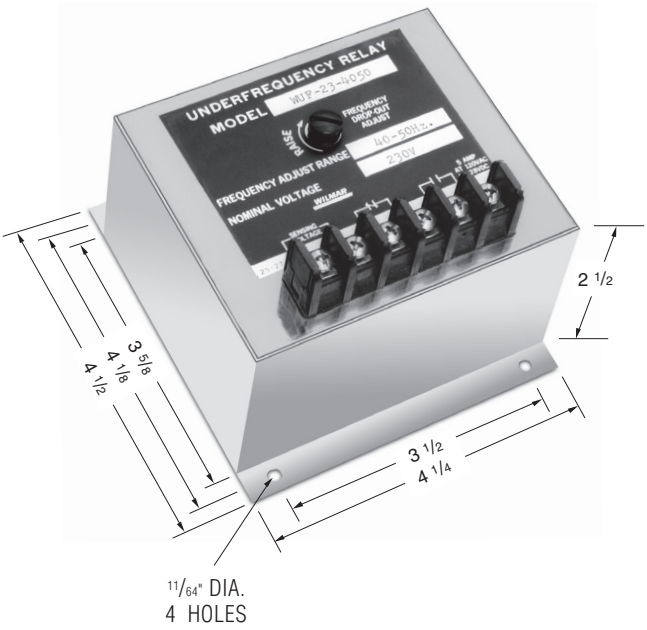

- Function 81 O/U
- ANSI/IEEE C37.90-1978
- UL File No. E58048
- CSA File No. LR61158

Application

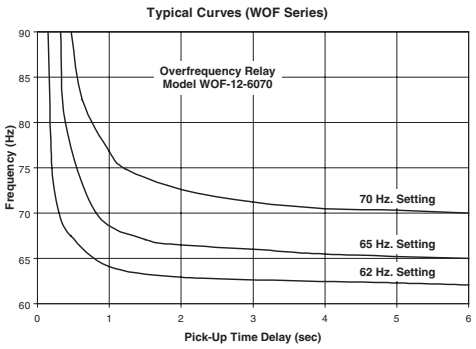

The output contacts of frequency relays are energized when the frequency exceeds the adjustable set point. Overfrequency and underfrequency relays are available in 50, 60 and 400Hz. Combination over/underfrequency "band pass" relays are also available. These are energized at rated frequency and de-energized during overfrequency or underfrequency conditions. Frequency Differential relays are energized above the preset frequency. The pick-up and drop-out frequency settings are independently adjustable.

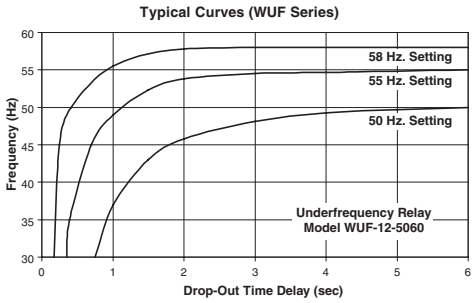

Consult factory for additional models.

Note: Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

Ordering Information

Sample Part Number ▶ **WUF -12 -5060 -T**

Type:
WUF = Underfrequency
WOF = Overfrequency

Input Voltage (VAC)
12 = 120
23 = 230
38 = 380
46 = 460

Frequency Range
4050 = 40-50 HZ
5060 = 50-60 HZ
6070 = 60-70 HZ
3540 = 350-400 HZ
4045 = 400-450 HZ (overfrequency only)

Time Delay Options
blank = Per Time Curve
T = Adjustable

Product Specifications

Nominal Voltage (±20%) — 120, 230, 380 and 460 volts

Nominal Frequencies — 50, 60 and 400 Hz.

Trip Point — Screwdriver adjustable. Adjustment range in accordance with ordering information.

Operating Temperature — -20°C to +65°C

Differential — The frequency pitch-up to drop-out differential is .5% max

Voltage Drift — ± .05% maximum frequency error for input voltage variation of ±10%

Time Delay — See Time versus Frequency curves

Surge Withstand Capability — In compliance with C37.90B ANSI/IEEE

Output Contacts — One set N.O., one set N.C.

Contact Ratings — 5 amp resistive at 120 VAC or 28VDC

Time Delay

Standard Time Delay — A minimum, fixed inverse time delay is incorporated in all frequency relays to prevent nuisance tripping and is represented by the typical curves shown above.

Adjustable Time Delay — If additional time delay is required, a suffix "T" must be added to the part number. This allows the minimum fixed time delay to be field-adjustable up to 20 seconds.

Notes:
1. Remove black screws for access to the frequency and the time adjustments.
2. Clockwise rotation of the frequency potentiometer will raise the frequency trip point.
3. Clockwise rotation of the time adjustment, option "T" will increase the time for overfrequency relays and dropout time for underfrequency relays.

WOUF Series, Over/Underfrequency

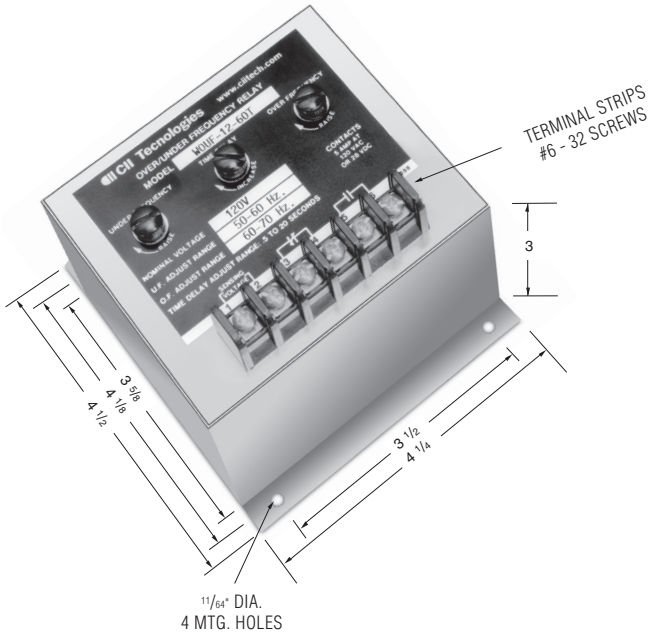

Product Facts

- Function 81 O/U
- ANSI/IEEE C37.90-1978
- UL File No. E58048
- CSA File No. LR61158

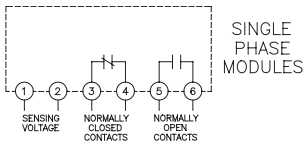

The output contacts of frequency relays are energized when the frequency exceeds the adjustable set point. Overfrequency and underfrequency relays are available in 50, 60 and 400Hz. Combination over/underfrequency "band pass" relays are also available. These are energized at rated frequency and de-energized during overfrequency or underfrequency conditions. Frequency Differential relays are energized above the preset frequency. The pick-up and drop-out frequency settings are independently adjustable.

Operation

The relay will energize at normal frequency; The normally closed contacts will open and the normally open contacts will close. The relay will drop-out after time delay at overfrequency or underfrequency.

Note: Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

Ordering Information

Sample Part Number ▶ **WOUF -12 -5060 -T**

WGD Series — Floating Ground

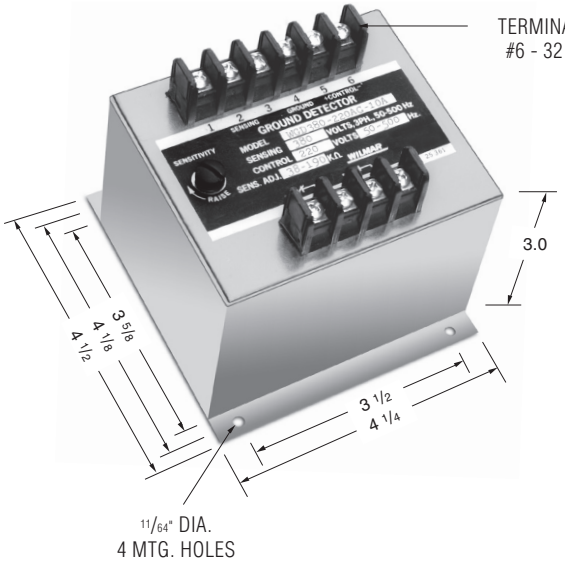

Product Facts

- ANSI/IEEE C37.90-1978
- UL file No. E58048
- CSA file No. LR61158

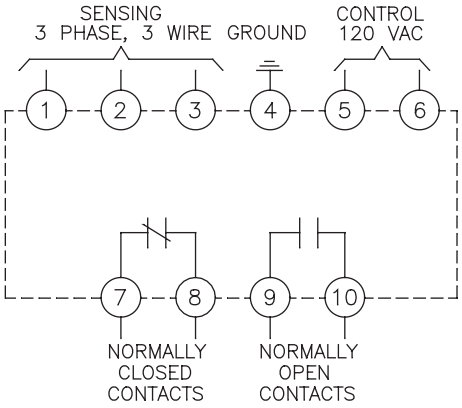

Ground Fault Detectors are used to sense leakage current to ground in power transformers and generators. They are available for both AC and DC systems. Some generator systems provide auxiliary power outlets for small equipment. TE Connectivity GFD's eliminate personnel risk of accessing these outlets if a ground fault exists. Diesel locomotives and railroad line signal boxes also use GFD's for operational control purposes. The GFD monitors both positive and negative grounds for fault currents and can trigger either notification or system shutdown if these are detected. GFD's are available for both grounded and ungrounded systems.

Operation

When the resistance between any phase to ground falls below the set point the relay will energize; The normally closed contacts will open, the normally open contacts will close.

Note: Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

Ordering Information

Sample Part Number ▶ WGD-

Type:	Volts L-L	Trip Point Adj. Phase to Ground
115-120AC	115	11-55KΩ

575-120AC	575	57-285KΩ
600-120AC	600	60-300KΩ

Product Specifications

Sensing Voltage (±10%) — 3 phase, 3-wire. See Ordering Information.

Control Voltage — 120 Volts AC

Contacts Trip Points (sensitivity) — Screwdriver adjustable. See Ordering Information.

Pick-up Time Delay — 1.5 seconds approximately

Contact Ratings — 5 amp resistive at 120 VAC or 28 VDC

Operating Temperature — -40°C to +65°C

Temperature Effects — ± 1% over temperature range

Power Consumption — Sensing: —2 mA/Phase Approx., Control — 2VA at 120VAC

Surge Withstand Capability — In accordance with the requirements of ANSI/IEEE

Notes:

1. Remove screw for access to the pick-up adjustment potentiometer.
2. Clockwise rotation of the adjustment potentiometer will raise the relay sensitivity.

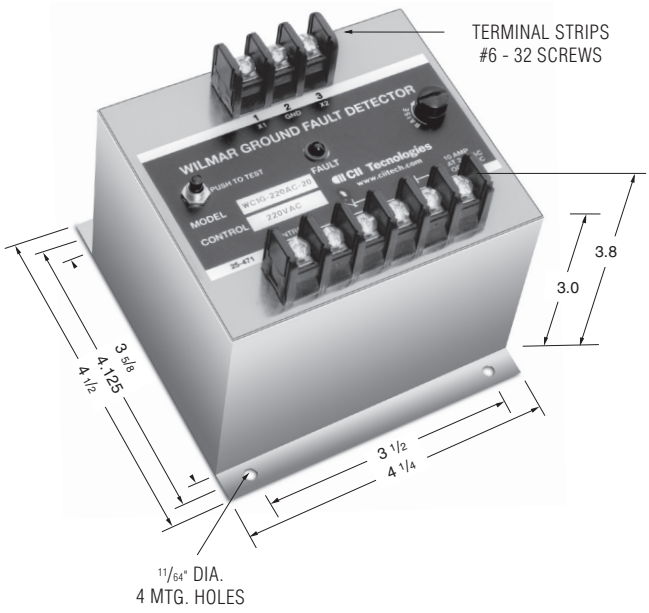

WC1G Series — Grounded

Ground Fault Detectors are designed to provide very sensitive Ground-Current protection for motor, equipment and personnel from damage or electrical shock. In a ground system, the leakage current is monitored through a toroidal or doughnut current transformer placed around the supply conductors to a motor, transformer, equipment or outlets. Since the sums of the current in a system add to zero, the relay is responsive only to ground-fault current.

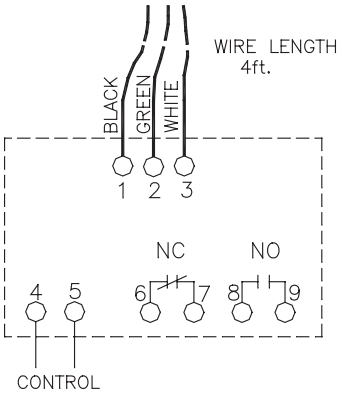

Operation

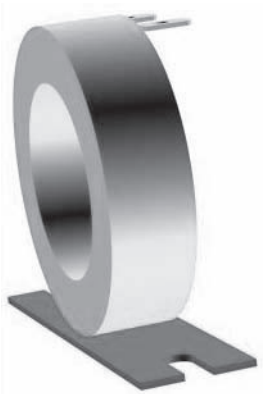

The output contacts are shown in de-energized position. They will change state when these conditions are met:

1. Control voltage is applied.
2. Leakage current exceed the trip setting.

Note: Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

Current Transformer

Product Specifications

CT Window Diameter — 1.7 inches (std) or can be specified by customer

Leakage Current Range — 10 to 60 mA

Control Voltage — See Ordering Information

Output Contacts — One set N.C., one set N.O.

Operating Temperature — 40°C to +65°C

Contact Ratings — 10 amp resistive at 250 Vac, 8 amp. resistive @ 30 Vdc

Notes:

1. Remove screw for access to the pick-up adjustment potentiometer.
2. Clockwise rotation of the adjustment potentiometer will raise the relay sensitivity.

301-17SX	120VAC, 3W, Sim to 301-13SX except 120V
301-18X	277/480VAC,4W,3 independent adjustments
301-19SX	94VAC, 3W, Similar to 301-17SX
301-20SX	86/150VAC, 4W, 90-120V Range, T.D., Solar
301-21X	460VAC, 3W, 125VDC Contacts
301-22X	277/480VAC, 4W, 323-425V Range (L-N)
301-23X	380VAC, 3 or 4W, 0.022 Sec. T.D.
301-25X	120/208V, 4W, 2-3 Sec. T.D.
301-26X	416VAC, 3 or 4W, 415-520V Range
301-27X	277/480VAC, 4W, 2-3 Sec. T.D.
301-28X	20.8VAC, 3W, 20-25V Range
301-29X	480VAC, 3 or 4W, Sim. to 301-3X with spike supp.
301-30SX	100VAC, 3W, 100-125V Range, hi-shock
301-31X	208-240, 3W, 200-280V Range, 45-65 Hz.
301-32X	400VAC, 3W, 400-500V Range
301-34X	208VAC, 3W, Set 240V, Withstand 600V contin.
301-35X	120VAC, 3W, 3-5 Sec. T.D.
301-37X	120VAC, 3W, Sim. to 301-8X with spike suppression
301-39X	138/240VAC, 3 or 4W, 2 Sec. T.D.
301-40X	120/208VAC, 4W, Highest of 3, Solar
301-41SX	450VAC, 3W, Navy Hi-Shock, 75VDC 3A Contacts
301-42X	120VAC, 3W, Highest of 3, 120-150V Range
301-45X	120/208VAC, 4W, Highest of 3, Adj. T.D.
301-46X	104VAC, 3W, Similar to WOV-3-104

Additional Relays (Continued)

301-47X	69/120VAC, 4W, 69-90V Range, 120V (L-N) Contin.
301-48X	380VAC, 3 or 4W, 380-500V Range
301-49X	250VAC, Withstand 520VAC Continuous
301-50X	180VAC, 3W, Similar to WOV-3-180
301-51X	120VAC, 3W, Supp, 10CFR Class1E (Nuclear)
301-52X	95VAC, 3W, 95-120V (L-L) Range
301-53X	115/200VAC, Similar to WOV-3-200, 1.0 Sec T.D.

AC, THREE PHASE, 400 HZ

303X	120/208VAC, 4W
303-1X	115/200VAC, 4W, Highest of 3, T.D., MIL-E-7894
303-1SX	115/200VAC, 3W, High Shock
303-2X	120/208VAC, 4W, High of 3, T.D., MIL-E-7894
303-3X	120/208VAC, Highest of 3, T.D.
303-4X	120VAC, 3W, 120-160V Range
303-8X	254/440VAC, 4W
303-9X	240/416VAC, 4W
303-10X	120/208VAC, 4W, 168V P.U., Kato
303-12X	120/208VAC, 4W, Fast Operating
303-13X	120/208VAC, 4W, 0 deg. C to 90 deg. C
303-15X	120/208VAC, Sim. to 303-13X with Latching Circuit
303-16X	120/208VAC, 303X with conformal coating

DC

310DCX	28VDC, 28-36V Range
310DC-HX	28VDC, 28-36V Range, 125VDC 2A Contacts
310DC-SX	28VDC, 28-36V Range, 2A Contacts, High Shock
310DC-2X	28VDC, 28-36V Range, T.D., MIL-E-7894 Fig. 2
310DC-3X	28VDC, 35-46V Range, T.D., MIL-E-7894
310DC-4X	28VDC, Set 31V, 2 Sec; 40V, 0.2 Sec.
311DCX	12VDC, 12-16V Range
311DC-1X	12VDC, 12-16V Range, 1V Differential
320DCX	60VDC, 60-85V Range
320DC-HX	60VDC, 60-85V Range, 125VDC 2A Contacts
320DC-1X	35-60VDC, Spike Suppression
320DC-2X	55-80VDC, Spike Suppression
320DC-4X	48VDC, 48-70V Range
320DC-5X	20-70VDC, 120VAC Control
330DCX	120VDC, 120-160V Range
330DC-HX	120VDC, 120-160V Range, 125VDC 2A Contacts
330DC-1X	120VDC, 110-150V Range
330DC-2X	120VDC, 150-190V Range
340DCX	240VDC, 240-300V Range
340DC-HX	240VDC, 240-300V Range, 125VDC 2A Contacts
340DC-1SX	200VDC, 240-300V Range, Non-Mag., High Shock
350DCX	305VDC, 280-400V Range
350DC-HX	305VDC, 280-400V Range, 125VDC 2A Contacts
350DC-1SX	250VDC, 280-400V Range, Hi-Shock, 120VAC Control
360DCX	405VDC, 400-470V Range
360DC-HX	405VDC, 400-470V Range, 125VDC 2A Contacts
360DC-1X	405VDC, 400-470V Range, Spike Suppression
360DC-2X	475VDC, 475-550V Range
360DC-3X	550VDC, 550-600V Range
360DC-4X	350VDC, 350-440V Range, Bi-Directional
360DC-4HX	350VDC, 350-440V Range, Bi-Directional
370DCX	620VDC, 600-670V Range
370DC-2X	550VDC, 550-650V Range
370DC-1X	610VDC, 600-800V Range, 120VAC Control
370DC-3X	610VDC, 800-1000VDC Range
370DC-5X	960VDC, 900-1000VDC Range

AC, SINGLE PHASE, 50/60 HZ, SPECIALS

400X	120VAC
400HX	120VAC, Sim. to 400X with 125VDC 3A Contacts
400SX	120VAC, Hi-Shock, 10A Contacts
400-1X	120VAC, 55-72V Range
400-1HX	120VAC, Sim. to 400-1X, 125VDC 3A Contacts
400-S-1	450VAC, 240-350V Range, Hi-Shock, T.D.
400-2X	120VAC, 0.017 Sec. T.D.
400-S-2	440VAC, 280-420V Range, Hi-Shock, T.D.
400-3X	120VAC, 4.8 Sec. T.D., 80-115V Range
400-S-3	440VAC, 280-420V Range, Hi-Shock, T.D.
400-4X	240VAC, 170-240V Range
400-S-4	440VAC, Sim. to 400-2SX, 2-3 Sec. T.D., D.O. 160V
400-5X	450VAC, 320-450V Range
400-5SX	450VAC, 70-100% Range, Hi-Shock, 10A Contacts
400-6X	120VAC, 90-123V Range
400-7X	277VAC, 190-290V Range
400-8X	120VAC, 55-80V Range
400-8SX	120VAC, 50-70% Range, Hi-Shock
400-9X	480VAC, 320-480V Range
400-10X	120VAC, 1.0 Sec. T.D. with power loss
400-11X	480VAC, 1.0 Sec. T.D., 320-480V Range
400-12X	120VAC, Similar to 400-10X except 1 N.O. & 1 N.C.
400-13X	120VAC, 14-30V Range
400-14X	67VAC, 30-67V Range, Suppression
400-16X	120VAC, 0.6 Sec. T.D., 50-420 Hz
400-17X	120VAC, Similar to 400-2 with seismic
400-19X	120VAC, 125VDC 2A Contacts, Suppression
400-20X	208VAC, 24-48V Range
400-21X	120VAC, 94.8-102V Range, 6 +/-2 Sec. T.D.
400-23X	480VAC, 320-480V Range, 2.0 Sec. T.D.
400-24X	120VAC, 2.0 Sec. T.D.
400-25X	240/480VAC, 3-30Sec. T.D., Latching
400-26X	480VAC, 160-200V Range
400-27X	460VAC, 250-350V Range, 0.3 Sec. T.D., Set to 76V
400-28X	0.5VAC, 0.5-1.0V Range, 115VAC Control
400-29X	120VAC, 0.15 Sec. T.D., 10A Contacts
400-30X	24VAC, 18-24VAC Adjustable
400-31X	120VAC, 105-135V Range
400-32X	120VAC, 1 Ph. T.D. 0-10 Sec.
400-33X	480VAC, 1 Ph. T.D., 0-10Sec.
400-34X	120VAC, 55-72V Range, 2 N.O. Contacts
400-35X	120VAC, Similar to 400X, but 2 N.C. Contacts

Additional Relays (Continued)

400-36X	120VAC, Similar to 400-24X, 1 N.O., 1 N.C. Contact
400-37X	120VAC, Similar to 400X, with Suppression
400-38X	120VAC, 85-120V, 1-20 Sec. T.D., Instant. at 50V
400-38PX	120VAC, Similar to 400-38X with Spike Protection
400-39X	120VAC, 1.0 Sec. T.D., Transient Protection
400-40X	120VAC, 0.083 Sec. T.D.
400-41X	120VAC, Similar to 400X with 2 N.O. Contacts
400-43X	240VAC, 120-240V Range
400-44X	208VAC, 150-210V Range
400-47X	380VAC, Fast Operating, 220VAC 5A Contacts
400-49X	120VAC, 55-80V Range, 125VDC Contacts
400-50X	480VAC, 320-480V Range, 125VDC 1A Contacts
400-51X	120VAC, Sim. to 400-38X with 1-30 Sec. T.D.
400-52X	120VAC, 55-80V Range, 125VDC 2A Contacts
400-53SX	450VAC, 110-300V Range, 120V Control
400-54X	120VAC, Sim. to 400-13X with 1.0 Sec. T.D.
400-55X	208VAC, 125-208V, 24VDC Ctrl., 1 N.O. Contact
400-56X	208VAC, 24-48V Range, 2 N.O. Contacts
400-57X	120VAC, 25 Hz, 84-120V, 125VDC 3A Contacts
400-58X	277VAC, 194-277V Range, 0.020 Sec. T.D.
400-59X	139VAC, 97-159V Range
400-60X	240VAC, 84-120V Range
400-6IPX	120VAC, Similar to WUV-1-120P
400-62X	120VAC,30-42V Range, 125VDC Contacts
400-63X	120VAC,30-42V Range, 120VAC Contacts

AC, SINGLE PHASE, 400 HZ

402X	120VAC
402-SX	120VAC, Hi-Shock, NSN 5945-00-258-6662
402-1X	240VAC, 170-240V Range
402-1SX	240VAC, High Shock
402-2X	120VAC, 90-120V Range, 0.3 Sec. T.D., Set to 96V
402-3X	120VAC, Similar to 402-2X with 10A Contact
402-4X	120VAC, Similar to 402-2X with 0.15 Sec. T.D.

AC & DC, SINGLE PHASE, CLOSE DIFFERENTIAL

D100-10X	120VAC, 50-500Hz, -40 to +75 deg. C
D100-13X	450VAC, D.O. 60-100%, P.U. 66-100%
D100-15X	120VAC, 50-500Hz, 125VDC, 1 Amp Contacts
D100-16X	208VAC, 50-500Hz, 125VDC, 1 Amp Contacts
D100-17X	120VAC, 50-500Hz, 450VAC Input Capacitor, GE
D100-18X	120VAC, Hi-Shock, D.O. 72-84, P.U. 102-114 Range
D100-19X	120VAC, Hi-Shock, D.O. 80-120, P.U. 80-120 Range
D100-20X	150VAC, 105-150V Range
D100DCX	60 VDC, 48-55VDC Range, 1.5 Sec. T.D.
D100DC-15X	120VDC, 80-120VDC Adjust,0.4V Differential
D100DC-16X	60VDC, 40-60VDC Adjust, 0.2V Differential
D100DC-18X	40VDC, 20-40VDC Adjust, 120VAC Control
D100DC-19X	140VDC, 100-140VDC, 0.4V Differential
D100DC-22HX	120VDC, 80-120VDC Range, 120VDC Contacts
D100DC-23X	260VDC, 195-260VDC Range
D100DC-35X	30-40VDC Range, Plug-in, NSN 5945-00-650-8613
D100DC-36X	48VDC, Adjustable 38-48VDC
D100DC-37X	75VDC, 50-80VDC Range, 0.5A, 74VDC Contacts
D100DC-38X	270VDC, 190-270VDC Range, Similar to D100DC-23
D100DC-39X	28VDC, Adjustable 15-30VDC
D100DC-40X	28VDC, Approx. 2.0 Sec T.D.

AC, THREE PHASE, 50/60 HZ, SPECIALS

401X	120/208VAC, 4W, 85-120V Range
401-HX	120/208VAC, 4W, 125VDC 3A Contacts
401-1X	240VAC, 4W, 182-244V Range (L-L)
401-2X	480VAC, 4W, 360-485V Range (L-L)
401-2HX	480VAC, 3 or 4W, 125VDC 3A Contacts
401-3X	220VAC, 3W, 160-200V Range (L-L)
401-4X	380VAC, 4W, 150-220V Range (L-N)
401-5X	120VAC, 4W, 90-120V Range (L-L)

401-74X	66/115VAC, 4W, 65-75% Adj., Supp., 125VDC Cont.
401-75X	115/200VAC, 3W, 65-75% Adj., Suppression
401-76SX	450VAC, 3W, 382-450V, 0.3-0.5S T.D., Hi-Shock
401-77X	120/208VAC, 4W, 0.5-10 Sec. T.D., Lowest of 3
401-79X	480VAC, 3W, 0.2-0.3 Sec. T.D., Suppression
401-80X	76VAC, 3W, 53-76V Range
401-81X	120/208VAC, Sim. to 401-12X with 48VDC Contacts
401-82X	104VAC, 3W, Similar to WUV-3-104
401-83SX	120/208VAC, MIL-R-2033A
401-84X	180VAC, 3W, Similar to WUV-3-180
401-85SX	480VAC, Similar to 401-25SX except 480V
401-86SX	380VAC, Similar to 401-25SX except 380V
401-87SX	240VAC, Similar to 401-25SX except 240V
401-90X	120/208VAC, 4W, 0.5 Sec. T.D.
401-93X	480VAC, 3W Fast Oper. 50mS., Suppression
401-97X	69/120VAC, Lowest of 3
401-98X	480VAC, Sim. to 401TD-9HX with 2.0 Sec. T.D.

AC, THREE PHASE, 400 HZ

403X	120/208VAC, 4W
403-1X	115/200VAC, 4W, 35-400mS T.D.
403-1SX	115VAC, 3W, Hi-Shock
403-2X	120VAC, 3W
403-3X	120/208VAC, 4W, 1.0 Sec. T.D.
403-4X	254/440VAC, 4W
403-5X	120/208VAC, 4W, 2 N.C. Contacts
403-7SX	480VAC, 3W, T.D., Hi-Shock
403-10X	120/208VAC, 4W, 10A Contacts
403-11X	480VAC, 4W, 60% to 80% Range
403-13X	120/208VAC, 4W, 0C to +90C
403-14X	575VAC, 3W, 400-500V Range
403-15X	120/208VAC, Sim. to 403-13X with Latching Circuit
403-16X	120/208VAC, Sim. to 403X with Conformal Coating

AC THREE PHASE, CLOSE DIFFERENTIAL

D101-3X	Similar to D101X, -55C to +85C
D101-5X	120VAC, 50-500Hz, Military
D101-9X	120VAC, 50-500Hz, 0.5 Sec. T.D.
D101-11X	120VAC, 50-500Hz, 120-150VAC Adjust, N.C. Cont.
D101-12X	120VAC, Similar to D101X but 60-120VAC Range
D101-13X	120VAC, Similar to D101X but 3 N.C. Contacts
D101-14X	208VAC, Similar to D101-6X but 3 N.C. Contacts
D101-15X	480VAC, 50-500Hz, Spike Suppressors
D101-16X	480VAC, Similar to D101-7X but 3 N.C. Contacts
D101-17X	120VAC, 0.4A 120VDC Contact, -20 to +85 deg C
D101-18X	120VAC, Similar to D101X but Spike Suppression
D101-19X	208VAC, Similar to D101-6X but Spike Suppression
D101-20X	240VAC, Similar to D101-4X but Spike Suppression
D101-21X	380VAC, Similar to D101-10X but Spike Suppression
D101-24X	240VAC, 3 N.C. Contacts
D101-25X	208VAC, 3 N.C. Contacts, Spike Suppression
D101-26X	277VAC, 50-500Hz, 66-100% Adjustable
D101-27X	120VAC, Sim. to D101X, withstand 208V continuous
D101-29X	415VAC, 50-500Hz
D101-30X	380VAC, 50-500Hz, 3 N.C. Contacts
D101-31X	525VAC, Spike Suppression
D101-32X	120VAC, 50-500Hz, 5 Sec T.D.

DC

400DCX	120VDC, 85-120V Range
400DC-HX	120VDC, 85-120V Range, 125VDC 2A Contacts
400DC-lX	28VDC, 15-29V Range
400DC-2X	240VDC, 180-220V Range
400DC-3X	62.5VDC, 40-65V Range
400DC-4X	305VDC, 200-300V Range
400DC-5X	5.6VDC, 4-6V Range, 120VAC Cont
410DCX	28VDC, 16—29V Range
410DC-SX	28VDC, 16-29V Range, Hi-Shock, MIL-R-57
410DC-1X	28VDC, 15-32V Range, 1.5V Differential
410DC-5X	24VDC, 16-29V Range, Suppression
410DCTDX	28VDC, 0.5-20 Sec. T.D.
411DCX	12VDC, 9-12 V Range
411DC-1X	15VDC, 11-15V Range
411DCTDX	12VDC, 0.5-20 Sec. T.D.
420DCX	60VDC, 40-65V Range

Additional Relays (Continued)

420DC-4X	48VDC, 32-48V Range
420DC-5X	48VDC, 20-48V Range
420DC-6X	70VDC, 50-70V Range
420DC-8X	32VDC, 33-40V Range (Pick-Up)
420DC-9X	48VDC, Similar to 420DC-4X with 2 N.O. Contacts
420-470 SUFFIX	SUFFIX : "A" 2 N.O. Contacts "B" 2 N.C. Contacts
430DCX	120VDC, 85-120V Range
430DC-HX	120VDC, 85-120V Range, 125VDC 3A Contacts
430DC-1X	140VDC, 105-140V Range
430DC-2X	140VDC, 105-140V Range, 0.5 Sec. T.D., Suppression
430DC-3X	120VDC, 50-80V Range
430DC-4X	120VDC, 85-120V Range, 0.5 Sec. T.D., Set at 90V
430DC-5X	125VDC, 90-125V Range, Spike Suppression
430DC-6X	125VDC, 105-140V Range, 3.0-5.0 Sec. T.D.
430DC-7X	170VDC, 120-170V Range
430DC-8X	120VDC, 85-120V Range, 2 N.C. Contacts
430DC-9X	100VDC, 35-50V Range
430DC-10X	120VDC, 85-120V Range, 2 N.O. Contacts
440DCX	240VDC, 168-240V Range
440DC-HX	240VDC, 168-240V Range, 125VDC 3A Contacts
440DC-1X	280VDC, 190-260V Range
450DCX	305VDC, 230-305V Range
450DC-HX	305VDC, 230-305V Range, 125VDC 3A Contacts
450DC-1X	305VDC, 230-305V Range, 2 N.C. Contacts
460DCX	405VDC, 315-415V Range
460DC-HX	405VDC, 315-415V Range, 125VDC 3A Contacts
460DC-1X	405VDC, 300-330V Range
460DC-3X	405VDC, 300-425V Range
460DC-4X	432VDC, 275-325V Range
460DC-5X	470VDC, 300-425V Range
470DC	560VDC, 400-500V Range
470DC-1X	585VDC, 400-500V Range
	DC TIME DELAY
420DCTDX	48VDC, 32-48V Range, 0.5-20 Sec. T.D.
430DCTDX	125VDC, 83-125V Range, 0.5-20 Sec. T.D.
440DCTDX	250VDC, 166-250V Range, 0.5-20 Sec. T.D.

OVER/UNDERVOLTAGE RELAYS

AC, SINGLE PHASE

250SX	120VAC, Hi-Shock
250-1X	120VAC, 72-120V, Mil, NSN 6125-00-091-0969
250-2X	120VAC, 1.2 Sec. Time Delay
250-3X	67VAC, UV 30-67V, OV 67-91V
250-4X	26VAC, 28VDC Control, Connector
250-5X	240VAC, Two N.C. Contacts
250-6X	240VAC, One N.O., One N.C. Contact
250-6HX	240VAC, 120VDC, 3A Contact
250-7X	120VAC, 3 Sec. Time Delay
250-8X	100VAC
250-10X	120VAC, Fast Trip, 25mS
250-11X	120VAC, Set at 97V and 156V
250-12X	120VAC, Sim. to 250X, MIL-R-5757 2A
250-14XAC	67VAC, Sim. to 250-3X with removable cover
250-17X	120VAC, Sim. to 250X plus suppression
250-19X	120VAC, Sim. to 250X with 2 N.O. Contacts
250-22X	240VAC, 1-2 Sec. TD on Drop Out
250-23X	120VAC, Sim. to 250X but -40C to +52C

1100-25X	120VAC, 0.25-1.25A
1100-26X	120VAC, 0.3-1.5A, Withstand 5A
1100-27X	220VAC, 1-5A Range, 220VAC Contacts
1100-32X	120VAC, Undercurrent 1-10A Adj, 0.2-5 Sec. T.D.
1100-35X	120VAC, 0.1-0.4A Range
1100-36X	74VDC, 4-20A, 50mS T.D., Shock & Vibration
1100-37X	24VDC, 0.1-0.3A Range
1100-38X	74VDC, Similar to WC1-74DC-5

AC, SINGLE PHASE, ADJ. DIFFERENTIAL

D1100X	120VAC, 1-5A Range
D1100-2X	220VAC, 1-5A Range
D1100-3X	120VAC, 4-12A Range
D1100-4X	230VAC, 4-12A Range
D1100-5X	460VAC, 4-12A Range
D1100-6X	120VAC, 1-5A Range, 1-2 Sec. T.D.
D1100-7X	120VAC, 0.7-5A Range, 125VDC 0.5A Contacts
D1100-8X	120VAC, 5-15A Range

AC, SINGLE PHASE, TIME DELAY

1100TDX	120VAC, 1-5A Range, 0.5-30 Sec. T.D.
1100TD-HX	120VAC, 1-5A, 0.5-30 Sec. T.D., 125VDC 3A Cont.
1100TD-SX	120VAC, 1-5A Range, 0.5-20 Sec. T.D., Hi-Shock
1100TD-1X	240VAC, 1-5A Range, 0.5-30 Sec. T.D.
1100TD-2X	24VDC, 1-5AAC Range, 0.5-30 Sec. T.D.
1100TD-3X	120VAC, 0.5-5A Range, 0.5-30 Sec. T.D.
1100TD-5X	120VAC, 0.5-2.5A Range, 0.5-30 Sec. T.D.
1100TD-6X	120VAC, 1-5A , 0.2-20 Sec. T.D., Manual Reset
1100TD-8X	220VAC, 2-10A Range, 220VAC 5A Contacts
1100TD-9X	24VDC, 0.5-5AAC Range, 0.5-20 Sec. T.D.
1100TD-10X	120VAC, Sim. to WCT1-120AC-5 w/ removable cover
1100TD-11X	120VAC, Sim. to WCT1-120AC-5, 1-5 Min. T.D.
1100TD-12X	120VAC, Sim. to WCT1-120AC-5, 0.5-5 Sec. T.D.
OPTION	1: 0.2A to 1.0A Range 2.5: 0.5A to 2.5A Range 5: 1.0A to 5.0A Range 10: 2.0A to 10.0A Range

AC, THREE PHASE, TIME DELAY

1130TDX	120VAC, 1-5A, 0.5-20 Sec. T.D.
1130TD-1X	24VDC, 1-5A, 0.5-20 Sec. T.D.
1130TD-2X	120VAC, 1-5A, 0.5-20 Sec. T.D., Suppression
1130TD-3X	120VAC, 1-5A, 0.5-60 Sec. T.D., 2 N.C. Contacts
1150X	120VAC, 4.35A, 0.5-5 Sec. T.D.
1150-1X	120VAC, 4.26A, 0.5-5 Sec. T.D.
1150-2X	120VAC, 3.72A, 0.5-5 Sec. T.D.
1150-4X	120VAC, 1-5A, (P.G.E.)
1150-6X	120VAC, 1-5A, 2-3 Sec. T.D. on D.O.
1150-8X	120VAC,Same as 1150-2X with 2 N.O. Contacts
1150-10X	120VAC, 1-5A, 2 Sec. T.D.
1150-10SX	120VAC, 1-5A, 2 Sec. T.D., Hi-Shock
1150-11X	120VAC, 2.5-5A, 400Hz, Special T.D. Curve
1150-12X	120VAC, 2.5-5A, 60Hz, Special T.D. Curve
1150-14X	120VAC, 2.5-5A, 400Hz, T.D. Curve, Aux. N.O.
1150-15X	24VDC, 1.2-2.2A, 60Hz, T.D. Curve, (Solar)
1150-16X	24VDC, 2.5-4.3A, 60Hz, T.D. Curve, (Solar)

VOLTAGE RESTRAINT

1200X	120VAC, 1-5A, 24VDC Control
1200-1X	120VAC, 1-5A, 12VDC Control
1200-4X	120/208VAC, 1-5A, 3 Phase, 24VDC Control
1200-5X	120VAC, 1-5A, 3 Phase, 24VDC Control
1200-6X	120VAC, 1-5A, 3 Phase, 24VDC Control, Suppression
1200-7X	120VAC, 1-5A, 1 Phase, 120VAC Control
1200-8HX	120VAC, 1-5A, 3 Phase, 125VDC Control

DC

1100DCX	120VAC, 10-50mV ext. Shunt, 5A Contacts
1100DC-1X	230VAC, 0-10VDC ext. Shunt, 5A Contacts
1100DC-2X	120VAC, 10-50mV ext. Shunt, Transistor Output
1100DC-3X	120VAC, 0.2-0.6ADC with 0.125 ohm Shunt
1100DC-4X	28VDC, 10-50mV, Inverter, ext. Shunt, 2 Sec. T.D.
1100DC-6X	125VDC, 10-50mV, Inverter, 125VDC 3A Contacts
1100DC-7X	120VAC, 10-50mV, Inverter, 125VDC 3A Contacts
1100DC-8X	120VAC, isolated outputs
1100DC-9X	250VDC, 150mV Shunt, Hi-Shock, +/- 20% Adj.
1100DC-10X	120VAC, 50-150mV
1100DC-11X	220VDC, 5-25mV, 1-25 Sec. T.D., Inverse Current
1100DC-13X	120VAC, 20-35mV, Hi-Shock
1100DC-15X	12VDC, 10-50mV, Inverter
1100DC-17X	74VDC, 10-50mV, Inverter
1100DC-20X	120VAC, Similar to 1100DCX except 4-25mV

MDR Series, 10 Amp Rotary Relay
For Demanding Shock & Vibration Applications

Product Facts

- AC and DC coils, latching and non-latching
- 4PDT through 24PDT contact arrangements
- Designed to withstand high impact shock per MIL-S-901

Small 8PDT

Medium 24PDT

Specifications

Contact Data

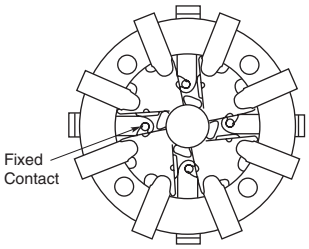

Arrangements — 4 Form C (4PDT) through 24 Form C (24 PDT).

Contact Ratings

Single Contacts	Two Contacts in Series
10 A, 115 VAC	3 A, 440 VAC
3 A, 28 VDC	15 A, 115 VAC
0.8 A, 125 VDC	1.5 A, 125 VDC

The above AC contact ratings are based on contact loads having a 50% power factor. The DC contact ratings are based on resistive loads.

Contact Section

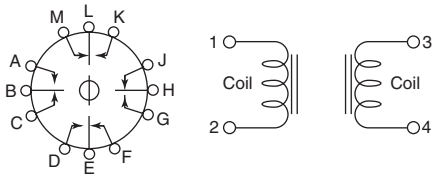

Operate Data @ 77°F [25°C]

Type	Typ. Operate Time (ms)	Typ. Release Time (ms)
Small AC Non-Latching	5 to 12	5 to 18
Small DC Non-Latching	15 to 30	5 to 15
Small AC Latching	6 to 12	N/A
Small DC Latching	10 to 16	N/A
Medium AC Non-Latching	6 to 12	6 to 20
Medium DC Non-Latching	65 to 90	10 to 30
Medium AC Latching	50 (max.)	N/A
Medium DC Latching	30 to 80	N/A

Latching Two-Position Types — Except for the latching feature, MDR latching relays utilize the same general construction as non-latching types. They have two sets of coils and provide a latching two-position operation.

Contacts Shown With Coil 1-2 De-Energized and Coil 3-4 Energized.

Coils Must be Energized Alternately, Not Simultaneously.

Environmental Data

Temperature Range —
Standard models — 0°F to +149°F [0°C to +65°C]
Special order models — 0°F to +194°F [0°C to +90°C]

Mechanical Data

Termination — #5-40 screw terminals supplied

Weight (Approx.) —
Small —
4 & 8PDT — 32 oz. [0.914 kg];
12PDT — 33 oz. [0.943 kg]
Medium —
16PDT — 72 oz. [2.04 kg];
24PDT — 74 oz. [2.10 kg]

MDR Series, 10 Amp Rotary Relay
For Demanding Shock & Vibration Applications (Continued)

Ordering Information and Coil Characteristics — No models in this series are maintained in stock.

Type	Part Number	Contacts	Coil Voltage (60 Hz. for AC)	Coil Current (Amps)	DC Coil Resistance (Ohms)	Coil Power* (Watts)	Breakdown (Volts RMS)
Small Non-Latching	MDR-131-1	4PDT	115 VAC	0.215	66	6.5	1,230

AGASTAT 2100 Series, Miniature Electropneumatic Timing Relay

Product Facts

- **High Repeat Accuracy over voltage and temperature extremes**
- **Hermetically sealed units are designed for high shock and vibration applications**
- **Instant recycling — easy linear adjustment**
- **Exclusive Dial Head adjustment — no needle valves**
- **Delay ranges from milliseconds to 3 minutes**
- **DPDT contacts**

Design & Construction

Sealed patented timing head — circulates air under controlled pressure through a variable orifice to provide adjustable timing. Circular-path Dial Head principle replaces traditional needle valve.

Snap-action switch assembly — provides sustained contact pressure during timing cycles. Specially designed over center mechanism assures flutter-free load transfer after extended delay periods.

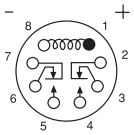

Precision-wound solenoid assembly — supplies the basic motive force when the control circuit is closed.

These assemblies are mounted in a rigid self-supporting framework within a steel enclosure. This rugged construction assures permanent alignment of all operating members, the key to this unit's long trouble-free operation.

Users should thoroughly review the technical data before selecting a product part number. It is recommended that users also seek out the pertinent approvals files of the agencies/laboratories and review them to ensure the product meets the requirements for a given application.

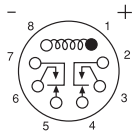

CE

Operation

Series 2112

Series 2112 (On-Delay) — Applying rated voltage to the solenoid coil starts the preset time delay. At the end of the delay period the NC contacts break and the NO contacts make. Contacts remain in this position until the coil is de-energized, when the switch instantaneously returns to its original position. De-energizing the coil, either during or after the delay period, will immediately (within 25 msec.) recycle the unit. It will then provide another full delay period on re-energization.

Series 2122

Series 2122 (Off-Delay) — Applying rated voltage to the coil for at least 75 msec. (for accurate timing) will instantaneously transfer the switch, breaking the NC contacts and making the NO contacts. Contacts remain in this position as long as the coil is energized. The preset time delay period begins as soon as the coil is de-energized, at the end of which the switch returns to its original position. **No power is required during the timing period.** Re-energizing the coil, either during or after the delay period, will immediately start a new cycle with full delay period.

Operation (Listed values at nom. voltage, 25°C unless noted)

Operating Mode —

2112 — On-delay (delay on pull-in);
2122 — Off-delay (delay on drop-out)
Timing Adjustment — All standard models offer easy linear adjustment over one of nine timing ranges listed below. For applications requiring frequent readjustment, the external knob model is recommended. For tamper-proof installation or where readjustment is infrequent, the internal key model may be preferred. This model requires removal of the cover plate for timing adjustment. Hermetically sealed models provide a slotted adjusting screw under the cap nut on the top cover.

Timing Ranges —

Code	Range
A	.03 to .1 sec.
B	.1 to .3 sec.
C	.15 to 1.0 sec.
D	.375 to 3.0 sec.
E	.75 to 10.0 sec.
F	1.0 to 30.0 sec.
G	2.0 to 60.0 sec.
H	5.0 to 120.0 sec.
J	5.0 to 180.0 sec.
K	1.5 to 30.0 cycles
L	3.0 to 120.0 cycles

Repeat Accuracy — NORMAL VERTICAL POSITION
±5% at 25°C; ±7% at 85°C; ±8% at -55°C.
The average time between -55°C and 85°C will be within ±20% of the average @ 25°C with a proportionally reduced effect at lesser extremes.

In extremely short delay settings an additional 8 msec. variation may result on AC models due to "half cycle" alternating current effect.

Setting Tolerance — Factory time setting, when specified, subject to additional +5% tolerance.

Position Sensitivity —
HORIZONTAL POSITION — Approximately 5% increase from the initial time in the vertical position.
INVERTED POSITION — Approximately 10% increase from the initial time in the vertical position.

Reset Time — 2112 Series: 25 msec.; 2122 Series: 75 msec.

Relay Release Time — 25 msec. (2112 Series)

Relay Operate Time — 75 msec. (2122 Series)

Operating Voltage — Coil Data

Code	Nominal Operating Voltage	Resistance Ohms ±10%
M	12VDC	30
N	28VDC	131
P	48VDC	500
R	110VDC	3200
S	120V 60 Hz	190 (2112 Series)
S	120V 60Hz	285 (2122 Series)
T	240V 60Hz	765
U	115V 400Hz	2600
Y	125VDC	3380

Transients — Insensitive to transients of ±1500 VAC for 10 milliseconds

Dielectric — 1000V RMS @ 60Hz between non-connected terminals.

Contact Rating (DPDT Contacts) —

	30V DC	110V DC	120V 60Hz	120V 400Hz	240V 60Hz
Inductive (Amps)	2	.75	3	2	1.5
Resistive (Amps)	10	1	10	10	5

Based on 100,000 operations electrical, 1,000,000 mechanical. Inductive and capacitive load should not have inrush currents that exceed five times normal operating load.

Ambient Temperature Range — -55°C to +85°C

Weight — Maximum, any unit - 17 ozs.

Mounting/Terminals — Chassis mounting tabs, octal plugs and external (-4) or internal (-5) adjustment. Panel mounting back plate, internal adjustment, and solder hook terminals (-9).

AGASTAT 7000 Series, Industrial Electropneumatic Timing Relay

Product Facts

- **Available in on-delay, true off-delay, and on/off-delay**
- **Timing from 0.1 seconds to 60 minutes, in linear increments**
- **Oversize adjustment knobs, serrated with high-resolution markings visible from all angles makes the timer easy to set timers**
- **Inherent transient immunity**
- **Standard voltages from 6-550VAC and 12-550VDC (special voltages available)**
- **Available in 2-pole or 4-pole models**
- **Numerous enclosure options — explosion proof, dust tight, watertight, hermetically-sealed, NEMA 1**
- **Auxiliary timed and instantaneous switches can be added for greater switching flexibility**
- **Many mounting options — Surface mount, Panel mount**
- **Options: quick-connect terminals, dial stops, and transient protection module**
- **Easy-to-reach screw terminals, all on the face of the unit, clearly identified**
- **Modular assembly — timing head, coil assembly and switchblock are all individual modules, with switches field-replaceable**
- **File E15631, File LR29186**

Design & Construction

There are three main components of Series 7000 Timing Relays:

Timing Head circulates air through a variable length to provide linearly adjustable timing. Patented design provides easy adjustment and long service life under severe operating conditions.

Precision-Wound Potted Coil Total sealing without external leads eliminates moisture problems, gives maximum insulation value.

Snap-Action Switch Assembly — custom-designed over-center mechanism provides snap action. Standard switches are DPDT arrangement.

Each of these subassemblies forms self-contained modules assembled at the factory with the other two to afford a wide choice of operating types, coil voltages, and timing ranges.

The squared design with front terminals and rear mounting permits the grouping of Series 7000 units side-by-side in minimum panel space. Auxiliary switches may be added in the base of the unit, without affecting the overall width or depth.

Operation

Two basic operating types are available.

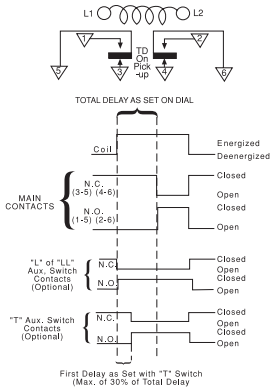

"On-Delay" models provide a delay period on energization, at the end of which the switch transfers the load from one set of contacts to another. De-energizing the unit during the delay period immediately recycles the unit, readying it for another full delay period on re-energization.

In "Off-Delay" models the switch transfers the load immediately upon energization and the delay period does not begin until the unit is de-energized. At the end of the delay period the switch returns to its original position. Re-energizing the unit during the delay period immediately resets the timing, readying it for another full delay period on de-energization. No power is required during the timing period, providing a true off delay.

In addition to these basic operating types, "Double-Head" models offer sequential delays on pull-in and drop-out in one unit. With the addition of auxiliary switches the basic models provide two-step timing.

Note: Seismic & radiation tested E7000 models are available. Consult factory for detailed information.

On-delay model 7012 (delay on pickup)

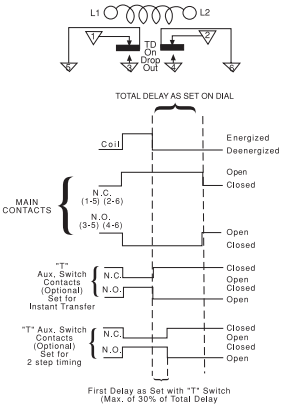

Applying voltage to the coil (L1-L2) for at least 50 msec starts a time delay lasting for the preset time. During this period the normally closed contacts (3-5 and 4-6) remain closed. At the end of the delay period the normally closed contacts break and the normally open contacts (1-5 and 2-6) make. The contacts remain in this transferred position until the coil is deenergized, at which time the switch returns to its original position.

De-energizing the coil, either during or after the delay period, will recycle the unit within 50 msec.

It will then provide a full delay period upon re-energization, regardless of how often the coil voltage is interrupted before the unit has been permitted to "time-out" to its full delay setting.

Off-delay model 7022 (delay on dropout)

Applying voltage to the coil (for at least 50 msec) will transfer the switch, breaking the normally closed contacts (1-5 and 2-6), and making the normally open contacts (3-5 and 4-6). Contacts remain in this transferred position as long as the coil is energized. The time delay begins immediately upon de-energization. At the end of the delay period the switch returns to its normal position.

Re-energizing the coil during the delay period will immediately return the timing mechanism to a point where it will provide a full delay period upon subsequent de-energization. The switch remains in the transferred position.

Note: 7032 types and certain models with accessories are not agency approved.

Users should thoroughly review the technical data before selecting a product part number. It is recommended that users also seek out the pertinent approvals files of the agencies/laboratories and review them to ensure the product meets the requirements for a given application.

Consult factory for ordering information.

AGASTAT 7000 Series, Industrial Electropneumatic Timing Relay (Continued)

Auxiliary Switch Options

To increase the versatility of the basic timer models, auxiliary switches may be added to either on-delay or off-delay types. They switch additional circuits, provide two-step timing action, or furnish electrical interlock for sustained coil energization from a momentary impulse, depending on the type selected and its adjustment. They are installed at the factory. All auxiliary switches are SPDT with UL listings of 10A @ 125, 250, or 480 VAC. A maximum of one Code T or two Code L auxiliary switches may be added to each relay. The L or LL switch is available with on-delay relays only. The T switch is available with both the on-delay and off-delay relays.

Auxiliary Switch Options for On-Delay

Instant Transfer (Auxiliary Switch Code L, maximum of 2 per relay.)

1. Energizing coil begins time delay and transfers auxiliary switch.
2. Main switch transfers after total preset delay.
3. De-energizing coil resets both switches instantly.

Auxiliary switch is nonadjustable.

Two-Step Timing (Auxiliary Switch Code T, maximum of 1 per relay.)

1. Energizing coil begins time delay.
2. After first delay auxiliary switch transfers.
3. Main switch transfers after total preset delay.
4. De-energizing coil resets both switches instantly. First delay is independently adjustable, up to 30% of overall delay. (Recommended maximum 100 seconds.)

Auxiliary Switch Options for Off-Delay

In these models the same auxiliary switch provides either two-step timing or instant transfer action, depending on the adjustment of the actuator.

Two-Step Timing (Auxiliary Switch Code T, maximum of 1 per relay.)

1. Energizing coil transfers main and auxiliary switches instantly.
2. De-energizing coil begins time delay.
3. After first delay auxiliary switch transfers.
4. Main switch transfers after total preset delay. First delay is independently adjustable, up to 30% of overall delay. (Recommended maximum 100 seconds.)

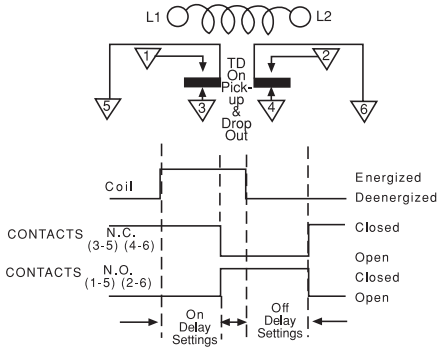

Instant Transfer (Auxiliary Switch Code L, maximum of 1 per relay.)

1. Energizing coil transfers main and auxiliary switches instantly.
2. De-energizing coil resets auxiliary switch and begins time delay.
3. Main switch transfers after total preset delay.

Auxiliary switch is factory adjusted to give instant transfer operation. Two-step timing may be set at the factory to customer specification up to a 3:2 ratio.

On-delay, Off-delay Model 7032 (Double Head)

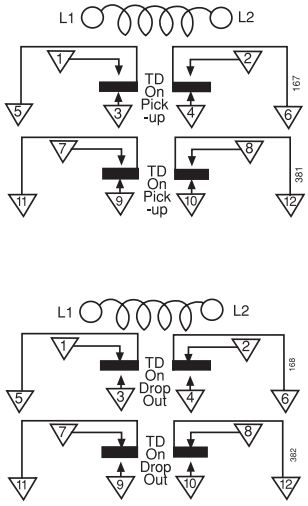

The Double Head model provides delayed switch transfer on energization of its coil, and delayed resetting upon coil de-energization. Each delay period is independently adjustable.

In new circuit designs or the improvement of existing controls now using two or more conventional timers, the Double Head unit offers distinct advantages.

Its compact design saves panel space, while the simplified wiring reduces costly interconnection.

On-delay Model 7014, Off-delay Model 7024

With the addition of an extra switch block at the bottom of the basic unit, this version of the Series 7000 offers four pole switch capacity with simultaneous timing or two-step timing. The two-step operation is achieved by factory adjustment to your specifications.

For two-step operation, a maximum timing ratio between upper and lower switches of 3:2 is recommended. Once adjusted at the factory, this ratio remains constant regardless of changes in dial settings. (Ex: If upper switch transfer is set on dial at 60 sec., minimum time on lower switch should be 40 sec.)

This Series 7000 unit offers many of the performance features found in basic models — voltage ranges, timing and switch capacities.

Four pole models add approximately 1-1/4" to the maximum height of the basic model, approximately 1/8" to the depth. They are designed for vertical operation only.

AGASTAT 7000 Series, Industrial Electropneumatic Timing Relay (Continued)

Surge/Transient Protection Option

Transient Suppressor Option "V"

Product Facts

- **Protect electronic control circuits from voltage transients generated by the timer coil**
- **Fast response to the rapidly rising back E.M.F.**
- **High performance clamping voltage characteristics**
- **UL recognized, (except varistor and coil together).**
- **Timer NOT polarity sensitive**

The Surge/Transient Protection Option protects electronic control circuits from transients and surges which are generated when the timer coil is activated. The device is not polarity sensitive and permits the user to initiate, delay, sequence and program equipment actions over a wide range of applications under the most severe operating conditions.

The varistor will not affect the operating characteristics of the 7000 Timer. The varistor has bilateral and symmetrical voltage and current characteristics.

Timing Specifications (All values shown are at nominal voltage and 25°C unless otherwise specified)

Operating Modes —
Model 7012/7014 — On-delay (delay on pick-up).
Model 7022/7024 — Off-delay (delay on drop-out).
Model 7032 — On-delay, off-delay (double head).

Timing Adjustment — Timing is set by simply turning the dial to the desired time value. In the zone of approximately 25° separating the high and low end of timing ranges A,D,E, and K, instantaneous operation (no time delay) will occur. All other ranges produce an infinite time delay when the dial is set in this zone.

Models 7014 and 7032 are available with letter dials only. The upper end of the time ranges in these models may be twice the values shown.

Linear Timing Ranges —

Code	Models 7012, 7022, 7024	Models 7014, 7032
A	.1 to 1 Sec.	.2 to 2 Sec.
B	.5 to 5 Sec.	.7 to 7 Sec.
C	1.5 to 15 Sec	2 to 20 Sec.
D	5 to 50 Sec.	10 to 100 Sec.
E	20 to 200 Sec.	30 to 300 Sec.
F	1 to 10 Min.	1.5 to 15 Min.
H	3 to 30 Min.	3 to 30 Min.
I	6 to 60 Min.	Not Avail.
J	3 to 120 Cyc.	Not Avail.
K	1 to 300 Sec.	Not Avail.

Repeat Accuracy —

For delays of 200 seconds or less:	7012*, 7022, 7024:	±5%
	7014*:	±10%
	7032:	±15%
For delays greater than 200 seconds:	7012*, 7022, 7014*, 7024:	±10%
	7032:	±15%

* The first time delay afforded by Model 7012 with H (3 to 30 min.) and I (6 to 60 min.) time ranges or Model 7014 with H time range will be approx. 15% longer than subsequent delays due to coil temperature rise.

Reset Time — 50 msec. (except model 7032)

Relay Release Time — 50 msec. for on-delay models (7012/7014)

Relay Operate Time — 50 msec. for off-delay models (7022/7024)

Operating Voltage Coil Data (for DPDT)

Coil Part #	Code Letter	Rated Voltage	Operating* Voltage Range @ 60Hz	Rated Voltage	Operating Voltage Range @50Hz
7000	A	120	102-132	110	93.5-121

	Y	6	4.8-6.6		
	Z	220	176-242		
	X		Special DC Coils (X1, X2, etc.)		

*Four pole Models: Operational voltage range 90% to 110% for AC units; 85% to 110% for DC units.

See next page for more coil data.

AGASTAT 7000 Series, Industrial Electropneumatic Timing Relay (Continued)

Timing Specifications (All values shown are at nominal voltage and 25°C unless otherwise specified)

Minimum operating voltages are based on vertically mounted 7012 units. 7012 horizontally mounted or 7022 vertically or horizontally mounted units will operate satisfactorily at minimum voltages approximately 5% lower than those listed.

AC units drop out at approximately 50% of rated voltage. DC units drop out at approximately 10% of rated voltage.

All units may be operated on intermittent duty cycles at voltages 10% above the listed maximums (intermittent duty - maximum 50% duty cycle and 30 minutes "on" time.)

Surge/Transient Protection Option Characteristics (DC Timers Only)

Coil Voltage Nominal (DC)	Max Excess Energy Capacity (Joule)	Max De-energization Transient Voltage
12 V	0.4 J	48 V
24 V	1.8 J	93 V
28 V	1.8 J	93 V
32 V	2.5 J	135 V

60 V	6 J	250 V
96 V	10 J	340 V
110 V	10 J	340 V
125 V	10 J	340 V
220 V	17 J	366 V
250 V	17 J	366 V

Surge Life —
Applied 100,000 times continuously with the interval of 10 seconds at room temperature. Below 68 VAC: 12A; Above 68 VAC: 35A

Temperature Range —
Operating — -22°F to +167°F (-30°C to + 75°C)
Storage — -40°F to +167°F (-40°C to +75°C)

Output/Life Contact Ratings — Contact Capacity in Amps (Resistive Load)

Contact Voltage	Min. 100,000 Operations	Min. 1,000,000 Operations
30 VDC	15.0	7.0
110 VDC	1.0	0.5
120 V 60Hz	20.0	15.0
240 V 60Hz	20.0	15.0
480 V 60Hz	12.0	10.0

10 Amps Resistive, 240 VAC

1/4 Horsepower, 120 VAC/240VAC (per pole)

15 Amps 30 VDC (per pole)

5 Amps, General Purpose, 600VAC (per pole)

Dielectric — Withstands 1500 volts RMS 60Hz between terminals and ground. 1,000 volts RMS 60 Hz between non-connected terminals. For dielectric specification on hermetically sealed models consult factory.

Insulation Resistance — 500 Megohms with 500VDC applied.

Temperature Range —
Operating — -20°F to +165°F (-29°C to 74°C)
Storage — -67°F to +165°F (-55°C to 74°C)

Temperature Variation — Using a fixed time delay which was set and measured when the ambient temperature was 77°F (25°C), the maximum observed shift in the average of three consecutive time delays was -20% at -20°F (-29°C) and +20% at 165°F (74°C).

Mounting/Terminals — Normal mounting of the basic unit is in a vertical position, from the back of the panel. **All units are tested for vertical operation.** Basic models (7012, 7022) may also be horizontally mounted, and will be adjusted accordingly **when Accessory Y1 is specified in your order.**

Standard screw terminals (8-32 truss head screws supplied) are located on the front of the unit, with permanent schematic markings. Barrier isolation is designed to accommodate spade or ring tongue terminals, with spacing to meet all industrial control specifications.

The basic Series 7000 may also be panel mounted with the addition of a panel mount kit, X option, that includes all necessary hardware and faceplate. This offers the convenience of "out-front" adjustment, with large dial skirt knob. The faceplate and knob blend with advanced equipment and console designs, while the body of the unit and its wiring are protected behind the panel.

Other mounting options include plug-in styles and special configurations to meet unusual installation requirements. Contact factory for details.

Power Consumption — Approximately 8 watts power at rated voltage .

Approximate Weights —

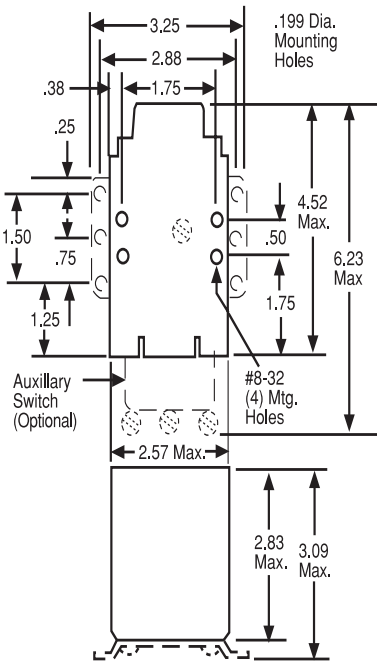

Models
7012, 7022 . . . . . 2 lbs. 4 ozs.
7014, 7024 . . . . . 2 lbs. 10 ozs.
7032 . . . . . 3 lbs. 5 ozs.

Weight may vary slightly with coil voltage.

E = 24VAC, 60 Hz.	Q = 12VDC
F = 127VAC, 50 Hz.	R = 60VDC
G = 240VAC, 50Hz.	S = 250VDC
H = 12VAC, 60 Hz.	T = 550VDC
K = Dual voltage (combines A & B)	U = 16VDC
L = Special AC coils (L1, L2, etc.)	V = 32VDC
	W = 96VDC
	Y = 6VDC
	Z = 220VDC
	X = Special DC coils (X1, X2, etc.)

5. Timing Range:

Models 7012, 7022 & 7024	†Models 7014 & 7032
A = .1 to 1 sec.	For model 7032 specify separate time
B = .5 to 5 sec.	range code for each head. Example: AB.
C = 1.5 to 15 sec.	Any two ranges may be selected.
D = 5 to 50 sec.	A = .2 to 2 sec.
E = 20 to 200 sec.	B = .7 to 7 sec.
F = 1 to 10 min.	C = 2 to 20 sec.
H = 3 to 30 min.	D = 10 to 100 sec.
I = 6 to 60 min.	E = 30 to 300 sec.
J = 3 to 120 cyc.	F = 1.5 to 15 min.
K = 1 to 300 sec.	H = 3 to 30 min.

6. Options:

A1 = Single quick-connect terminals (note 4).
A2 = Double quick-connect terminals (note 4).
B = Plug-in connectors (note 4).
GZ = Enclosure with bottom knockouts (note 1).
H2 = Hermetically sealed enclosure, 8 pin solder (notes 1 & 4).
H3 = Hermetically sealed enclosure, 8 pin octal (notes 1 & 4).
H4 = Hermetically sealed enclosure, 8 screw terminal block (notes 1 & 4).
*H6 = Hermetically sealed enclosure, 11 pin solder (notes 1 & 4).
*H7 = Hermetically sealed enclosure, 11 pin octal (notes 1 & 4).
*H8 = Hermetically sealed enclosure, 11 screw terminal block (notes 1 & 4).
I1 = Tamper-proof Cap, opaque black (Cannot be combined with Option X).
I2 = Tamper-proof Cap, transparent (Cannot be combined with Option X).
L = Auxiliary Switch, instant transfer. 7012 only (notes 2 & 6).
LL = Two Aux. Switches, instant transfer. On Model 7014 Factory Installed Only. (notes 2 & 6)
M = Dust-tight Gasketing (notes 4 & 5).
P = Octal Plug Adapter. Can be combined only with options I1,I2. M, S, X, or Y1. (note 4).
S = Dial Stops.
T = Auxiliary Switch, two-step timing (notes 2 & 6).
V = Transient/Surge Protection (for DC coil voltage only).
X = Panelmount includes hardware and adjustment for horizontal operation (note 4)
Y1 = Horizontal testing, for horizontal operation without panel mounting (note 4).
Y2 = Horizontal testing, with Compensating Spring for vertical operation (note 4).

Notes:
1. Cannot be combined with B, P or X Options
2. Cannot be combined with B, P or Y2 Options
3. Cannot be combined with GZ, H, I1, I2, K, W or Y1 Options
4. Not Avail. on 4-Pole Models
5. Not Available with L, T or LL options.
6. Not Available on hermetically sealed units.
* Sized to accommodate one L or T Auxiliary Switch
** Not available on 7032 model.
† Available with letter graduated dials only. Upper end of time range may be twice the value shown
†† 120 cycles = 2 sec.

Ordering Options — Can only be ordered as factory installed options (Dimensions, where shown, are in inches)

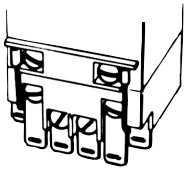

A1 – Single Quick-Connect Terminals

A2 – Double Quick-Connect Terminals

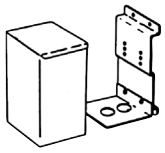

B – Plug-In Connectors

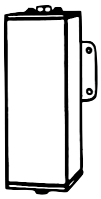

GZ – Metal Enclosure

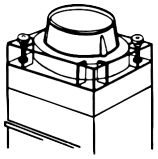

With knockouts for bottom connection.
3.16" W x 3.84" D x 7.63"H

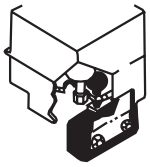

H – Hermetically Sealed Enclosure

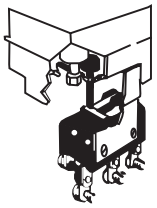

I – Tamper-Proof Cover

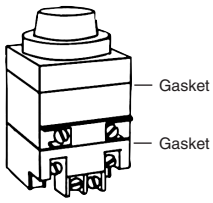

L – Auxiliary Switch

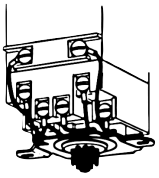

LL – Auxiliary Switch

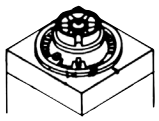

M – Dust tight

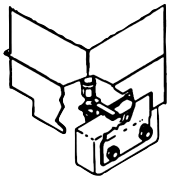

P – Octal Plug Adapter

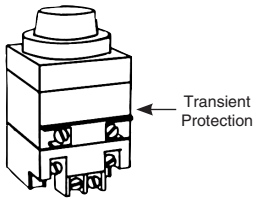

S – Dial Stops

T – Auxiliary Switch

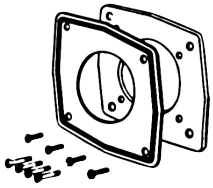

V – Transient/Surge Protection

X – Panelmount Kit

Mounting hardware included.

AGASTAT E7000 Series, Nuclear Qualified Time Delay Relays

Seismic and Radiation Tested

In order to satisfy the growing need for electrical control components suitable for class 1E service in nuclear power generating stations, AGASTAT timing relays have been tested for three applications. These E7000 Series electropneumatic devices have demonstrated compliance with the requirements of IEEE Standards 323-1974 (Standard for Qualifying Class 1E Equipment for Nuclear Power Generating Stations) and IEEE Standard 344-1975 (Seismic Qualifications for Nuclear Power Generating Stations). Testing was also referenced to ANSI/IEEE C37.98 (formerly IEEE Standard 501-1978, Standard for Seismic Testing of Relays).

The present E7000 Series design has evolved over 40 years of continual field use in a wider range of industrial applications. On-Delay, Off-Delay and Four-Pole versions are available for use with a choice of 23 coil voltages, as well as time delay adjustment to as long as 60 minutes.

Test Procedure

Test Procedure

AGASTAT timing relay Models E7012, E7022, E7014 and E7024 were tested in accordance with the requirements of IEEE STD. 323-1974 (Standard for Qualifying Class 1E Equipment for Nuclear Power Generating Stations), IEEE STD. 344-1975 (Seismic Qualification for Nuclear Power Generating Stations) and referenced to ANSI/EEE C37.98 (formerly IEEE Standard 501-1978, Standard for Seismic Testing of Relays). The relays were tested according to parameters which in practice, should encompass the majority of applications. Documented data applies to timing relays which were mounted on rigid test fixtures. The following descriptions of the tests performed are presented in their actual sequence.

Baseline Performance

In addition to aging tests, a series of baseline tests were conducted before, and immediately after each aging sequence:

- Pull-in Voltage
- Drop-out Voltage
- Dielectric Strength at 1650V 60Hz
- Insulation Resistance
- Operate Time (milliseconds)
- Recycle Time (milliseconds)
- Time Delay (seconds)
- Repeatability (percent)
- Contact Bounce (milliseconds at 28VDC, 1 amp)
- Contact Resistance (milliohms at 28VDC, 1 amp)

Data was measured and recorded and used for comparison throughout the qualification test program in order to detect any degradation of performance.

Radiation Aging

Relays were subjected to a radiation dosage of 2.0 x 10^5 Rads, which is considered to exceed adverse plant operating requirements for such areas as auxiliary and control buildings.

Cycling with Load Aging

The radiated units were then subjected to 27,500 operations at accelerated rate, with one set of contacts loaded to 120VAC, 60Hz at 10 amps; or 125VDC at 1 amp, and the number of mechanical operations exceeding those experienced in actual service.

Temperature Aging

This test subjected the relays to a temperature of 100°C for 42 days, with performance measured before and after thermal stress.

Seismic Aging

Sufficient interactions were performed at levels less than the fragility levels of the devices in order to satisfy the seismic aging requirements of IEEE STD 323-1974 and IEEE STD 344-1975.

Seismic Qualification

Artificially aged relays were subjected to simulated seismic vibration, which verified the ability of the individual device to perform its required function before, during and/or following design basis earthquakes. Relays were tested in the non-operating, operating and transitional modes.

Hostile Environment

Since the timing relays are intended for use in auxiliary and control buildings, and not in the reactor containment areas, a hostile environment test was performed in place of the Loss of Coolant Accident (LOCA) test. Relays were subjected to combination extreme temperature/humidity plus under/over voltage testing to prove their ability to function under adverse conditions even after having undergone all the previous aging simulation and seismic testing. The devices were operated at minimum and maximum voltage extremes: 85 and 120 percent of rated voltage for AC units, and 80 and 120 percent of rated voltage for DC units, with temperatures ranging from 40°F to 172°F at 95 percent relative humidity.

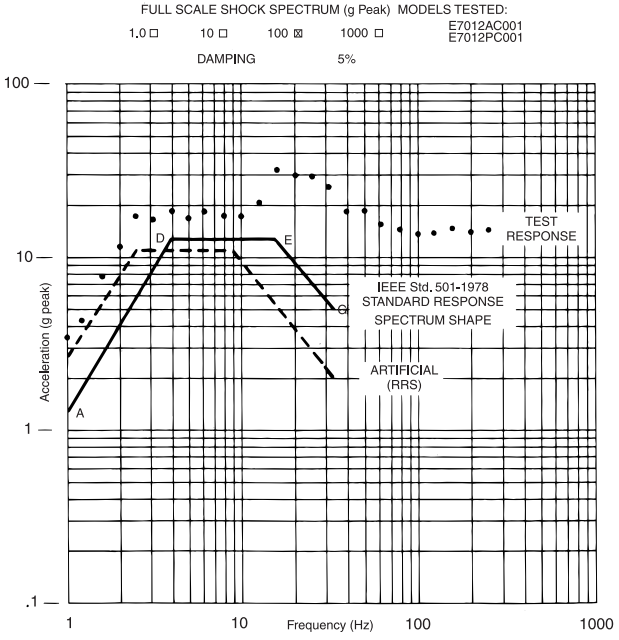

Figure 1. Response Spectrum, Transitional Mode

The SRS shape (at 5 percent damping), is defined by four points:

- point A = 1.0 Hz and an acceleration equal to 25 percent of the Zero Period Acceleration
- point D = 4.0 Hz and 250 percent of the ZPA
- point E = 16.0 Hz and 250 percent of the ZPA
- point G = 33.0 Hz and a level equal to the ZPA

AGASTAT E7000 Series, Nuclear Qualified Time Delay Relays (Continued)

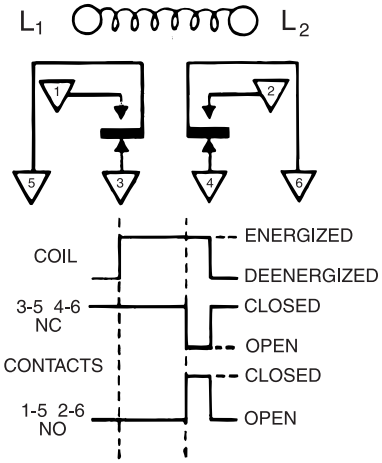

Operation

Two basic operating types are available: **On-delay** models provide a delay period on energization, at the end of which the switch transfers the load from one set of contacts to another. Deenergizing the unit during the delay period immediately recycles the unit, readying it for another full delay period on reenergization.

In **off-delay** models the switch transfers the load immediately upon energization, and the delay period does not begin until the unit is deenergized. At the end of the delay period the switch returns to its original position. Reenergizing the unit during the delay period immediately resets the timing, readying it for another full delay period on deenergization. No power is required during the timing period.

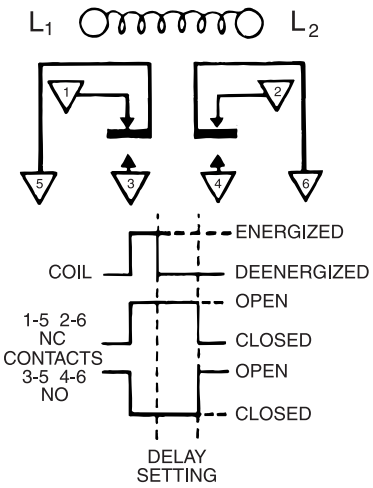

On-Delay Models, E7012

(Delay on pick-up)

Off-Delay Models, E7022

(Delay on drop-out)

Applying for at least 50 msec voltage to the coil (L1-L2) starts a time delay lasting for the preset time. During this period the normally closed contacts (3–5 and 4–6) remain closed. At the end of the delay period the normally closed contacts break and the normally open contacts (1–5 and 2–6) make. The contacts remain in this transferred position until the coil is deenergized, at which time the switch instantaneously returns to its original position.

Deenergizing the coil, either during or after the delay period, will recycle the unit within .050 second. It will then provide a full delay period upon reenergization, regardless of how often the coil voltage is interrupted before the unit has been permitted to "time-out" to its full delay setting.

Applying voltage to the coil (for at least .050 second) will instantaneously transfer the switch, breaking the normally closed contacts (1–5 and 2–6), and making the normally open contacts (3–5 and 4–6). Contacts remain in this transferred position as long as the coil is energized. The time delay begins immediately upon deenergization. At the end of the delay period the switch returns to its normal position.

Reenergizing the coil during the delay period will immediately return the timing mechanism to a point where it will provide a full delay period upon subsequent deenergization. The switch remains in the transferred position.

Four Pole Models, E7014, E7024

With the addition of an extra switch block at the bottom of the basic units, this version of the E7000 Series offers four pole switch capacity with simultaneous timing or two-step timing. The two-step operation is achieved by factory adjustment to your specifications.

AGASTAT E7000 Series, Nuclear Qualified Time Delay Relays (Continued)

Time Delay Information

All units are furnished with dials in linear increments covering the range selected. (See "Catalog Number Code"). In addition, ranges B through K provide non-linear adjustment from .2 second to the beginning of the linear zone.

Repeat Accuracy

Repeat accuracy at any fixed temperature is defined as:

*The repeat accuracy deviation (A_R) of a time-delay relay is a measure of the maximum deviation in the time-delay that will be experienced in successive operations at any particular time setting of the relay and for any particular operating voltage or current.

Repeat accuracy is obtained from the following formula:

$$A_R = \pm 100 \frac{(T_1 - T_2)}{(T_1 + T_2)}$$

Where —
T_1 = Maximum time delay.
T_2 = Minimum time delay.

*NEMA part ICS 2-218.02

Repeat accuracy at any fixed temperature is ± 10% of setting.

The first time delay afforded by units with H (3 to 30 minutes) and I (6 to 60 minutes) time ranges may be up to 15% longer than subsequent delays, due to coil temperature rise.

Dial position error is not included in the repeat accuracy specification above.

Delay Setting

Dial graduations are provided to minimize the time required to set the unit to a specific delay. Rotate the dial clockwise to increase the delay; counter-clockwise to decrease it.

The following procedure is recommended if the unit must be set to a very precise delay value:

1. Set dial to desired time delay. (On letter-graduated units, this requires an approximation of a percentage value between the arrowhead "▼" on the dial, which provides minimum time, and the letter "E," which provides maximum time.)
2. Record as many time delays as required to establish a stable average.
3. If the recorded average delay is shorter than the desired time, turn dial slightly clockwise; if it is longer, turn dial counter-clockwise.
4. Repeat step 2 after each adjustment, until required delay is recorded.

Because of the variety of environments in which time delay relays are applied, we recommend a re-check of the time delay after approximately three hours of operation. If any change from the initial time setting is apparent, the relay should be reset to the desired delay. The time delay accuracy should then be monitored on a monthly basis for several months, and if no substantial change in time delay has taken place, the frequency of checking may be reduced. It is recommended that this procedure be incorporated in the Operating Instructions for your equipment.

Contact Ratings — Nuclear

Resistive at 125 VDC. . . . . 1.0 Amp
Resistive at 120 VAC 60 Hz. . . 10.0 Amp

Contact Ratings — Non-Nuclear

Contact Capacity in Amps
(Resistive Loads)

Contact Voltage	Min. 100,000 Operations
30VDC	15.0
110VDC	1.0
120V 60Hz	20.0
240V 60 Hz	20.0
480V 60 Hz	12.0

Four pole models add approximately 1-1/4" to the maximum height of the basic model, approximately 1/8" to the depth. They are designed for vertical operation only.

Timing Adjustment

The AGASTAT E7000 Series is the first electropneumatic timer to offer the ease of adjustment and resetting of a graduated dial head. Discrete ranges covering a total span from .1 second to 60 minutes are available. (See table on page 12-20.) Each has its own graduated, clearly identified dial. Timing is set by simply turning the dial to the desired time value. In the zone of approximately 25° separating the high and low ends of timing ranges A, D, E, and K, instantaneous operation (no time delay) will occur. All other ranges produce an infinite time delay when the dial is set in this zone.

(DC)	80-110	80-110	80-110	80-110	80-110

*All coils may be operated on intermittent duty cycles at voltages 10% above listed maximums (Intermittent Duty = Maximum 50% duty cycle and 30 minutes "ON" time.)

REPLACEMENT SCHEDULE

The qualified life of this unit is 25,000 operations or 10 years from the date of manufacture, whichever occurs first.

Contact ratings as listed under the UL Component Recognition Program for 100,000 operations (Per pole) —
10 Amps, resistive, 240 VAC;
1/4 horsepower, 120 VAC/240 VAC;
15 Amps, 30 VDC;
5 Amps, General Purpose, 600 VAC

Coil Data —
All units draw approximately 8 watts power at rated voltage.

The operating voltage range for AC relays is 85 to 110 percent of nominal rated value.

AC units drop-out at approximately 50% of rated voltage.

The operating range of DC relays is 80 to 110 percent of nominal rated value.

DC units drop-out at approximately 10% of rated voltage.

All units may be operated on intermittent duty cycles (50% on/off, maximum 30 minutes on) at voltages 10% above the listed maximums.

Approximate Weight —
Model E7012 and E7022 with AC Coils — 2.13 lbs.
Model E7012 and E7022 with DC Coils — 2.25 lbs.
Model E7014 and E7024 with AC Coils — 2.43 lbs.
Model E7014 and E7024 with DC Coils — 2.57 lbs.
(Weight may vary slightly with particular coil voltage.)

Terminals —
Standard screw terminals (#8 – 32 truss head screws supplied) are located on the front of the unit, with permanent schematic markings. Barrier isolation is designed to accommodate spade or ring-tongue terminals with spacing to meet industrial control specifications.

Note: TE Connectivity Corporation cannot recommend the use of its products in the containment areas of Nuclear Power Generating Stations.

The date of manufacture can be found in the first four (4) digits of the serial number on the nameplate:

First two digits indicate the year — XX

Second two digits indicate the week. — XX

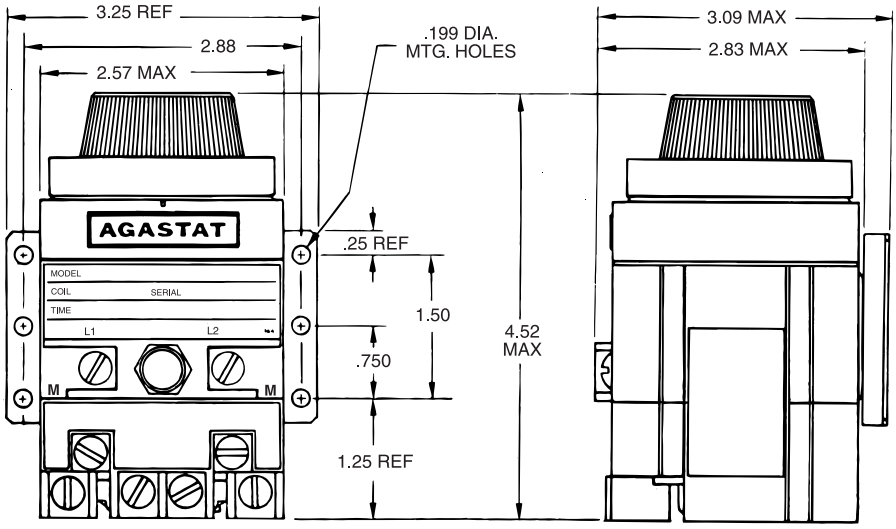

Example: Date code 8014: 80 indicates 1980; 14 indicates the week of April 2 through 8.

** **Configuration Code**
The Configuration Code is a suffix to the Model Number which provides a means of identification. When a significant product change is introduced, the Configuration code and specification sheets will be revised. (001, 002, 003, 004, etc.).

Relay Classifications Control Code Summary

Configuration Control

Product	Code – 001	Code – 002	Code – 003	Code – 004
E7000	Contains all materials present in original qualification testing.	Sept. 1981 — Elastomer gasket material change to improve thermal aging properties. Material changed for Buna-N or Neoprene to Neoprene only.	March 1989 — Paint change to timing head portion of relay. New paint: Sherwin-Williams E61YC37 primer and PPG W48392 silver polyester top coat.	Dec. 1991 — Paint change to timing head portion of relay. New paint: Prime coatings No. 28032 Enamel. No primer is used with this finish.

Configuration Code: The Configuration code is a suffix to the Model Number which provides a means of identification. When a significant product change is introduced, the Configuration code and specification sheets will be revised. (001, 002, 003, 004, etc.)

PPG is a trademark of PPG Industries.
Sherwin-Williams is a trademark of The Sherwin-Williams Company.

AGASTAT EGP/EML/ETR Series, Nuclear Qualified Control Relays

Seismic and Radiation Tested

In order to satisfy the need for electrical control components suitable for class 1E service in nuclear power generating stations, AGASTAT control relays have been tested for these applications. Series EGP, EML and ETR have demonstrated compliance with the requirements of IEEE Standards 323-1974 (Standard for qualifying Class 1E Equipment for Nuclear Power Generating Stations) and IEEE Standard 344-1975 (Seismic Qualification for Nuclear Power Generating Stations). Testing was also referenced to ANSI/ IEEE C37.98 (formerly IEEE Standard 501-1978, Standard for Seismic Testing of Relays).

The design of Series EGP, EML and ETR control relays has evolved over 20 years of continual use in a wide range of industrial applications. Control Relay, Magnetic Latch and Timing Relay versions are available for use with a choice of coil voltages, as well as an internal fixed or adjustable potentiometer in the Series ETR time delay version.

Test Procedure

Test Procedure

AGASTAT control relay Series EGP, EML and ETR were tested in accordance with the requirements of IEEE STD. 323-1974 (Standard for Qualifying Class 1E Equipment for Nuclear Power Generating Stations), IEEE STD. 344-1975 (Seismic Qualification for Nuclear Power Generating Stations) and referenced to ANSI/IEEE C37.98 (formerly IEEE Standard 501-1978, Standard for Seismic Testing of Relays). The relays were tested according to parameters which in practice, should encompass the majority of applications. Documented data applies to relays which were mounted on rigid test fixtures. The following descriptions of the tests performed are presented in their actual sequence.

Baseline Performance

In addition to aging tests, a series of baseline tests were conducted before, and immediately after each aging sequence:

- Pull-in Voltage
- Drop-out Voltage
- Dielectric Strength at 1650V 60Hz
- Insulation Resistance
- Operate Time (milliseconds)
- Recycle Time (milliseconds)
- Time Delay (seconds) } Series ETR only
- Repeatability (percent) }
- Contact Bounce (milliseconds at 28VDC, 1 amp)
- Contact Resistance (milliohms at 28VDC, 1 amp)

Data was measured and recorded and used for comparison throughout the qualification test program in order to detect any degradation of performance.

Radiation Aging

Relays were subjected to a radiation dosage of 2.0 x 10^5 Rads, which is considered to exceed adverse plant operating requirements for such areas as auxiliary and control buildings.

Cycling with Load Aging

The radiated units were then subjected to 27,500 operations at accelerated rate, with one set of contacts loaded to 120VAC, 60Hz at 10 amps; or 125VDC at 1 amp, and the number of mechanical operations exceeding those experienced in actual service.

Temperature Aging

This test subjected the relays to a temperature of 100°C for 42 days, with performance measured before and after thermal stress.

Seismic Aging

Sufficient interactions were performed at levels less than the fragility levels of the devices in order to satisfy the seismic aging requirements of IEEE STD 323-1974 and IEEE STD 344-1975.

Seismic Qualification

Artificially aged relays were subjected to simulated seismic vibration, which verified the ability of the individual device to perform its required function before, during and/or following design basis earthquakes. Relays were tested in the non-operating, operating and transitional modes.

Hostile Environment

Since the timing relays are intended for use in auxiliary and control buildings, and not in the reactor containment areas, a hostile environment test was performed in place of the Loss of Coolant Accident (LOCA) test. Relays were subjected to combination extreme temperature/humidity plus under/over voltage testing to prove their ability to function under adverse conditions even after having undergone all the previous aging simulation and seismic testing. The devices were operated at minimum and maximum voltage extremes: 85 and 120 percent of rated voltage for AC units, and 80 and 120 percent of rated voltage for DC units, with temperatures ranging from 40°F to 172°F at 95 percent relative humidity.

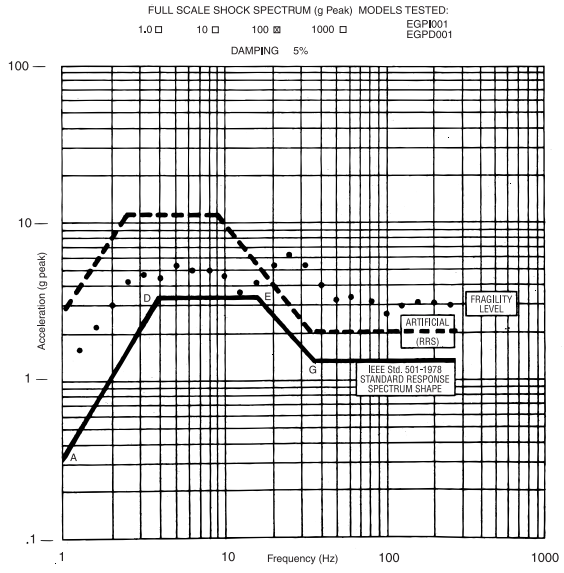

Figure 1. Model EGP, Response Spectrum, Non-Operate Mode

The SRS shape (at 5 percent damping), is defined by four points:

- point A = 1.0 Hz and an acceleration equal to 25 percent of the Zero Period Acceleration (ZPA)
- point D = 4.0 Hz and 250 percent of the ZPA
- point E = 16.0 Hz and 250 percent of the ZPA
- point G = 33.0 Hz and a level equal to the ZPA

Specimen 13, 15 & 16 (EGP Series)
Relay State: Non-Operate Mode (De-ener.)
Test Run No. 318, 319, (205-206), (198-199)
Axis (H + V):
Composite of FB/V-, SS/V, FB/V+ X .707
Due to 45° inclination of test machine.

Additional Seismic Response Curves are available on request.

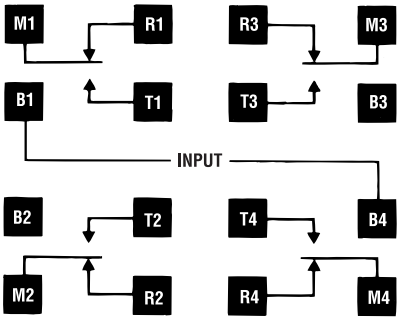

Relay State: Non-Operate Mode (De-ener.)
Test Run No. 318, 319, (205-206), (198-199)

AGASTAT EGP/EML/ETR Series, Nuclear Qualified Control Relays (Continued)

Operation

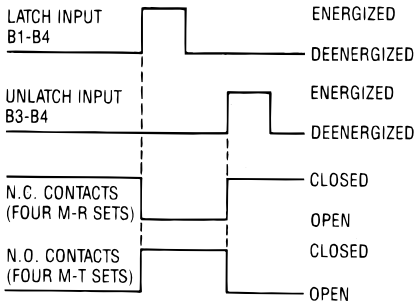

Series EGP
Power Relay

Applying a voltage to the coil (B1-B4) for more than 50 msec energizes the coil and instantaneously transfers the switch, breaking the normally closed contacts (M1-R1, M2-R2, M3-R3, M4-R4) and making the normally open contacts (M1-T1, M2-T2, M3-T3, M4-T4). The contacts remain in this transferred position until the coil is deenergized, at which time the switch instantaneously returns the contacts to their original position.

Series EML
Magnetic Latch

Application of a voltage to the latching input (B1-B4) will cause the relay to latch in (Make the N.O. Contacts, break the N.C. Contacts). When this voltage is removed, the relay will remain in this “Latched” condition. Application of a voltage to the un-latching input (B3-B4) will cause the relay to dropout (Break the N.O. Contacts, make the N.C. Contacts). When this voltage is removed, the relay will remain in this “Unlatched” condition.

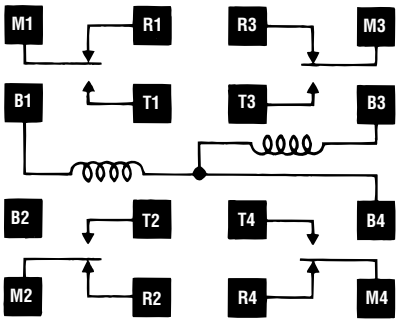

Wiring Diagram (Wiring and Connections)

The ML relay has three terminals for the windings: latching winding between terminals B1 and B4, un-latching winding between terminals B3 and B4.

The ML Relay is not symmetrical due to its three coil connections.

The relays are normally delivered polarized so that terminal B4 carries the negative voltage. To reverse the polarity, a deenergize/energize cycle should be carried out using a voltage 50% greater than the normal rating.

Continuous Duty Wiring

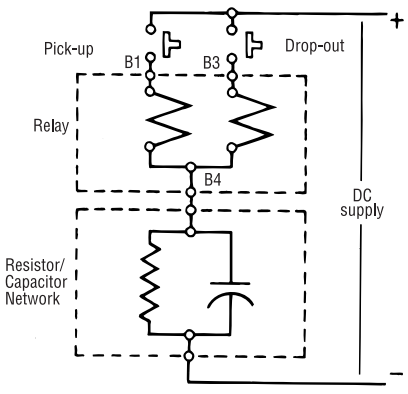

Since the double wound coil does not have a continuous duty rating, voltage pulses to the coils should not exceed a ratio of 40% on, to 60% off, with maximum power-on periods not to exceed 10 minutes.

If continuous energizing only is available, a resistor/capacitor network should be connected as shown below. In this case the shortest time between two operations must not be less than 5 seconds.

The relay will always assume the energized position in the event of both windings being energized simultaneously.

It is advisable not to put another load in parallel with the windings of the ML relay.

ML Series Relay for DC Operation with a Resistor/Capacitor Network

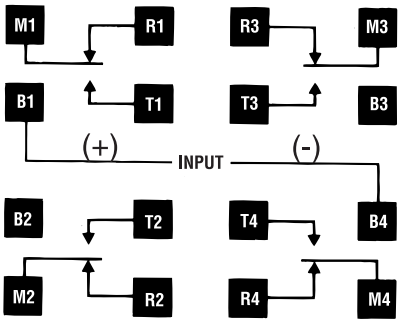

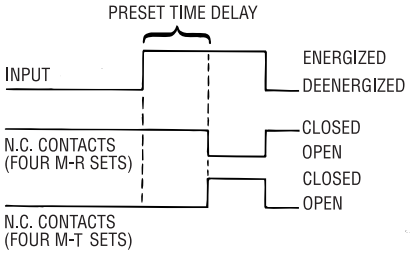

R-C Values

Nominal Voltage VDC	R		C	
	Ohms ±5%	Watts	UF	VDC
12	62	2	5000	15
24	240	2	2000	50
48	1000	2	500	100
125	6200	2	150	150

Series ETR
Time Delay Relay
(Delay on Energization)

Applying a voltage to the input terminals (B1-B4) for more than 50 msec starts a time delay lasting for the preset time period. During this period the normally closed contacts (Four M-R sets) remain closed. At the end of the delay period, the normally closed contacts break and the normally open contacts (Four M-T sets) make. The contacts remain in this position until the relay is deenergized, at which time the contacts instantaneously return to their normal position. Deenergizing the relay, either during or after the delay period will recycle the unit within .075 second. It will then provide a full delay period upon reenergization, regardless of how often the voltage is interrupted before the unit has been permitted to “time-out” to its full delay setting.

Specifications

Contact Ratings — Series EGP/EML/ETR —

Contact Capacity in Amperes (Resistive)

Contact Voltage	Min. 1,000,000 Operations
24 Vdc	10.0 Amps
125 Vdc	1.0 Amp
120 Vac, 60 Hz	10.0 Amps
240 Vac, 60 Hz	7.5 Amps

Contact Ratings, UL — Series EGP/EML Only —
Contact ratings as Listed under the Underwriters Laboratory Component Recognition Program. (Two poles per load):
1/3 Horsepower, 120 Vac
10 Amps, General Purpose, 240 Vac
120 Vdc, 1.0 Amp

Mechanical Life — Series EGP/EML/ETR —
25,000 mechanical operations

Approximate Weight — Series EGP/EML/ETR —
1 lb.

Transient Protection — Series ETR Only — A 1500 volt transient of less than 100 microseconds, or 1000 volts of less than 1 millisecond will not affect timing accuracy

Timing Adjustment — Series ETR Only —
Internal Fixed
Internal Potentiometer

Time Ranges — Series ETR Only —
A — .15 to 3 sec.
B — .55 to 15 sec.
C — 1 to 30 sec.
D — 2 to 60 sec.
E — 4 to 120 sec.
G — 10 to 300 sec.
I — 2 to 60 min.
N — 1 to 30 min.

Repeat Accuracy — Series ETR Only —
The repeat accuracy deviation (A_R) of a time-delay relay is a measure of the maximum deviation in the time-delay that will be experienced in five successive operations at any particular time setting of the relay and over the operating voltage and temperature range specified. Repeat accuracy is obtained from the following formula:

$$A_R = \pm 100 \frac{(T_1 - T_2)}{(T_1 + T_2)}$$

Where —
T_1 = Maximum Time Delay
T_2 = Minimum Time Delay

The date of manufacture can be found in the first four (4) digits of the serial number on the nameplate:

First two digits indicate the year — XX

Second two digits indicate the week. — XX

Example: In the date code 7814 below: "78" indicates the year 1978; "14" indicates the 14th week (or April 3 through April 7).

Model	
Coil	125 VDC
Serial	78140028

Note: TE Corporation does not recommend the use of its products in the containment areas of Nuclear Power Generating Stations.

REPLACEMENT SCHEDULE
Series EGP/EML/ETR

The qualified life of these relays is 25,000 electrical operations or 10 years from the date of manufacture, whichever

Product Facts

- **Occupies very small panel space**
- **May be mounted singly, in continuous rows or in groups**
- **Available with screw terminal molded socket.**
- **4 SPDT contacts**
- **Magnetic blowout device option increases DC current carrying ability approximately ten times for both N.O. and N.C. contacts. In both AC and DC operation, the addition of the device will normally double the contact life, due to reduced arcing.**
- **File E15631, File LR29186**

Users should thoroughly review the technical data before selecting a product part number. It is recommended that users also seek out the pertinent approvals files of the agencies/laboratories and review them to ensure the product meets the requirements for a given application.

GP/TR Design Features

Among the advances AGASTAT control relays offer over existing designs is a unique contact operating mechanism. An articulated arm assembly amplifies the movement of the solenoid core, allowing the use of a short stroke coil to produce an extremely wide contact gap. The long support arms used in conventional relays are eliminated. Both current capacity and shock/vibration tolerance are greatly increased, as well as life expectancy.

Design/Construction

AGASTAT control relays are operated by a moving core electromagnet whose main gap is at the center of the coil.

The coil provides a low mean turn length and also assists heat dissipation. Since the maximum travel of the electromagnet does not provide optimum contacts movement, an amplifying device has been designed. This consists of a W-shaped mechanism, shown in Figure 1. When the center of the W is moved vertically the lower extremities move closer to each other as can be seen in the illustration. The center of the W mechanism is connected to the moving core of the electromagnet and the two lower points are connected to the moving contacts.

Two of these mechanisms are placed side-by-side to actuate the four contacts sets of the relay. These arms act as return springs for their corresponding contacts.

The mechanical amplification of the motion of the electromagnet permits a greater distance between the contacts, while the high efficiency of the electromagnet provides a nominal contact force in excess of 100 grams on the normally open contacts.

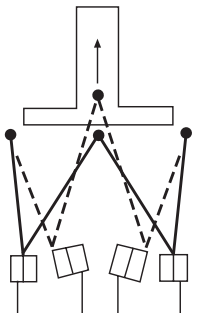

All the contacts are positioned well away from the cover and are well ventilated and separated from each other by insulating walls.

The absence of metal-to-metal friction, the symmetrical design of the contact arrangement and the lack of heavy impacts provides a mechanical life of 100,000,000 operations.

For use in AC circuits, the relay is supplied with a built-in rectification circuit, thus retaining the high DC efficiency of the electromagnet. The current peak on energizing is also eliminated and consequently the relay can operate with a resistance in series (e.g. for high voltages or for drop-out by shorting the coil). The use of the rectification circuit offers still other advantages. The same model can operated at frequencies ranging from 40 to 400 cycles. Operation of the relay is possible even with a low AC voltage.

The plastic dust cover has two windows to facilitate cooling and also to allow direct mounting of the relay.

Figure 1 — Illustration of Amplification

This diagram illustrates amplification obtained by the articulated operating mechanism.

Note: Seismic & radiation tested EGP, and ETR models are available. Consult factory for detailed information.

Load Life Curve

Initial Dielectric Strength —
Between non-connected terminals — 2,000V rms, 60 Hz
Between non-connected terminals & relay yoke — 2,000V rms, 60 Hz

Initial Insulation Resistance —
Between non-connected terminals — 109 ohms at 500VDC
Between non-connected terminals & relay yoke — 109 ohms at 500VDC

Coil Data

Voltage — 24, 120 & 220VAC, 60 Hz; Add series resistor for 380-440VDC; 12, 24, 48, 125 & 250VDC

Duty Cycle — Continuous

Nominal Coil Power —
6VA for AC coils; 6W for DC coils. There is no surge current during operation.

Coil Operating Voltage

	DC					AC, 50/60Hz		
Nominal Coil Voltage	12	24	48	125	250	24	120	220
Minimum Pick-up Voltage at 20°C	9	18	36	94	187	19	92	175
Minimum Pick-up Voltage at 40°C	9.5	19	38	100	200	20	102	188
Maximum voltage for continuous use	13.5	27	53	143	275	27	137	245

For 380VAC – Use 6800 ohms 4 watt resistor in series with 220VAC relay.

For 440VAC – Use 8200 ohms 6 watt resistor in series with 220VAC relay.

Drop-out voltage is between 10% and 40% of the nominal voltages for both DC and AC (For example: in a 120 VAC unit, drop-out will occur between 12 and 48 volts.) DC relays will function with unfiltered DC from a full-wave bridge rectifier.

Operate Data @ 20°C

Operate Time at Rated Voltage —
Between energizing and opening of normally closed contacts — less than 18 milliseconds on AC and less than 15 milliseconds on DC.

Release Time —
Between energizing and closing of normally open contacts — less than 35 milliseconds on AC and less than 30 milliseconds on DC.
Between de-energizing and opening of normally open contacts — less than 70 milliseconds on AC and less than 8 milliseconds on DC.
Between de-energizing and closing of normally closed contacts — less than 85 milliseconds on AC and less than 25 milliseconds on DC.

Environmental Data

Operating Temperature Range: 0°C to +60°C.

Vibration: Single axis fragility curve data are available on request at frequencies from 5 Hz. to 33 Hz.

Shock: The relay, when kept energized by means of one of its own contact sets, will withstand 40g shock load when operating on DC, and 150g shock load on AC.

Mechanical Data

Mounting Terminals —
16 flat base pins. Screw terminal sockets are available.

Wire Connection — The 16 flat pins are arranged in four symmetrical rows of four pins; the pitch in both directions being .394". Connection may be made to the relay by soldering. Sockets are available with screw terminals.

The internal wiring of the relay is also symmetrical as shown in the adjacent figure, allowing the relay to be inserted into the socket in either of two positions. Terminals B2 and B3 are provided as extra connections for special applications.

Weight —
10.9 oz. (308g) approximately

AGASTAT GP/TR Series, 10 Amp Control Relay, Non-latching, Latching & Timing Versions (Continued)

TR Series

Product Facts

- **8 timing ranges**
- **4 SPDT contacts**
- **Magnetic blowout device option increases DC current carrying ability. In both AC and DC operation, the addition of the device will normally increase the contact life, due to reduced arcing.**

TR Design/Construction

Couples an advanced electromechanical design with a field-proven solid-state timing network.

This unique circuit also eliminates the need for supplementary temperature-compensation components, affording stability over a broad operating temperature range. It also provides transient protection and protection against premature switching of the output contacts due to power interruption during timing.

Timing Specifications

Operating Mode —
On-Delay (Delay on energization)

Timing Adjustment —
Internal fixed or internal potentiometer

Timing Ranges —
.15 to 3 sec.
.55 to 15 sec.
1 to 30 sec.
2 to 60 sec.
4 to 120 sec.
10 to 300 sec.
1 to 30 min.
2 to 60 min.

Accuracy —
Repeat — ±2% as fixed temperature and voltage
Overall — ±5% over combined rated extremes of temperature and voltage

Reset Time — 75ms.

Contact Data @ 25°C

Arrangements — 4 Form C (4PDT)

Nominal Rating — 10A @ 120VAC

Contact Pressure —
Between movable and normally closed contacts — 30 g, typical.
Between movable and normally open contacts — 100 g, typical.

Expected Life —
Mechanical — 100 million operations
Electrical — See load/life graph

Initial Dielectric Strength —
Between terminals and case and between mutually-isolated contacts — 2,000VAC

Initial Insulation Resistance —
Between non-connected terminals — 109 ohms at 500VDC
Between non-connected terminals & relay yoke — 109 ohms at 500VDC

Coil Data

Voltage — 120VAC, 50-60 Hz.; 24 & 125VDC

Transient Protection —
1,500 volt transient of less than 100 microseconds, or 1,000 volts or less

Environmental Data

Operating Temperature Range —
0°C to +50°C

Mechanical Data

Mounting Terminals —
16 flat base pins. Screw terminal sockets are available.

Weight — 11 oz. (311g) approximately.

Ordering Information

Typical Part No. ▶	TR	1	4	B	1	A	N

1. Basic Series:
TR = Timing control relay

2. Operation:
1 = On-delay

3. Output:
4 = 4PDT (4 form C)

4. Operating Voltage:
B = 24VDC
D = 215VDC
I = 120VAC, 50/60 Hz.

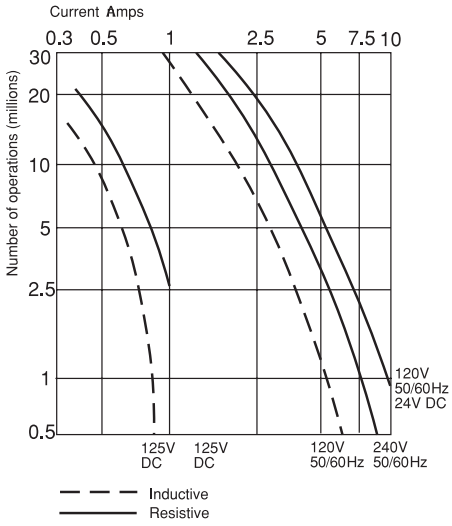

5. Timing Adjustment:
1 = Internal fixed.
3 = Internal potentiometer.

6. Timing Range:
A = .15 to 3 sec.
B = .55 to 15 sec.
C = 1 to 30 sec.
D = 2 to 60 sec.
E = 4 to 120 sec.
G = 10 to 300 sec.
I = 2 to 60 min.
N = 1 to 30 min.

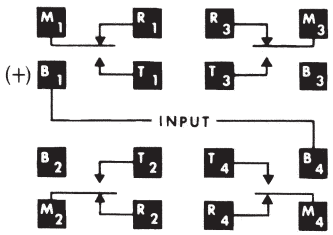

7. Options:
N = Magnetic blow-out device.

Accessories for GP/TR Series Control Relays

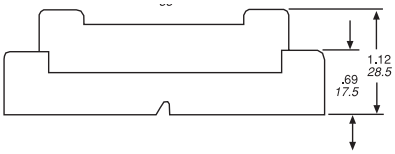

Front Connected Sockets

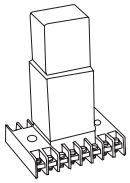

Cat. No. CR0001
With captive clamp terminals

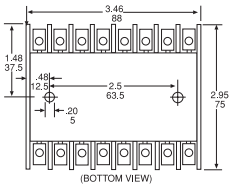

Cat. No. CR0002
With (#6) binding head screws

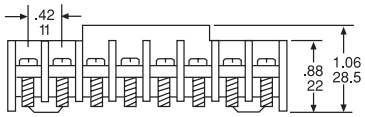

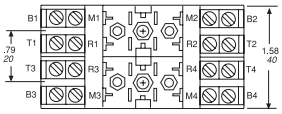

Cat. No. CR0095
With (#6) screw terminals

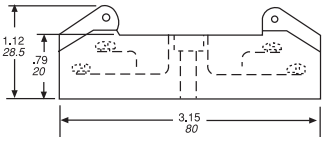

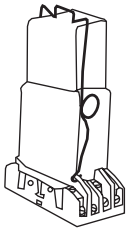

Cat. No. CR0067
With (#6) screw terminals

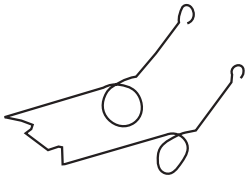

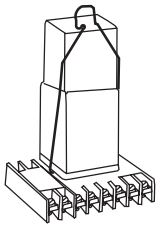

Hold Down (Locking) Springs

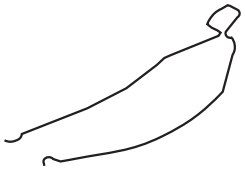

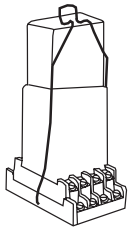

Cat. No. CR0069
For socket: CR0067

Cat. No. CR0070
For socket: CR0095

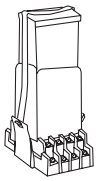

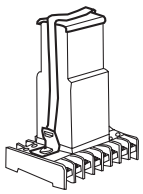

Cat. No. CR0111
For sockets: CR0001& CR0002

Heavy-duty Hold Down (Locking) Straps

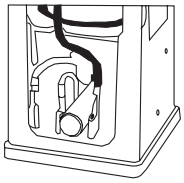

***Cat. No. CR0133**
For socket: CR0001 & CR0002

***Cat. No. CR0155**
For socket: CR0095

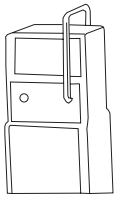

* Catalog number includes strap, strap plate and necessary brackets.

Magnetic Blowout Device

Cat. No. CR0190
Reduces arcing on the relay contacts when they make or break contact, either upon energizing or de-energizing, resulting in less contact degradation. Extends the life of the contact.

Extracting Handle

Cat. No. CR0179
Used to remove GP and TR units from mounting bases.

VCA Series, Single Phase, Undervoltage Relay

Product Facts

- **Automatic reset minimizes equipment downtime**
- **Fixed pickup point prevents low voltage start-up**
- **Adjustable dropout point protects against undervoltage operation**
- **Delayed dropout prevents nuisance tripping**
- **Compact, inexpensive design saves space, reduces cost**
- **Solid state circuitry for enhanced accuracy and long life**
- **LED indicates normal voltage condition**
- **File E60363**

Function

Single phase undervoltage relay

Sensing Specifications

Voltage Set-Point Adjustment — Internal potentiometer (screwdriver adjustable) with linear calibrated dial

Response Time — Depending on severity of undervoltage: 0.1 - 1 sec.

Accuracy —
Repeat Accuracy — ±0.2%
Overall Accuracy — ±1%

Output Data

Arrangement — 1 Form C (SPDT)

Rating — 7A @ 250VAC; 1/6 HP @ 250VAC; 300VA @ 120/240VAC; 3A @ 30VDC

Expected Mechanical Life — 10,000,000 operations

Expected Electrical Life — 100,000 operations at rated resistive load

Initial Dielectric Strength — Between Terminals and Case — 1,480V
Between Relay Contacts and Active Circuitry — 1,480V

Input Data

Voltage — 120VAC, 240VAC

Power Requirement — 4W max.

Transient Protection —
120VAC. . . . . 30 joules
240VDC . . . . . 30 joules
120VAC. . . . . 10 joules
120VDC . . . . . 10 joules

Environmental Data

Temperature Range —
Storage — -40°C to +85°C
Operating — -23°C to +55°C

Mechanical Data

Mounting — Panel mount with one #8 screw

Termination — 0.250 in (6.35) quick connect terminals

Status Indication — LED indicates normal voltage condition

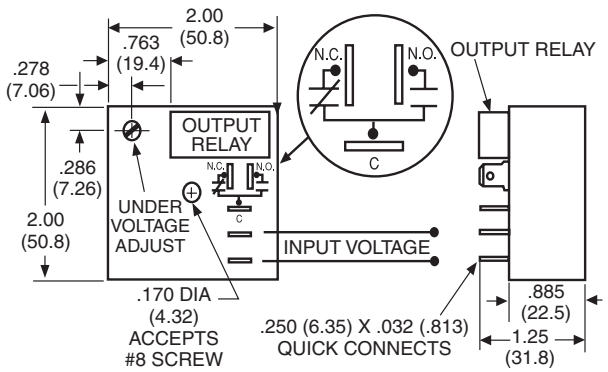

Weight — 3.2 oz. (90.7g) approximately

Ordering Information

SCB/SCC Series, Specification Grade Discrete Plug-in, Time Delay Relay

Product Facts

- **On-Delay, Off-Delay and Interval timing modes**
- **13 timing ranges from 0.1 sec. to 60 min.**
- **10A DPDT output contacts**
- **Knob, fixed or external timing adjustment.**
- **Rated for pilot duty**
- **Premium components**
- **File 3520, File E60363, File LR51332, File E60363 (SCC only)**

Timing Specifications

Timing Modes — On-Delay, Off-Delay and Interval

Timing Ranges — 6 to 180 cycles; 0.1 to 3 / 0.1 to 10 / 0.33 to 10 / 1 to 30 / 4 to 120 sec.; 0.33 to 10 / 1 to 30 / 2 to 60 min.; 0.33 to 10 hr. (All are +5%, –0% of maximum values).

Timing Adjustment — Knob or fixed time (internal fixed resistor) — all models; customer supplied external potentiometer or resistor — On-Delay and Interval models only.

Accuracy — Repeat Accuracy — ±0.5% ±0.004 sec. Overall Accuracy — ±2% max.

Reset Time — 25 ms.

Relay Operate Time — Off-Delay mode — 30 ms; Interval mode — 20 ms..

Relay Release Time — On-Delay mode only — 15 ms.

Users should thoroughly review the technical data before selecting a product part number. It is recommended that user also seek out the pertinent approvals files of the agencies/laboratories and review them to ensure the product meets the requirements for a given application.

Contact Data @ 25°C

Arrangements — 2 Form C (DPDT)

Rating — 10A @ 28VDC or 120VAC, resistive; 1/3 HP @ 120/240VAC; 345VA. Same polarity.

Expected Mechanical Life — 10 million operations

Expected Electrical Life — 500,000 operations, min., at rated resistive load

Initial Dielectric Strength — Between Terminals and Case — 1,000VAC plus twice the nominal voltage for one minute.

Input Data @ 25°C

Voltage — See Ordering Information section for details.

Power Requirement — 3W, max.

Transient Protection: Non-repetitive transients of the following magnitudes will not cause spurious operation of affect function and accuracy.

Operating Voltage	<0.1 ms	<1 ms

SCE Series, Specification Grade Discrete Plug-in, True Off-Delay Time Delay Relay

Product Facts

- **True Off-Delay timing modes**
- **Six time delays from 0.1 sec. to 10 min.**
- **10A SPDT or 5A DPDT output contacts**
- **Excellent repeat accuracy — typically better than ±1%**
- **8-pin octal plug.**

E15631, File LR51332

CAUTION: If unit has not been energized for several months, apply operating voltage for 20 minutes prior to initial time delay.

Timing Specifications

Timing Modes —
True Off-Delay — Upon application of operating voltage (min. 100ms), output relay contacts transfer. When operating voltage is removed, the time delay period is initiated. At the end of the delay period, output relay contacts release. If operating voltage is reapplied prior to expiration of the delay period, the delay will be cancelled and output relay contacts will remain transferred.

Timing Ranges —
0.1 to 3 / 0.5 to 15 / 1 to 30 / 4 to 120 / 10 to 300 sec.; 0.33 to 10 min.

Timing Adjustment —
Knob adjustment — Internal potentiometer with external knob adjustment. Maximum time calibrated with +10%, –0% of values shown below at rated voltage, at 68°F.
Fixed time — internal fixed resistor.

Users should thoroughly review the technical data before selecting a product part number. It is recommended that user also seek out the pertinent approvals files of the agencies/laboratories and review them to ensure the product meets the requirements for a given application.

Accuracy —
Repeat Accuracy — ±1
Overall Accuracy — ±5%

Reset Time — 30 ms. min.

Relay Operate Time — 30 ms.

- **Repeat Cycle timing mode**
- **Dual knobs for user adjustment of on and off times**
- **13 timing ranges from 0.1 sec. to 60 min.**
- **10A DPDT output contacts**
- **Exceptional immunity to line transients and noise**
- **Premium components enhance reliability**
- **Superior reset time of 24 msec.**

CE

Users should thoroughly review the technical data before selecting a product part number. It is recommended that user also seek out the pertinent approvals files of the agencies/laboratories and review them to ensure the product meets the requirements for a given application.

Timing Specifications

Timing Modes —

Repeat Cycle: Application of line voltage starts the pre-set OFF-time period Upon expiration of the period, the output relay is energized, its contacts transfer, and the pre-set ON-time period begins. At the end of this period the output relay is deenergized, and a new cycle begins. The OFF and ON cycles continue until power is removed. To reset the timer, input voltage must be removed for at least 25 ms.

Timing Ranges — OFF time and ON time ranges need not be the same. 6 to 180 cycles; 0.1 to 3 / 1 to 10 / 0.5 to 15 / 1 to 30 / 2 to 60 / 4 to 120 / 6 to 180 / 10 to 300 sec.; 0.33 to 10 / 0.5 to 15 / 1 to 30 / 2 to 60 min. (All are +10%, –1% of maximum values).

Timing Adjustment — Two internal potentiometers with external knobs.

Accuracy —
Repeat Accuracy — ±1% ±0.004 sec.
Overall Accuracy — ±2.25% max.

Reset Time — 25 ms. max. (between deenergization and reenergization with-out affecting accuracy.)

Relay Operate Time — 20 ms.

Relay Release Time — 15 ms.

Contact Data @ 25°C

Arrangements — 2 Form C (DPDT).

SSC Series, Specification Grade Discrete Plug-in, Time Delay Relay

Product Facts

- **On-Delay, Off-Delay and Interval timing modes**
- **13 timing ranges from 0.1 sec. to 60 min.**
- **10A DPDT output contacts**
- **Excellent repeatability of ±1% or better.**
- **Exceptional immunity to transients and noise.**
- **Wide operating temperature range.**
- **File 3520, File LR29186**

Users should thoroughly review the technical data before selecting a product part number. It is recommended that user also seek out the pertinent approvals files of the agencies/laboratories and review them to ensure the product meets the requirements for a given application.

Timing Specifications

Timing Modes — On-Delay, Off-Delay and Interval.

Timing Ranges — 6 to 180 cycles; 0.1 to 3 / 0.1 to 10 / 0.33 to 10 / 1 to 30 / 4 to 120 sec.; 0.33 to 10 / 1 to 30 / 2 to 60 min.; 0.33 to 10 hr. (All are +10%, –1% of maximum values).

Timing Adjustment — Knob or fixed time (internal fixed resistor) – all models; customer supplied external potentiometer or resistor – On-Delay and Interval models only.

Accuracy —
Repeat Accuracy — ±1% ±0.004 sec. at any combination of operating temperature and voltage.
Overall Accuracy — ±5.25% throughout operating temperature and voltage ranges.

Reset Time — 25 ms. (minimum deenergized interval for on-delay or off-delay models, or minimum required closure interval for interval models without affecting accuracy.)

Relay Operate Time — Off-Delay mode only: 35 ms.

Relay Release Time — On-Delay mode only: 20 ms.

Contact Data @ 25°C

Arrangements — 2 Form C (DPDT).

Rating — 10A @ 28VDC or 120VAC, resistive; 1/3 HP @ 120/240VAC.

Expected Mechanical Life — 10 million operations

Expected Electrical Life — 500,000 operations, min., at rated resistive load.

Initial Dielectric Strength — Between Terminals and Case — 1,000VAC plus twice the nominal voltage for one minute.

Input Data @ 25°C

Voltage — See Ordering Information section for details.

Power Requirement — 3W max.

Transient Protection — Non-repetitive transients of the following magnitudes will not cause spurious operation of affect function and accuracy.

Operating Voltage	<0.1 ms	<1 ms
12VDC	1,000V	240V*
12VDC	1,000V	240V*
24VAC/VDC	1,000V	240V*
48 VAC/VDC	1,000V	480V*
120 VAC/VDC	3,000V	2,500V*
240VAC	3,000V	2,500V*

*Minimum source impedance of 100 ohm

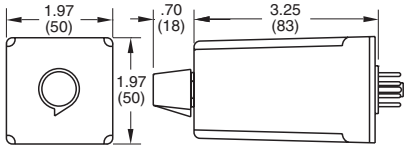

Environmental Data

Temperature Range —
Storage — -40°C to +85°C
Operating — -30°C to +65°C

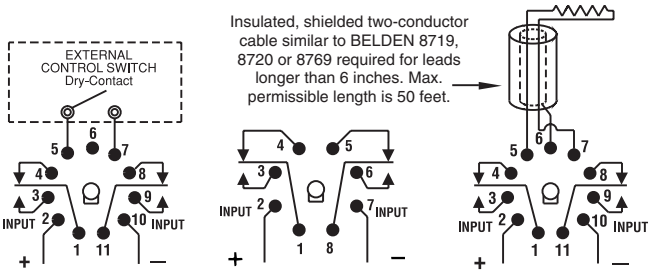

Mechanical Data

Mounting/Termination — 8- or 11-pin octal type plug. 8-pin types fit either 27E122 or 27E891, while 11-pin types fit 27E123 or 27E892.

Weight — 4 oz. (112g) approximately

Users should thoroughly review the technical data before selecting a product part number. It is recommended that user also seek out the pertinent approvals files of the agencies/laboratories and review them to ensure the product meets the requirements for a given application.

Timing Specifications

Timing Mode — On-Delay – VTM-1 in-line timing module is wired in series with the load circuit. Time delay is initiated when power is applied to the series network. Connecting a resistor across the center terminals provides tamper-proof setting of time delay from 1-1000 sec.

Timing Ranges — 1 to 1,000 sec.

Timing Adjustment — Time delay is set by connecting an appropriately rated resistor or potentiometer between the center two terminals. As supplied, the unit provides a nominal 1 second delay. Add 10k ohm of resistance for every additional second of delay required. For example: 5 seconds = 40k ohms; 10 seconds = 90k ohms.

Accuracy —
Repeat Accuracy — ±2%

Reset Time — 100 ms, max., in the timing or time-out condition.

Output Switch Data

Arrangement — 1 Form A (SPST-NO)

Rating — 5A, inductive, at nominal operating voltage.

Inrush — Not to exceed 10A for one cycle.

Max. Leakage Current — 4mA rms

Expected Electrical Life — 10,000,000 operations at rated load.

Initial Dielectric Strength — Between Active Terminals and Outside of Case — 1,480VAC for one min.

Input Data @ 25°C

Operating Voltage — Universal — 24-240VAC/VDC (19-288VAC/VDC).

Current — 2mA (max.) required to operate timer regardless of output state.

Power Requirement — 3W max.

Transient Protection — MOV across input 2,000V for 11µs on line side of load.

Environmental Data

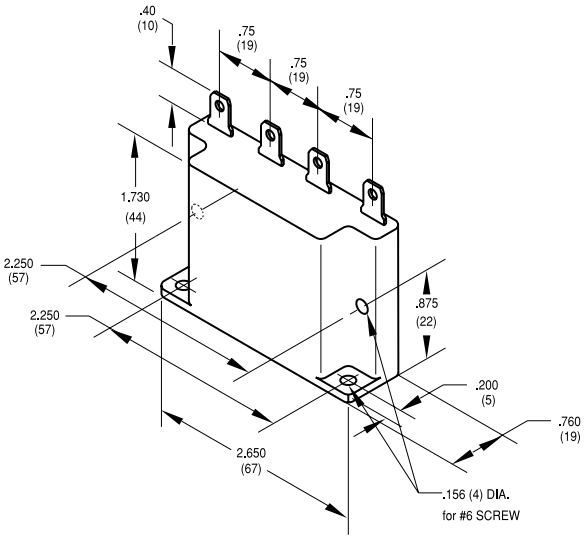

Temperature Range —
Storage — -40°C to +85°C
Operating — -30°C to +65°C

Mechanical Data

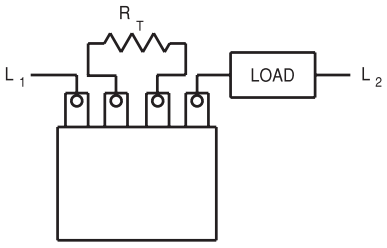

Mounting — Screw mount in horizontal or vertical position through built-in mounting ears.

Termination — 0.250 in (6.35) quick connect terminals for input line, load output and timing resistor connection.

Weight — 3 oz. (84g) approximately

Between Input and Output — 1,500VAC rms.

Input Data @ 25°C

Voltage (±10%) — 12 VAC/VDC, 24VAC/VDC, 120 VAC/VDC.

Power Requirement — 4W with rated load

Transient Protection — Non-repetitive transients of the following magnitudes will not cause spurious operation of affect function and accuracy.

Operating Voltage	<0.1 ms	<1 ms
12, 24 VAC/VDC	860V*	208V*
120 VAC/VDC	2,580V	2,150V*

* Min. source impedance of 100 ohm.

Environmental Data

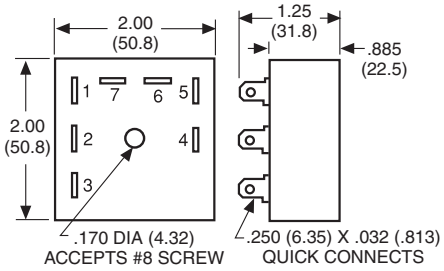

Temperature Range —
Storage — -40°C to +85°C
Operating — -40°C to +65°C

Mechanical Data

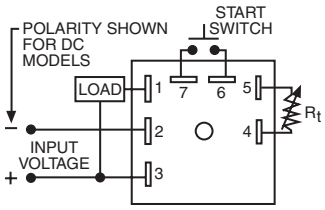

Mounting — Panel mount with one #8 screw.

Termination — 0.250 in (6.35) quick connect terminals.

Weight — 4 oz. (112g) approximately

Outline Dimensions

Wiring Diagram

An external resistance of 1 megohm is required to obtain the maximum time for all ranges. To determine the actual resistance needed to obtain the required time delay, use the following formula:

$$R_T = \frac{(T_{REQ} - T_{MIN})}{T_{MAX} - T_{MIN}} \times 1{,}000{,}000 \text{ ohms}$$

Ordering Information

VTM2	A	CD
Series VTM2	**Input Voltage**	**Time Range**
Off-Delay	A = 120VAC/VDC	CD = 0.5 - 10 sec.
Timing Module	E = 24VAC/VDC	DD = 3 - 60 sec.
	Q = 12VAC/VDC	GD = 3 - 60 min.

Users should thoroughly review the technical data before selecting a product part number. It is recommended that user also seek out the pertinent approvals files of the agencies/laboratories and review them to ensure the product meets the requirements for a given application.

VTM3 Series, Interval, Timing Module

Product Facts

- **Interval timing mode**
- **Reliable solid state timing circuitry**
- **Excellent transient protection**
- **Compact design**
- **Flame retardant, solvent resistant housing**
- **File E60363, File LR33434**

Timing Specifications

Timing Mode — Interval

Timing Ranges — 0.5 to 10 / 3 to 60 sec.; 3 to 60 min.

Timing Adjustment — External resistor or potentiometer. An external resistance of 1 megohm is required to obtain the maximum time for all ranges. To determine the actual resistance needed to obtain the required time delay, use the following formula:

$$R_T = \frac{(T_{REQ} - T_{MIN})}{T_{MAX} - T_{MIN}} \times 1{,}000{,}000 \text{ ohms}$$

Accuracy —
Repeat Accuracy — ±1%
Overall Accuracy — ±2% at R = 1 megohm

Reset Time — 50 ms, max.

Output Switch Data

Arrangement — Solid state 1 Form A (SPST-NO)

Rating — 1A, inductive, at nominal operating voltage.

Expected Electrical Life — 10,000,000 operations at rated load.

Initial Dielectric Strength — Between Terminals and Mounting — 3,000VAC rms.
Between Input and Output — 1,500VAC rms.

Input Data @ 25°C

Voltage (±10%) — 12 VAC/VDC, 24VAC/VDC, 120 VAC/VDC.

Power Requirement — 4W with rated load

Transient Protection — Non-repetitive transients of the following magnitudes will not cause spurious operation of affect function and accuracy.

Operating Voltage	<0.1 ms	<1 ms
12, 24 VAC/VDC	860V*	208V*
120 VAC/VDC	2,580V	2,150V*

* Min. source impedance of 100 ohms.

Current Drain — Less than 5mA.

CII Custom High Performance Solenoids

Product Facts

- Designed and built to customer requirements
- Push, pull or combination motion
- Broad operating temperature range
- Multiple termination and mounting options
- 200°C magnet wire insulation is standard

Description

Custom-designed linear solenoids for demanding applications

Top-end devices are engineered for applications where extreme temperatures and other severe environmental conditions may exist

High altitude, shock, acceleration and vibration reliable

Product Options

Linear motion, tubular solenoid line ranges from models only one-half inch (12.7 mm) in diameter producing only a few ounces (<1N) of force at very short strokes, to three-inch (76.2 mm) diameter models capable of 100 pounds (445N) force at one-inch (25.4 mm) strokes

Push, pull or combination motion available

Continuous or intermittent duty coils available

AC voltages can be handled through the use of internal rectifiers

Dual coil models with low holding power requirement may be appropriate in power sensitive equipment

Solenoids with plunger seals can be built for harsh environments

Solenoids can be made water-resistant, fuel-resistant and with encapsulated coils (ferrous parts are plated for protection against corrosion)

Leads are normally provided with fluoropolymer insulation, PTFE or ETFE; however, any type wire may be used as specified by the customer. MIL type connectors may also be used when specified. Can be provided with flat or conical face depending on stroke

Solenoid plungers can be internally or externally threaded or have clevis attachment

Prototype solenoids can be custom built to a customer's requirements

Electrical Characteristics

Voltage Rating —
6 to 270 VDC
28 to 115 VAC (60 or 400 Hz)

Mechanical Characteristics

Ambient Temperature Range — -65˚C to +125˚C

Force — 1 oz. to 100 lbs. push, pull, hold

Rated at 100,000 operations

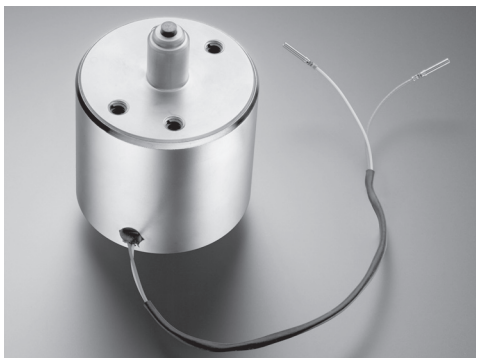

Built IAW MIL-S-4040 as applicable

CII Custom High Performance Solenoids (Continued)

Typical Applications

Fin Locking Solenoid

Three of these husky Solenoids are used to lock steering fins in place until the guided weapon is released.

Voltage — 22-28 VDC
Max. Allowable Current — Not specified
Actuating Force — 12 to 15.4 lb. (depends on input V)
Stroke — .095"
Time On — Bomb drop time
Time Off — Continuous
Cycling Rate — Not applicable
Type Operation — Pull
Temperature Range — Ambient -65˚F to +125˚F
Coil Connections — Fluoropolymer Insulation 8" to 8 3/4"
Approximate Dimensions — 2.20" diameter x 2.05" long
Type Mounting — Integral tapped holes
Special Environmental Consideration — Exposure to sand, dust, aircraft oils and fuels, will require an "O" ring seal on plunger.

Primer Firing Solenoid

This extremely powerful Solenoid together with its companion pulse control module is designed to fire a standard Military #41 arsenal primer, as part of an advanced mine detection system.

Voltage — 26 VDC
Max. Allowable Current — 10.4 Amps @ 26 VDC
Actuating Force — 90 oz. force inches (.64 joules)
Stroke — .38"
Time On — W/pulse control module, 25 ms
Time Off — 3 seconds
Cycling Rate — 20 operations/minute
Type Operation — Push
Temperature Range — Ambient -65˚F to +85˚F
Coil Connections — Fluoropolymer Insulation #20 stranded 6' long
Approximate Dimensions — 3/4" diameter x 3 1/2" long
Type Mounting — Integral 1/2" - 20 threaded base
Special Environmental Consideration — Sand and dust

Aero Medical Valve Solenoid

A scant 3/8" in diameter, this tiny precision Solenoid is capable of 100,000 reliable operations, controlling various airborne gas systems.

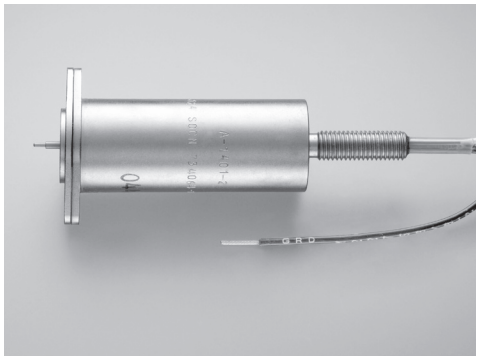

Voltage — 28 VDC
Max. Allowable Current — .18 Amps @ 28 VDC
Actuating Force — 190 grams @ .030 Amps
Stroke — .030" minimum
Time On — Continuous duty
Time Off — Not specified
Cycling Rate — Not applicable
Type Operation — Pull
Temperature Range — Ambient -65˚F to +125˚F
Coil Connections — #32 AWG Fluoropolymer Insulation, 24" minimum
Approximate Dimensions — 3/8" diameter x 3/4" long
Type Mounting — None

CII Custom High Performance Solenoids (Continued)

Typical Applications (Continued)

Fuel Valve Solenoid

This is a unique application in which the Solenoid is mounted inside an aircraft fuel tank submerged in JP-8 jet fuel. The coil is potted, completely fuel proof.

Voltage — 115 VAC 400 Hz
Actuating Force — 1 lb. minimum @ 160˚F
Stroke — .030"
Time On — Continuous duty rating
Time Off — Not specified
Type Operation — Push
Temperature Range — Ambient -65˚F to +160˚F
Coil Connections — IAW customer drawing, Fluoropolymer Insulation Leads
Approximate Dimensions — Tubular, 3/4" diameter x 3" long
Type Mounting — Flange IAW customer drawing
Special Environmental Consideration — Coil must be air tight, plunger operates while submerged in JP-8 jet fuel

Directional Valve Solenoid

A major valve company selected this rugged type Solenoid to control a directional hydraulic valve in heavy industrial machinery. The valve assembly has a 20 year expected life.

Voltage — 92 VDC
Max. Allowable Current — 7.2 Amps inrush, .08 Amps hold
Actuating Force — 30 lbs. minimum
Holding Force — 40 lbs. minimum
Stroke — .500"
Time On — Continuous duty
Time Off — Not applicable
Cycling Rate — Not applicable
Type Operation — Push and hold
Temperature Range — Ambient -55˚F to +85˚F
Coil Connections — Fluoropolymer Insulation #18 AWG, 72" L
Approximate Dimensions — 2 3/16" dia. x 4 3/16"
Type Mounting — Plate
Special Environmental Consideration — Sand, dust, rain

Refueling Release Solenoid

This complex Solenoid with internal current limiting switch is part of an "Air to Air" refueling system.

Voltage — 18 to 30 VDC
Max. Allowable Current — 10 Amps/50 ms - 1 Amp continuous holding
Actuating Force — 20 lbs. min. for .10" of initial stroke
Holding Force — Plunger must hold at bottom
Stroke — .17 to .20"
Time On — Continuous duty
Time Off — Not applicable
Cycling Rate — Not applicable
Type Operation — Pull
Temperature Range — Ambient -65˚F to +160˚F
Coil Connections — Connector MS 30ZE-10SL-4P per MIL-C-5015
Approximate Dimensions — 2 1/4" dia. x 2 13/16"
Type Mounting — Integral with refueling receptacle
Special Environmental Consideration — High performance aircraft exposure

Power Distribution Units 14-2

Power Distribution Units

Custom-designed and built AC or DC products for aerospace applications

Key platforms for which we have designed and built PDUs:

- For primary and secondary power distribution
- Various plug-in and bus bar line-replaceable modules (LRMs)
- Installed on a panel mounting system or backplane
- LRMs may be contactors, circuit breakers, sensing units, ELCUs
- Backplanes, designed as a fault-free zone with no moving parts, are intended as a permanent installation on the mother vehicle
- Current/voltage sensing, fuses, circuit breakers, power monitors
- Integrated generator and logic control units
- Compact designs

HARTMAN AC and DC power distribution units (PDUs) and KILOVAC DC PDUs from TE Connectivity are designed, built and qualified to meet your specific requirements.

We have a half-century of experience providing PDUs for the aerospace industry, serving both commercial and military customers.

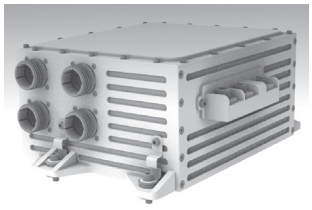

Allow us to apply our significant expertise in integrating bus-bar and plug-in contactors, relays, sensors, monitors, circuit breakers, shunts, generator control units and other components into compact, lightweight PDUs.

Through our value-added service we can save you time and money in your design and manufacturing processes, as well as the end customers' maintenance programs.

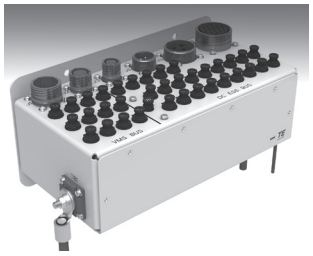

Whether you require innovative modular units or backplane-type panels for fixed wing aircraft or rotorcraft, we can help.

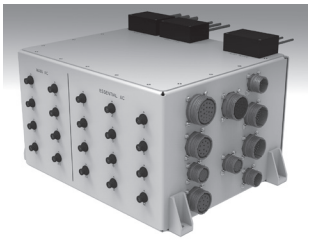

28 VDC primary distribution PDU incorporating HARTMAN K500 bus bar-mount contactors and HECS Hall effect sensors

270 VDC EDU incorporating KILOVAC MAP series primary and secondary distribution contactors in a compact LRU enclosure

28 VDC secondary distribution PDU using HARTMAN K series contactors, CII FCA Series relays and DEUTSCH connectors

Primary and secondary 115 VAC, 400 Hz PDU using HARTMAN compact 200 A, 3-phase contactors and CII midrange relays

Custom Primary Power Distribution

AC PDUs — from power distribution panels to line replaceable units—using HARTMAN AC contactors with ratings to 500 amps per phase at 115/200 VAC, 400 Hz

28 VDC PDUs — Distribution panels HARTMAN DC bus bar contactors rated to 1000 amps or hermetic contactors rated to 600 amps at 28 VDC

270 VDC PDUs — using KILOVAC military/aerospace high-voltage DC contactors rated to 1000 amps continuous current and up to 1000 VDC

Secondary Power Distribution

HARTMAN and CII relays and contactors combine for a full range of capability in secondary AC or 28VDC power distribution.

KILOVAC ultra-small high-voltage DC contactors, rated to 150 amps continuous current, allow smaller PDU packages with true flight-rated HVDC hardware.

Advanced Products for State-of-the-Art Designs

Monitoring and Autonomous Trip — HARTMAN AC Remote Power Controllers (RPCs), Remote Control Circuit Breakers (RCCBs) or Electronic Load Control Units (ELCUs) provide power monitoring and autonomous trip capabilities.

Ground Fault Sense and Trip Relays and Contactors — can be added for further protection.

Hall Effect Current Sensors — can be integrated into our HARTMAN K series bus bar 28 VDC contactors or used as standalone sensors.

High-Voltage DC Current Sensing — KILOVAC KCS series contactors have embedded hall effect sensors for use as overcurrent sense contactors or as remote power controllers with customer-determined time delay on trip.

Fast Switching — TE's new KDPC series SSPC, rated at 100 A at 270 VDC, delivers fast switching speed, power protection and long life.

Complete Packaging — TE's broad product portfolio enhances our PDU design capability with products from our Raychem wire, cable, tubing, and molded shapes, AMP terminals and connectors, and DEUTSCH 38999 connectors.

Materials Expertise — Our capabilities for providing sturdy, lightweight enclosures include both aluminum and TE composites.

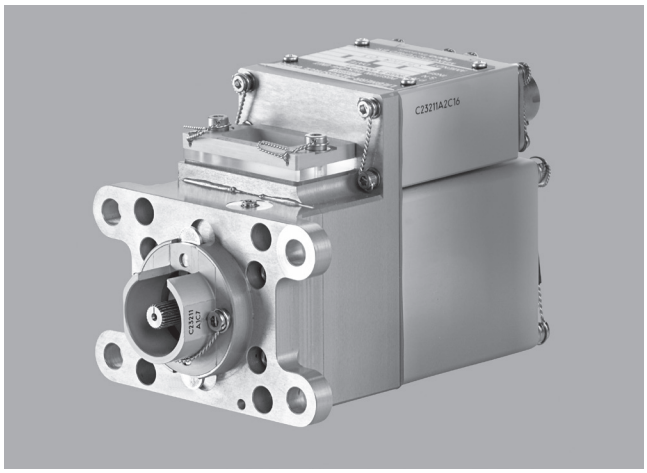

Table of Contents

Sensors 15-2

High reliable sensors solutions for harsh environmental conditions

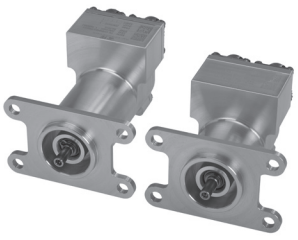

Applications

- Lightweight, compact single- and multiturn position sensors for Flight Controls
- Resolver for steering position, e-drives, rotary actuation and cockpit controls
- Proximity sensors for cabin & cargo doors, seat positioning
- Force sensor
- Sensor types
- Flap, Slat position sensors
- Door proximity sensor
- Steering feedback sensor
- Holow Shaft Resolver

Next to a lot of other sensors techmologies and applications TE offers a growing range of sensors for the Aerospace, Defense and Marine industry. Our core competence in high reliability sensors for harsh environments such as temperature extremes, RFI, EMI, vibration and lightning strikes make us a leadng choice in sensor technology. We work closely with our customers to provide stable, reliable and cost effective solutions that meet the extensive development cycles and qualifications critical to aerospace, defense and marine.

Introduction

This index covers all High Performance Group military qualified (QPL) products under the following specifications:

- **CII Hybrid Relays**
  MIL-PRF-28776: Relays, Hybrid, Established Reliability, Low level to 1 Amp

- **CII Electromechanical Relays**
  MIL-PRF-39016: Relays, Electromagnetic, Established Reliability, Low level to 5 Amps
  MIL-R-5757: Relays, Electromagnetic, Low level to 10 Amps
  MS27245: Relays, Electromagnetic, 10 Amps
  MS27247: Relays, Electromagnetic, 10 Amps
  MIL-PRF-83536: Relays, Electromagnetic, Established Reliability, Low level to 25 Amps

- ***HARTMAN* Contactors**
  MS27750: Relays, Electromagnetic, 50 Amps

- **KILOVAC Vacuum Relays**
  MIL-DLT-83725: Relays, Vacuum, High or Low Voltage Circuits

- **KILOVAC Time Delay Relays**
  MIL-PRF-83726: Relays, Hybrid and Solid State, Time Delay
  (NOTE: QPL STATUS PENDING AT TIME OF CATALOG PRINTING)

- **KILOVAC Solid State Relays**
  MIL-PRF-28750: Relay, Solid State, Hermetically Sealed or Encapsulated
  DSCC 85092: Relay, Solid State, Optically Isolated, Analog Signal Switching
  DSCC 86031: Relay, Solid State, Optically Isolated, 10 Amps
  DSCC 88062: Relay, Solid State, Optically Isolated, 2.1 Amps
  DSCC 89116: Relay, Solid State, Optically Isolated, 0.25 to 1 Amp
  DSCC 90091: Relay, Solid State, Optically Isolated, 1 or 2 Amps

Military Part Number Example

M	39016/10	-001	L
Military Designator	Specification Sheet Number	Dash Number	Failure Rate Level (see below)

Failure Rate Designation

Failure Rate Level Designation	Failure Rate Level (Percent per 10,000 cycles)
L	3.0
M	1.0
P	0.1

Non-Power Switching Applications (Isolation Only)

If your application requires only that the relay carry current, provide voltage isolation, and the power is always removed prior to actuating the relay contacts, then you have a relatively simple task selecting the proper relay based on its voltage isolation and current carry capability.

If there is any possibility that the relay could at some time switch a load, for example in a fault condition, then a load switching relay should be selected. Please review next page to determine which TE relays meet your voltage and current carry needs and then proceed directly to the indicated product page.

Technical Considerations

When the relay will not be required to power switch, the primary issues to consider are the maximum system voltage and the maximum current the relay must carry. Normally these can be easily determined and, by reviewing the product specifications, the appropriate relay can be selected.

Momentary or Pulsed Loads Through Closed Contacts

KILOVAC vacuum and gas-filled relays can handle momentary current pulses much higher than their continuous current rating. The key is to keep the temperature rise of the relay within safe limits since the normal failure mode in high peak current applications will be either contact welding from very high, very short current pulses or loss of seal integrity of the glass-to-metal, ceramic-to-metal or epoxy-to-metal seals due to excessive heat.

Figure 1. Recommended Relays For High Voltage Isolation (Non-power Switching) Applications

Part Number	Isolation Voltage	Continuous Current	Contact Form	Load Switch*	Peak Current	See Page

***Pulse, 1s Duration, Closed Contacts

Non-Power Switching Applications (Isolation Only) (Continued)

Therefore, there are two key parameters you must consider in selecting a relay for this type of application. First, refer to Figure 1 for recommended relays and their estimated peak current pulse rating. Second, you must calculate the duty cycle of the pulse to ensure that you will not exceed, on average, the relay's continuous current rating. To calculate duty cycle,

Pulse duration (in seconds) X pulse rep rate (in cycles per second) x 100 = duty cycle (in percent)

The duty cycle times pulse peak current should not exceed the continuous current rating of the relay.

For example: A pulse of 50 amps, lasting 50 milliseconds is passed through the relay every 200 milliseconds. The duty cycle is ...

.050 pulse duration X 1 cycle/.200 seconds = 25% duty cycle

The average current is ...

25% X 50 amp peak current = 12.5 amps continuous

Thus, a relay with a 12.5 amp or greater continuous current rating will be suitable for this application.

Radio Frequency (RF) Applications

Because of their good insulation qualities and low contact resistance, vacuum relays are quite commonly used in RF applications such as transmitters, antenna couplers, semiconductor processing equipment, and power supplies. However, operating any relay at RF imposes current and voltage limitations. The "skin effect" of RF current on the surface of the conductor creates the current limitation. As frequency is increased, the effective cross-section of the conductor path is decreased, resulting in heating of the conductor surface. This heating limits the maximum current the conductor can carry due to the inherent temperature limitations of the ceramic-to-metal or glass-to-metal seals.

When the relay is used as an insulator, there is RF voltage across the open contacts, or between contacts and ground. For all practical purposes, this insulator has a high voltage capacitance of from 1 to 2 picofarads. The leakage current flowing through this insulator/capacitor results in the heating of the lossy elements of the insulator which, again due to the temperature limitations of the seals, limits the maximum RF voltage that can be handled. In addition, contact gaps simply break down at lower voltages with RF than DC.

These effects make it necessary to derate the current and voltage specifications for operating at RF. Ceramic relays can handle higher RF power than glass relays due to their reduced susceptibility to failure from localized heating; however, both types are commonly used. Many of the KILOVAC relays recommended for RF applications have pure copper contacts for better heat conduction and increased ratings. Because of this, relays in RF applications should normally not be switched under load as a catastrophic failure caused by melting of the relay contacts may occur. If you have an application which requires high frequency power switching, call TE at the numbers listed below.

TE Connectivity offers a wide variety of high voltage relays for RF applications to 32 MHz.

Non-Power Switching Applications (Isolation Only) (Continued)

Figure 2 shows the typical RF deratings that can be expected when specifying vacuum relays. Specific relay deratings are shown on the product pages. Figure 3 displays the relays recommended for RF applications.

Typical RF Derating For High Voltage Vacuum Relays

Power Switching Applications

High voltage power switching applications are those which require the relay to make and/or break the load. In most applications, it is important to know the highest potential fault current which could be encountered and how many times the relay or contactor will be required to clear the fault since this will determine the relay or contactor which should be selected.

Load switching in AC circuits is sometimes easier on the relay due to the natural arc extinction which occurs as the current passes through zero. Because of this, relay ratings are usually much higher when switching AC circuit loads.

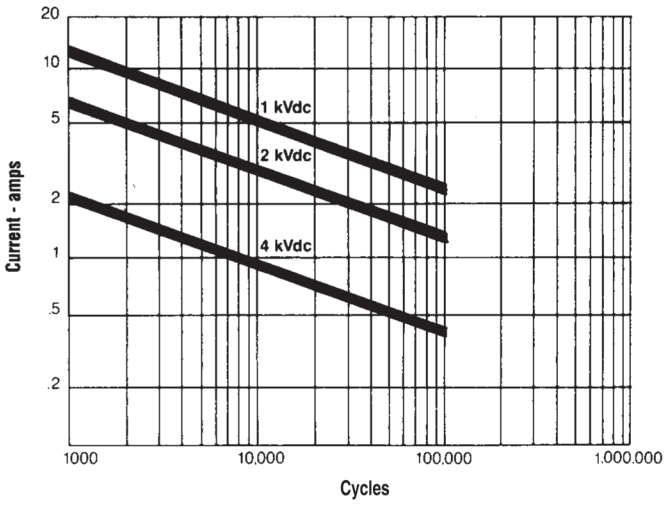

TE vacuum relays and contactors have been selected for a variety of high reliability space and undersea fiber applications.

Switching of direct current loads creates special problems for relays. Many traditional relays and contactors have difficulty interrupting loads above 48 Vdc. TE has a broad product line of relays, contactors, and power controllers which have been specially designed to handle the problems of DC switching. When load switching must be done at voltages above 1000 volts, refer to the power switching curve on the product data pages or the below graphs for relay families. For specific recommendations, call TE at the numbers listed below.

Higher current affects relay ratings more than higher voltage. There are no hard and fast rules which can be used to develop a relay's electrical life rating given voltage and current switching specifications. Once again, experience and thorough testing in the actual circuit are the best ways to establish relay life and reliability. Figure 4 illustrates the operating characteristic determined experimentally for one family of power switching products.

Note: Life expectancy for SPDT relays is lower due to greater contact bounce

Power Switching Applications (Continued)

Capacitive Discharge or "Make-Only" Power Switching

One of the most common applications for high voltage relays is the charge and discharge of a high voltage capacitor. Since this normally involves "make-only" power switching, KILOVAC SF-6 gas-filled relays generally offer superior performance to vacuum relays. In order to select the proper relay, you must determine the peak current and RC time constant in addition to the normal parameters of voltage, contact configuration, etc. The RC time constant is the time it takes for the capacitor to discharge 63% of its stored electrical charge. Virtually all electrical charge will be discharged in 5 RC time constants. The RC time constant is simply the product of the circuit resistance and capacitance. For example, a circuit discharging an 8 microFarad capacitor through 100 ohms of series resistance will have an RC time constant of 800 microseconds.

(R x C)= 100 X .000008 = .0008 or 800 microseconds

It is often difficult to specify the proper relay for capacitive discharge applications because of the many potential variables. It is especially important in these applications to conduct tests to determine which relays are suitable and their reliability.

Figure 5 below is based on "rules of thumb" and actual circuit data. If your application differs significantly from those shown in the figure, contact your local Tyco Electronic sales engineer.

Figure 5. Recommended Relays for Capacitive Discharge Applications at Rated Voltage

Part Number	Rated Voltage	Contact Form	Peak Current 500 ns RC Time	Peak Current 500 µs RC Time	Peak Current 1 ms RC Time	See Page
HC-5	3.5 kV	C	50 A	25 A	5 A	7-58
KM-17	5.5 kV	2C	150 A	75 A	35 A	7-62
HC-6	8.0 kV	C	50 A	25 A	5 A	7-64
KC-15, 16	15.0 kV	C	200 A	100 A	10 A	7-75
KC-28, 38	25.0 kV	X,Y	1500 A	1000 A	400 A	7-80
K61 Series	35.0 kV	A,B,C	500 A	250 A	125 A	7-82
K64C	50.0 kV	C	400 A	200 A	100 A	7-85
K70 Series	70.0 kV	A,B,C	350 A	175 A	90 A	7-86

Note: Relay life can be expected to be in excess of 100,000 cycles at these load levels. This chart is intended to serve as a general guide only. We recommend you test the relay in your circuit to confirm its suitability.

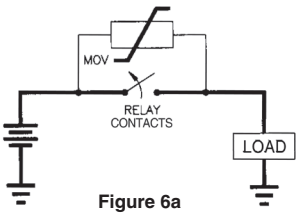

Figure 6a

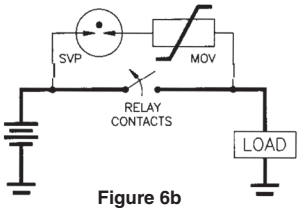

Figure 6b

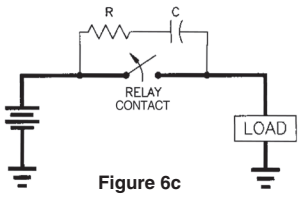

Figure 6c

Failure Modes in Capacitive Discharge Switching

There are two possible failure modes in capacitive discharge switching: contact welding and shortened load life. Both are due to excessive contact heating from high peak currents and/or long RC times. Therefore, we often recommend that customers either reduce the capacitance or increase the resistance of their circuit to improve relay performance.

Direct Current Power Switching

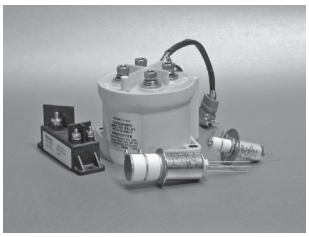

Vacuum and hydrogen gas filled relays and contactors are being selected more and more often for use in direct current electrical systems. Switching a direct current load is one of the toughest tasks a relay can be asked to perform. Many times the relay or contactor will also be called upon to clear the maximum fault current, often several times higher than the normal load. Unlike AC power, where both voltage and current regularly pass through zero allowing the arc formed during switching to naturally extinguish, a DC load can only be interrupted by forcing the arc voltage higher than the source voltage. A number of schemes are commonly used to increase the arc voltage, ranging from arc chutes or multiple contacts to magnetic blowout, which lengthens the arc path.

The TE power switching relays are designed to interrupt rated power as supplied. However, reactive inductive loads can result in significant voltage overshoot in some applications. Voltage overshoot can be suppressed by a variety of measures.

Figure 6a, b, and c show three methods used to limit the voltage transient developed across the relay contacts when interrupting inductive loads. The same circuits impressed across the load will protect it from voltage overshoot:

- Figure 6a shows a Metal Oxide Varistor (MOV) across the power contacts. We recommends this circuit for most general purpose applications and suggests the user consult MOV manufacturers application notes since the proper MOV selection depends on transient energy, etc. MOV's are compact in size and low in cost.

Power Switching Applications (Continued)

TE offers a wide variety of relays and contactors for power switching applications.

- Figure 6b indicates an MOV in series with an SVP (Surge Voltage Protector — spark gap). The MOV absorbs transient overshoot energy, the SOV provides excellent dielectric once the circuit is open. This solution is also compact in size and low cost.
- Figure 6c illustrates the traditional RC Snubber. The snubber will suffice for low power and energy situations, but suffers a size and cost penalty at high power.

KILOVAC vacuum, hydrogen and nitrogen gas-filled "super sealed" relays have some significant inherent advantages in switching high current DC loads. These include:

- Longer load life due to ability to use high temperature contact materials
- Low contact resistance due to the elimination of contact oxidation/contamination
- Lighter weight and smaller size due to smaller contacts and shorter contact gaps
- Low coil power due to optimized magnetic circuits and small size
- High integrity, durable ceramic to metal hermetic seals

Today, the TE products have been rated at 320 Vdc since this is the most common voltage being adopted by many new applications. However, the new products are versatile, encompassing a wide range of power, voltage, and current applications.

For detailed application notes on EV relays, contact TE to request a copy of the TE EVS-13 paper entitled, "Use of High Current Relays in Electric and Hybrid Electric Vehicles".

Double Throw Power Switching

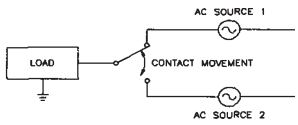

Figure 7a. Un-synchronized AC Loads — Generally not recommended

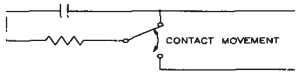

Figure 7b. Improper placement of resistor for power switching

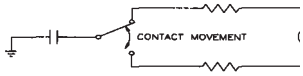

Figure 7c. Proper placement of resistor for power switching

Double throw relays like the TE PD5C are used in a variety of "hot" or "power" switching applications, and they generally work fine. However, many application problems can be avoided by verifying that the relay was tested with the polarity and load conditions exactly like the application. In the aerospace industry, it is generally well known that switching un-synchronized AC loads is not recommended (see Figure 7a).

We found another application that took our experts some time to troubleshoot. This application required the charging and discharging of a capacitor. The double throw relay was used to switch a capacitor, which was in series with a resistor, between the plus and minus of the power source (see Figure 7b.).

But when the relay was used to discharge the capacitor, an arc occurred as the plus side of the load was interrupted, and an arc with full power system potential followed the moving contact to the minus side of the power source, thereby causing a short. To remedy the problem, the resistor was removed from the moving contact, and resistors were installed on both the plus and minus sides of the power source (see Figure 7c).

This reduced the current, and therefore eliminated the arc fault during contact transfer. TE tests all of our hot switching relays with the positive polarity on the common contact, unless otherwise requested. The application above, and others that may involve switching between two power sources, require special testing to confirm a workable circuit design.

270 Vdc Aerospace Relays, and Contactors

With the need for more power, less weight and the desire to eliminate unreliable hydraulic systems, next generation military aircraft, ground, and sea vehicles have moved to 270 Vdc as the primary power. One of the reasons it has taken so long for 270Vdc to be used in these systems is that there were no relays or circuit breakers that could handle this new higher dc voltage. We have solved this problem.

Since 1987, TE has invested substantial time and effort in developing products that can switch direct current 270Vdc loads. Today TE has the largest selection of aerospace products available for these applications with load ratings from milliamps to 350A, continuous current carry to 800A, and overload rating to 3000A. These relays and contactors an be used at voltages ranging from 28 to 400Vdc. These ratings have been extrapolated and plotted onto graphs which are shown on the individual product data sheets.

In addition, we have the resources necessary to work directly with you in developing a new product or modifying an existing product to meet your specific application's requirements. TE recommends that you contact your local sales engineer for specific rating information-for higher voltage applications.

Power Switching Applications (Continued)

270 Vdc Aerospace Relay and Contactor Reliability

In order to allow customers to select the desired failure rate for TE's power switching devices, and determine the appropriate life rating and vice-versa, TE has created a series of curves showing the failure rate vs rated life. These curves have been generated using the results from Weibull analysis. The use of the Weibull distribution to predict product reliability from life test data has been shown to be an accurate and effective method when applied to TE' electromechanical devices. As an example, the following graph shows the hot switch life estimate for EV200 contactors:

Failure Rate vs. Rated Resistive Load Life at 90 A, 270 Vdc

*Failure rate letter designations per MIL-STD-690

Contact TE for more information on the following:

- Reliability data for other 270 Vdc KILOVAC contactors and relays.
- Methodology using Weibull analysis; ask for TE Engineering Report No.415, "Determination of Failure Rate Curve from Weibull Data".
- Correlation between Weibull analysis and traditional reliability methods; ask for TE Paper "Correlation Between Weibull Analysis and Traditional Reliability Methods".

270 Vdc Aerospace Remote Power Controllers (RPCs)

The TE high voltage DC power contactors can be coupled with our custom designed CED1034 electronic control circuit to provide the remote power controller function. The controller performs the circuit protection function by monitoring the load current via a low resistance, precision temperature compensated resistor. An overload has priority over all control functions. The trip characteristic graphically illustrates the typical trip envelope with trip time as a function of overload current. The trip envelope can be tailored to meet specific customer requirements.

Test Equipment for HARTMAN Relays and Contactors

VIBRATION TEST EQUIPMENT

Vibration Control:
Spectral Dynamics PUMA Vibration Control System; Auto/Manual operation; Sine, 1 – 5000Hz; Random, 50 – 20,000Hz; Shock Pulse: half-sine, sawtooth, trapezoidal, rectangular; Accuracy: ± 1 dB (with 120 Dof), calibration frequency: 6 months.

Power Amplifier:
Unholtz-Dickie, model: TA-115, range: 16 KVA output power, calibration frequency: 6 months.

Shaker:
Unholtz-Dickie, model: TC-205, 4,000 lbs. pk. force sine 3,300 lbs. force RDM 1 inch pk. stroke, frequency range 5-3,000 Hz.

Slip Table:
Mitron.

Charge Amplifier:
Unholtz-Dickie, model: D22PMJO, range: 1/10/100 mv/pk.g., 0-10 kHz., 0 to 1,000 g, accuracy: ± 2%, calibration frequency: 6 months, P/N- SN5103

CHAMBERS

Temperature Chamber:
Thermotron, model S-1.2, range –73°C to +175°C (3 units)

Temperature/Altitude Chamber:
Envirotronics, Model EA27-2-5-WC, temperature range: -68ºC to +177ºC ± 1.1ºC, altitude range 0 – 100,000 feet.

Temperature Chamber:
Envirotronics, Model EVS 37-2-30, range -73°C to +177°C accuracy ± 1.0°C, calibration frequency 6 months; capable of 30ºC/minute maximum change rate.

Humidity/Temperature Chamber
Thermotron Model SM 5.5C range –68°C to 177°C ±1.1°C, relative humidity 20% to 95%, ±2.5%RH

GENERATORS

AC Generator:
Ideal, 300 KVA, 3 phase, 4 wire, 400 Hz., 208/120 volts. 415/240 – 450/260 volts

AC Generator:
Kato Engineering, 30 KVA, 3 phase, 4 wire, 400 Hz., 208/120 volts.

Other Capabilities:
Voltage, Current and Power Sensing
Over and Reverse Current
Over and Under Voltage
Over and Under Frequency
Ground Fault and Detection
Phase Sequence, Unbalance and Failure
Positive, Negative and Zero Sequence Voltage
Impedance Relays
Ripple Detection
Signal Amplification
Time Delay
Turbine Starting
Trip-Free, Electrical and Mechanical Interlocking
Electrical and Magnetic Latching
Polarization
Power Switching

Typical KILOVAC Relay Applications

Predicting Reliability by Weibull Plotting

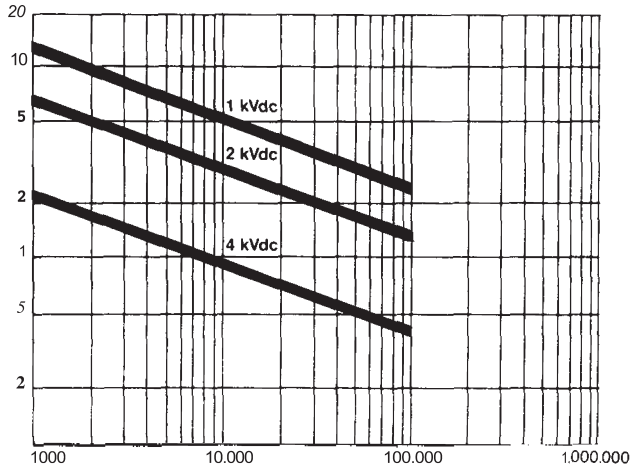

TE uses Weibull plotting to predict product reliability. Weibull plotting is a simple and efficient way to predict reliability from a small number of life tests and it is widely used for this purpose. At least five and preferably seven or more samples are tested to failure. The cumulative percent failure is plotted against life on Weibull paper. The scales of Weibull paper are designed so the failure data of a wide variety of manufactured devices will tend to lie in a straight line. As the chart above shows, this data can then be interpreted to estimate the likelihood of failure at a given life. If you would like more information on this valuable technique, contact TE and request “Weibull Plotting,” TE Engineering Report #219.

PC Board Mount Relays

TE’ K81 series of relays offer designers the flexibility of printed circuit board mounting. High voltage relay connections are directly on the board or to high voltage flying leads. With a new rating of 10 kV and capable of carrying 10 amps ,the K81 series can serve a wide range of high voltage applications. Failsafe, latching, and SPDT versions are available and we will be happy to provide special terminations on request.

Figure 9 shows the predicted life of K81 series relays making and breaking a resistive load. Since circuit conditions vary widely, this information should be considered a general guide only. Please contact your TE sales engineer with your design requirements.

Figure 9. Typical Hot Switching Resistive Load-in Characteristics K41A, K43A, K81A Relays

Note: Life expectancy for SPDT relays is lower due to contact bounce

Typical KILOVAC Relay Applications (Continued)

Test Equipment Applications

Test equipment applications, by their very nature, tend to impose difficult requirements on relays. The overall criterion is for reliable, repeatable, and consistent results. Without this, no piece of test equipment can be considered usable.

TE relays have some special characteristics which contribute to their wide application in test equipment.

1. The relay contacts are in a controlled environment. Dust, humidity, or infrequent use will not affect the relay's performance.
2. KILOVAC vacuum relays have extremely low and stable contact resistance since oxides cannot form on the contacts. Even when load switching, contact resistance will vary within a very narrow range.
3. Since they are designed for high voltage isolation, KILOVAC relays offer extremely high insulation resistance and very low current leakage. This is an advantage in many switching matrices where these values must be kept as low and repeatable as possible.

TE high voltage relays are used in many in-house test equipment applications as well as OEM applications. For example:

- Hipot Testing
- Test Sets
- Motor/Generator Test Sets
- Cable Testing
- Capacitor Testing
- Electrostatic Discharge (ESD) Testing
- Relay Test Equipment
- Power Supply Test Equipment

High Insulation Resistance Applications

Both vacuum and gas-filled relays are often used in applications, particularly test equipment, which require very high insulation resistance due to the sensitivity of the measurements being conducted. Standard KILOVAC relays often have sufficiently high insulation resistance for many applications and other KILOVAC relays can be modified to meet special insulation resistance requirements upon request. The chart below shows the typical insulation resistance of standard KILOVAC relays. If you have an application that requires a high insulation resistance relay, call TE at the numbers listed below and tell us of your requirement.

Figure 10. Recommended Relays for High Insulation Resistance Applications

Part Number	Rated Voltage	Contact Form	Contact to Case Insulation Resistance*		Contact to Contact Insulation Resistance*	
			@ 1000 Volts	@ Rated Voltage	@ 1000 Volts	@ Rated Voltage
HC-1 Series	3.5 kV	C	9.5×10^{13}	1.5×10^{12}	2.5×10^{13}	3.6×10^{13}
K41 Series	5.0 kV	A,B,C,P,R	2.4×10^{13}	3.2×10^{13}	7.0×10^{12}	7.5×10^{12}
K44 Series	8.0 kV	P	1.4×10^{14}	1.6×10^{13}	3.3×10^{13}	3.8×10^{13}
K43 Series	10.0 kV	A,B,C,P,R	2.4×10^{13}	4.4×10^{13}	9.0×10^{12}	1.5×10^{11}

* Typical values; measured In ohms

Note: Measurement of insulation resistance requires strict control of the test environment. Contact TE for more information.

Typical KILOVAC Relay Applications (Continued)

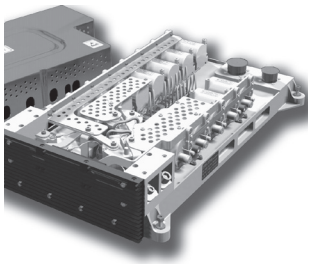

Relays with Special Modifications and Power Distribution Units

TE routinely develops KILOVAC relays with special modifications for customers. These modifications can include:

- contact arrangement
- operating voltage
- pickup or dropout voltage
- operate time
- mounting style or method
- coil voltage
- high voltage terminations
- coil terminations
- markings

Customized Lightweight Power Distribution Units

- For primary and secondary power distribution
- Modular systems consist of various plug-in and bus bar line-replaceable modules (LRMs) installed on a panel mounting system or backplane
- LRMs may be contactors, circuit breakers, sensing units, ELCUs, etc.
- Backplanes, designed as a fault-free zone with no moving parts, are intended as a permanent installation on the mother vehicle
- Optional current/voltage sensing, fuses, circuit breakers, power monitors, etc.
- Weight-saving and space-saving designs reduce OEM labor requirements and easy maintenance
- Optional integration of generator control units and logic control units

PDU featuring bus bar mount 270 Vdc DC contactors.

In addition, TE can take a standard relay or several relays and package them to your specifications. By packaging components and subassemblies with the relays, as demonstrated in Figure 16, the handling and installation of the product during manufacturing and field service can be greatly simplified. In this case, four high frequency inductive filters and special quick-connect cable assemblies of the correct length have been assembled with the relay. Then the whole assembly has been encapsulated for ease of handling and mounting.

Contact the TE sales engineer in your area to review your special requirements and establish a special part number which identifies your relay's unique characteristics.

Relay Application Notes

A number of modifications can be made to KILOVAC relays so they will operate faster than the catalog specifications, consume less power, and function reliably at elevated temperatures. In addition, high voltage relay users should be familiar with high voltage processing techniques, high voltage connectors available by special order, and when to be concerned about radiation exposure. The following chapter covers these topics, and more.

Improving Relay Operate Time

There are a number of methods which can be used to substantially improve relay operate time over the standard specification. Operate times of one millisecond or less can sometimes be achieved.

Our definition of operate time is "the interval between the application of the nominal coil voltage and closing of all normally open contacts (or opening of all normally closed contacts)." This includes:

1. Time for the coil to build up the magnetic field.
2. Transfer time of the moveable contact.
3. Bounce time after the initial make or break.

Operate time is basically a function of the coil power and inductance. More than half of the switching time is necessary simply to build up the coil field, thus; the basic scheme for reducing operate time is to apply more voltage to the coil. This can be accomplished by overdriving the coil with a higher than nominal voltage directly from your supply. To prevent overheating, the coil voltage should be reduced to the nominal value shortly after the relay operates or a resistor equal to or greater in value than the coil resistance should be placed in series with the coil to keep total power applied at the specified level (See Figure 11). Doubling the nominal voltage and adding an external resistor equal to the coil resistance can reduce the operate time up to roughly 40%.

Figure 11. Over Voltage Method of Reducing Operate Time

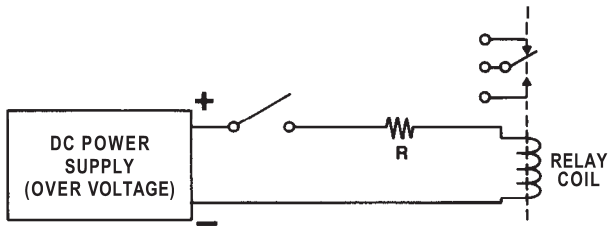

Figure 12. Recommended Relays for Fast Switching Applications

Part Number	Rated Voltage	Contact Form	Operate Time Specifications (Typical Time)*	Operate Time with "Hot Shot" Circuit*	See Page
HC-1, HC-3	3.5 kV	C	6 (2.5)	2.0	7-58
K41P	5.0 kV	P	6 (2.7)	2.3	7-60
K40P	5.0 kV	P	1 (0.75)	0.6	7-61
K44P	8.0 kV	P	5 (2.5)	2.2	7-66

Relay Application Notes (Continued)

Calculating Pull-in and Drop-out Voltages at High or Low Temperatures

Most of our specifications are for a 25°C ambient temperature. However, a well known phenomena of electrical circuits is the rise in resistance of a current path as temperature is increased. The temperature rise may be caused by current flow or by changes in ambient temperature, but the effect in either case is increased resistance. Therefore, you can expect coil resistance, pull-in, and drop-out values to change over the operating temperature range of the relay.

Figure 13. Change in Pull-In Voltage Over Temperature

The coil resistance (R_t) after a specific temperature rise (ΔT) is calculated using the formula:

$$R_t = R_{25°C} (1+.003853\ \Delta T)$$

where:

R_t = New resistance at elevated temperature

$R_{25°C}$ = Coil resistance at room temperature (25°C)

ΔT = Rise in temperature from 25°C

Pick-up voltage varies directly with the change in coil resistance caused by a change in temperature. The basis for this is Ohms Law:

$$E/I = R$$

Since a relay coil is a current-driven device, as the coil resistance varies with temperature, so must the pick-up voltage (I=V/R). Thus, the same formula we used above to calculate the change in resistance with a change in temperature can be used to calculate pick-up voltage by substituting pick-up voltage for resistance. For example, assume that you have selected a relay that has a maximum pick-up voltage of 16 Vdc at 25°C, a standard value for a relay with a 26.5 Vdc coil, and you want to operate it in a 85°C environment. Using the formula, we find:

$$V_t = 16\ Vdc\ (1+.003853\ X\ 60°C) = 19.7\ Vdc$$

If the ambient temperature is raised to 100°C, the new pick-up voltage will be:

$$V_t = 16\ Vdc\ (1+.003853\ X\ 75) = 20.6\ Vdc$$

If the power supply you are using is rated at 20 Vdc, the relay would operate in an 85°C environment but not in a 100°C environment.

This same formula works for a decrease in temperature. For instance, at -25°C the pick-up voltage will drop to 12.9 Vdc, as follows:

$$V_t = 16\ Vdc\ (1 + .003853\ X\ -50) = 12.9\ Vdc$$

If you want your circuit to operate properly over its entire temperature range, it is essential that you make the necessary calculations to ensure that the available voltage exceeds the temperature-adjusted relay specification.

Relay Application Notes (Continued)

Suppressing Relay Coil Transients

When a 28 Vdc relay coil is turned off, the inductive energy stored in it can create surge voltages to 1500 volts on a DC power line. With the increased use of solid state devices which are sensitive to spikes, relay coils must be suppressed to limit voltage spikes to a maximum of 50 to 80 volts.

The measure of successful coil suppression depends on the degree to which the method affects the operation of the relay. Improper or excessive suppression can cause the relay to suffer from a long release time, slow contact transfer, and contact bounce on break. All of these conditions will increase contact arcing when load switching, which will reduce relay life dramatically.

There are a number of common ways for a relay user to suppress relay coil transients and each has advantages and disadvantages. However, the most widely used methods utilize zener-diode and/or zener-zener combinations. These combinations are compact, provide excellent suppression, and do not affect relay release-time or contact life. Figure 14 illustrates some of the more common configurations.

Figure 14. Comparison of Relay Coil Transient-Suppression Methods

	Suppression Device	Increase Over Standard Cost	Space Problem	Polarization Requirement	Possible Temperature Problems	Line-Surge Sensitive	Effect on Release Transfer Time & Bounce Before Complete Break	Effect on Relay Power	Relay Life Reduction

*Recommended Method

Radiation Exposure at High Voltage; Is it A Problem?

High voltage vacuum relays, like any high voltage component, can potentially produce hazardous X-rays when operated above 15 kV. However, KILOVAC gas-filled high voltage relays can be operated safely at very high voltages without any concern for X-rays. Gas-filled relays cannot produce X-rays because the electrons collide with the gas molecules and are unable to accumulate sufficient energy to make significant radiation.

Many KILOVAC relays rated for use above 15 kV are gas-filled relays and, whenever possible, we recommend you use one of these. If a vacuum relay must be used, then it, or the equipment it's in, should be shielded with lead which is at least .062 inches thick. If shielding is not possible, then appropriate warnings of the potential for X-ray exposure must be posted and a radiation monitoring program implemented. Contact your local health agency for more information.

Relay Application Notes (Continued)

Power Conservation Schemes

Quite often in space, aircraft, or battery operated applications it is important to minimize relay power consumption either to conserve power or to minimize heating. TE offers three ways to help you reduce the power which must be dedicated to supply the relays.

1. Use a latching relay. Latching relays need only to be pulsed to switch. Power can be removed and the relay will maintain its latched position. If a normally open or normally closed relay must be used, TE has developed a custom hybrid circuit which allows a latching relay to function as a non-latching relay.
2. If a latching relay is not available for your application, TE may be able to incorporate an "energy conserving" circuit in your relay package. This circuit regulates the power provided to the coil, providing full power during relay operation and providing a reduced power level which is adequate for holding the relay contacts in position at other times. An energy conserving circuit such as this must be custom designed for each application and each model relay. Contact the your local TE sales engineer for more information.
3. For failsafe contactors, TE offers electronic economizers for reducing coil power once the contacts are closed. These schemes result in more energetic activation, smaller size contactors, and substantially reduced coil temperature rise.

High Voltage Processing of Vacuum Relays

Although the shelf life of vacuum relays is typically many years, occasionally a relay will show signs of "gassiness" after a relatively short period of non-use. A trace of gas released from its adsorbed state on the internal surface of the relay is usually responsible. Fortunately, this trace can normally be eliminated by the use of the high voltage processing procedure de-scribed below. The need for such processing can be readily determined by a simple, high voltage test just before installing the component in a system, which is good practice for any high voltage component. **It is not necessary to high voltage process gas-filled relays.**

High Voltage Process Procedure

1. Connect a variable high voltage AC or DC power supply in series with a 10 megohm resister, a micrometer, and the relay (with the relay on the ground side of the power supply).

   SPST-NO relay: Process between open contacts.

   SPST-NC relay: Ground the base, energize the coil, and process between open contacts.

   SPDT relay: Connect the base and the NO terminal together, ground the base, and process between open contacts with the coil energized and de-energized.

   DPDT relay: Process each set of contacts in the same manner suggested for a SPDT relay.
2. Immerse the relay in a dielectric fluid for processing. Transformer oil can be used but FLUORINERT FC-77 is cleaner since it evaporates quickly from the relay surface.
3. Raise the voltage slowly. If the peak voltage is made equal to the maximum specified test voltage and less than 5 microamps of current is drawn at this level (or no glow is visible in a darkened room), then the vacuum is "hard" and no further processing is necessary.
4. If a glow occurs at a lower than maximum specified test voltage, hold the voltage just above the glow initiation level until the glow disappears; raise the voltage again to the onset of glow, or until the maximum specified test voltage is reached. If a DC supply is used, reverse the polarity and repeat the process.
5. Processing at levels up to 20% above the maximum specified test voltage may be done. Typical processing times range from one minute to several minutes for very high voltage relays.

WARNING: X-rays are produced during high voltage processing at voltages above 15 kV. See page 16-15 in this catalog for information on the precautions you should take when operating vacuum relays above 15 kV.

FLUORINERT is a trademark of 3M.

Common KILOVAC High Voltage Relay Designs

Hinged Armature Design

This traditional design approach provides high mechanical reliability and is adaptable to a number of contact configurations. The contact is actuated by the movement of the spring-loaded armature when the coil is energized. The coil assembly is external to the vacuum package and readily replaceable.

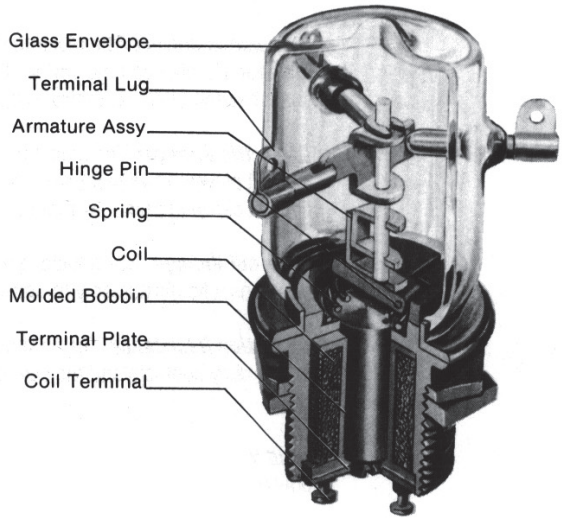

Figure 11

Diaphragm Design

This simple, low-cost design approach makes use of a thin molybdenum diaphragm which allows contact movement to be transferred into the vacuum package from the external motor assembly. This basic design is used in a large number of Kilovac products.

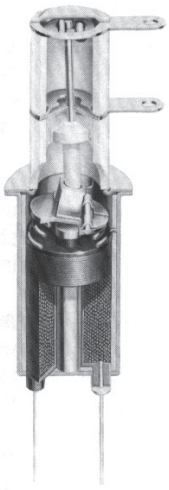

Figure 12

Solenoid Design

When high current loads must be interrupted, the solenoid design provides the force necessary to separate large contacts quickly. It also provides high contact holding force to keep contact resistance low. These attributes make this design the choice for high current DC load switching relays and contactors.

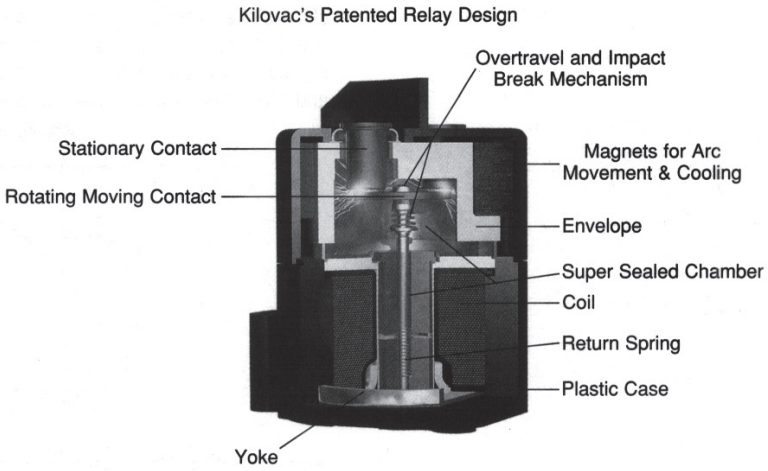

Figure 13.

Definition of Specifications

Bounce Time
The time interval between when the contact first makes, and when the last contact make occurs.

Coil Hi Pot
The minimum voltage which the relay coil terminals will isolate when the relay is properly mounted.

Coil Resistance
The DC resistance, in ohms, of the coil at 25˚C.

Contact Arrangement
Contact arrangements of relays may be one or a combination of the following:

single pole single throw (SPST)
single pole double throw (SPDT)
double pole single throw (DPST)
double pole double throw (DPDT)
3 pole single throw (3PST)
3 pole double throw (3PDT)
four pole double throw (4PDT)

Contact Capacitance
Contact capacitance is measured either between open contacts or between contacts and ground. Measurements are made per MIL-STD-202, Method 305, at 1 kHz.

Contact Form
The contact form of relays may be one or a combination of the following (see page 16-20):

Form A: SPST - Normally Open
Form 3A: 3PST - Normally Open
Form B: SPST - Normally Closed
Form C: SPDT
Form 2C: DPDT
Form 3C: 3PDT
Form 4C: 4PDT
Form K: SPDT Center Off
Form P: SPST - Latching
Form R: SPDT - Latching
Form 3R: 3PDT - Latching
Form X: SPST-NO-Double Make
Form Y: SPST-NC-Double Break
Form Z: SPST NO and SPST NC Double Break/Make
Form ZZ: DPST NO and DPST NC Double Break/Make

Contact Resistance
In vacuum relays, the resistance of closed contacts is measured as voltage drop across contacts carrying 1 amp at 6 Vdc. Measurement is made in accordance with MIL-R-83725, SAE ARD 50031, or MIL-R-6016. In gas-filled relays, 1 amp at 28 Vdc is used to measure contact resistance. “Kelvin” connections should be used to obtain accurate readings.

Contact Voltage Drop
Contact voltage drop is typically measured with the contacts carrying rated current. Measurements are made at the external terminals of the circuit being tested.

Continuous Current
The maximum current that can be carried by the closed contacts of the relay for a sustained time period through the specified operating temperature range.

Dielectric Strength
The maximum allowable Ac rms voltage (50 or 60 Hz) which may be applied between two test points, such as the coil and case or current carrying and non-current carrying points, without a leakage current in excess of 1 milliamp.

Drop-out Voltage
The voltage at which all contacts return to their “normal”, unoperated positions. (Applicable only to non-latching relays.) Unless otherwise noted, maximum drop-out voltage is specified during a continuous current test with a hot coil at maximum temperature. Minimum drop-out voltage is done at minimum temperature.

Insulation Resistance
The minimum allowable DC resistance between two test points, such as the relay contacts and the coil, or contacts and case at a specified voltage, usually 500 Vdc.

Hold Voltage
The lowest voltage that can be applied without any change in state of the contacts from their energized position. This is just above the maximum drop-out voltage.

Leakage Current
The rms current conducted by the output circuit of the relay at maximum rated voltage with the contacts open.

Load Life
The minimum number of cycles the relay will make, carry, and break the specified load without contact sticking or welding, and without exceeding the electrical specifications of the device. Load life is verified through qualification testing.

Load Life, Rated Resistive
The voltage and current encountered by the contacts when opening and/or closing. To be considered a resistive load, the inductance in the test circuit shall not exceed an L/R ratio of 1×10^{-4}. Load ratings are established using various methods including Weibull analysis.

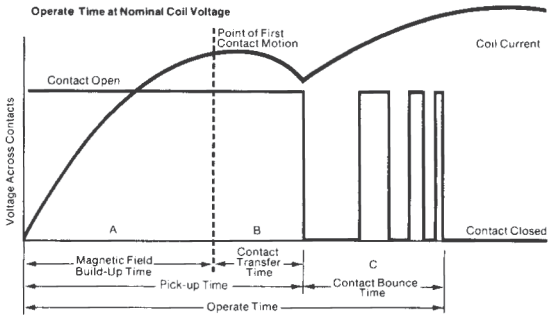

Mechanical Life
This is the number of operations which a relay can be expected to perform while maintaining mechanical integrity. Mechanical life is normally tested with no load or voltage applied to the power contacts and is verified through qualification testing.

Definition of Specifications (Continued)

Operating Temperature Range
The ambient temperature range over which an unmounted relay is specified to operate.

Operate Time
The time interval between the coil energization (nominal coil voltage) and the closing of the normally open contacts. This includes time for the coil to build up its magnetic field (a significant limiting factor) and transfer time of the moveable contact between stationary contact(s), and bounce time after the initial contact make. All KILOVAC relays, except “AP” and “PD” power switching products include bounce time.

Graphic Representation of Operate Time

Overload
The maximum current the relay can make and break for the specified number of operations at the maximum system voltage without contact welding, sticking, or blowing of a 1 amp fuse connected between the case and load system ground.

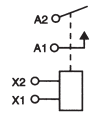

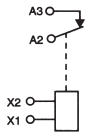

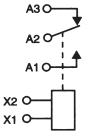

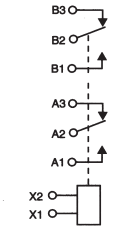

Pick-Up Voltage
The voltage at which normally open contacts close and/or normally closed contacts open. Pick-up voltage increases as coil temperature rises. Unless otherwise specified, pick-up voltage is specified during a continuous current test with a hot coil at maximum temperature.

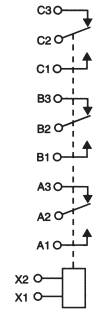

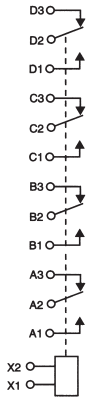

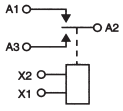

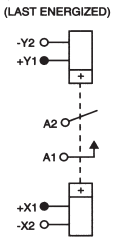

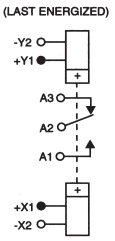

Release Time
The time interval between de-energizing of the coil and the relay returning to normal de-energized position.

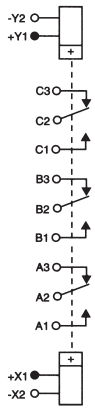

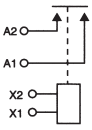

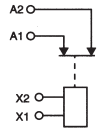

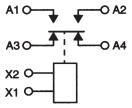

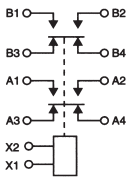

Shock
Shock tests determine what acceleration a relay can sustain without normally closed contacts opening or normally open contacts closing. The shock pulse is typically an 11 millisecond, 1/2 sine pulse. Contacts are monitored for chatter in excess of 10 microseconds and no transfer.

Vibration
The maximum acceleration over the frequency range which the relay can withstand without impairing operation or causing contact chatter of more than 10 microseconds or contact transfer.

Contact Configurations

Form A	Form 3A	Form B	Form C	Form 2C
SPST-NO (make)	3PST-NO	SPST-NC (break)	SPDT (break-make)	DPDT (break-make)
