## **NTE74LS365A** **Integrated Circuit** **TTL – Hex Bus Driver with 3–State Outputs**

### **Description:**

The NTE74LS365A is a hex bus driver in a 16–Lead plastic DIP type package designed specifically to improve both the performance and density of three–state memory address drivers, clock drivers, and bus oriented receivers and transmitters. The designer has a choice of selected combinations of inverting and non–inverting outputs, symmetrical  $\overline{G}$  (active–low control) inputs.

This device features high fan–out, improved fan–in, and can be used to drive terminated lines down to 133 ohms.

### **Features:**

- 3–State Outputs Drive Bus Lines or Buffer Memory Address Registers
- Non–Inverting Outputs

### **Absolute Maximum Ratings:** (Note 1)

Supply Voltage,  $V_{CC}$  ..... 7V  
DC Input Voltage,  $V_{IN}$  ..... 7V  
Voltage Applied to Disable 3–State Output ..... 5.5V  
Operating Temperature Range,  $T_A$  ..... 0°C to +70°C  
Storage Temperature Range,  $T_{stg}$  ..... –65°C to +150°C

Note 1. Unless otherwise specified, all voltages are referenced to GND.

### **Recommended Operating Conditions:**

| Parameter                   | Symbol   | Min  | Typ | Max  | Unit |
|-----------------------------|----------|------|-----|------|------|
| Supply Voltage              | $V_{CC}$ | 4.75 | 5.0 | 5.25 | V    |
| High–Level Input Voltage    | $V_{IH}$ | 2    | –   | –    | V    |
| Low–Level Input Voltage     | $V_{IL}$ | –    | –   | 0.8  | V    |
| High–Level Output Current   | $I_{OH}$ | –    | –   | –2.6 | mA   |
| Low–Level Output Current    | $I_{OL}$ | –    | –   | 24   | mA   |
| Operating Temperature Range | $T_A$    | 0    | –   | +70  | °C   |

**Electrical Characteristics:** (Note 2, Note 3)

| Parameter                           | Symbol          | Test Conditions                                                                           |                        | Min | Typ  | Max  | Unit |
|-------------------------------------|-----------------|-------------------------------------------------------------------------------------------|------------------------|-----|------|------|------|
| Input Clamp Voltage                 | V <sub>IK</sub> | V <sub>CC</sub> = MIN, I <sub>I</sub> = −18mA                                             |                        | −   | −    | −1.5 | V    |

|                                     |                 | V <sub>CC</sub> = MAX, V <sub>I</sub> = 0.4V                                              |                        | −   | −    | −0.2 | mA   |
| $\overline{G}$ Inputs               |                 |                                                                                           |                        |     |      |      |      |
| Short-Circuit Output Current        | I <sub>OS</sub> | V <sub>CC</sub> = MAX, Note 4                                                             |                        | −40 | −    | −225 | mA   |
| Supply Current                      | I <sub>CC</sub> | V <sub>CC</sub> = MAX, Data Outputs = 0V,<br>Output Controls = 4.5V                       |                        | −   | 14   | 24   | mA   |

Note 2. .For conditions shown as MIN or MAX, use the appropriate value specified under “Recommended Operation Conditions”.

Note 3. All typical values are at  $V_{CC} = 5\text{V}$ ,  $T_A = +25^\circ\text{C}$ .

Note 4. Not more than one output should be shorted at a time, and duration of the short-circuit should not exceed one second.

**Switching Characteristics:** ( $V_{CC} = 5\text{V}$ ,  $T_A = +25^\circ\text{C}$  unless otherwise specified)
